**Construct 3 Game Creation Tips & Techniques** Chak Tin Yu,Hobbypress Gameengines Net,2020-06-06 CONSTRUCT had revolutionized the world of open source 2D game creation, by providing easy drag-and-drop kind of interface for producing complex game logic, all without writing codes and scripts. The goal of this book is to provide starters with rich technical information so the best decision and judgment can be exercised when creating 2D games through CONSTRUCT 3. This is not a step-by-step tutorial. This is also not a guide book kind of overview material. We place our focus on the practical side of game creation - the practical tips and techniques one will definitely need when starting out a game project. We also tell exactly what can and cannot be done with Construct 3 and the kind of performance drawback that can be foreseen when the platform is not fed with the right inputs.

**Constructs** Alejandro Melchor,2002-04-16 Golems wait silently in dungeon corridors, ready to apprehend unwary adventurers who dare defile their former master's sanctum. Shield guardians follow their owners faithfully, interposing themselves between the holder of their amulet and anything that would bring him harm. Homunculi fly forth, powered by their creator's lifeblood into a grotesque mockery of life. All of these are constructs, artificial life forms brought into the world by rituals long secreted away in the corners of occult libraries, in the ruins of mighty magical empires and the personal notes of spellcasters with the curiosity to explore this field of arcane lore. Book jacket.

*Constructing Number* Anderson Norton,Martha W. Alibali,2018-12-17 The book synergizes research on number across two disciplines—mathematics education and psychology. The underlying problem the book addresses is how the brain constructs number. The opening chapter frames the problem in terms of children's activity, including mental and physical actions. Subsequent chapters are organized into sections that address specific domains of number: natural numbers, fractions, and integers. Chapters within each section address ways that children build upon biological primitives (e.g., subitizing) and prior constructs (e.g., counting sequences) to construct number. The book relies on co-authored chapters and commentaries at the end of each section to create dialogue between junior faculty and senior researchers, as well as between psychologists and mathematics educators. The final chapter brings this work together around the framework of children's activity and additional themes that arise in the collective work. The book is aimed to appeal to mathematics educators, mathematics teacher educators, mathematics education researchers, educational psychologists, cognitive psychologists, and developmental psychologists.

**Constructing Clienthood in Social Work and Human Services** Kirsi Juhila,Tarja Poso,Chris Hall,Nigel Parton,2003-07-15 This innovative book explores social work, therapy and counselling as a series of encounters - between clients and human services professionals, social workers, their colleagues and other professionals, and more widely between citizens and the state. Providing a variety of social constructionist perspectives on the idea of the 'client', it presents in-depth discussion of the roles, language and contexts of meetings between social workers and their clients. International contributors present discussion on categorization, analysing identities and reflexive practice. Drawing data from a variety of sources, including meetings, client files and transcribed dialogues with clients, the book employs methods such as conversation and discourse analysis to propose new insights into what it means to be a client of the human services agency. Bringing together a rich variety of data, this volume forms an important contribution to major debates on the nature of social work and counselling. As well as innovative approaches to theory and research, the implications for practice in social work and counselling are discussed. Challenging previously-held notions about clienthood, this book is a useful and thought-provoking resource for social workers, counsellors, policy makers, academics, researchers and students and trainers in social work and counselling.

**Constructing Social Theory** David C. Bell,2009 Constructing Social Theory discusses the nature of social theory and theoretical orientations. Organized by forty-three theoretical orientations in seven domains--exchange, power, adaptation/reinforcement, social bond, altruism, functionalism, and identity--the text includes a tutorial on how to identify an appropriate theoretical orientation and create a theory given a particular research question. Bell separates the theoretical orientation of causal logic from theory itself, illuminating the mechanisms of scientific revolutions where new theoretical orientations are created, and the procedures of normal science, in which theories are developed using the logic of existing theoretical orientations.

*Extensional Constructs in Intensional Type Theory* Martin Hofmann,2012-12-06 Extensional Constructs in Intensional Type Theory presents a novel approach to the treatment of equality in Martin-Loef type theory (a basis for important work in mechanised mathematics and program verification). Martin Hofmann attempts to reconcile the two different ways that type theories deal with identity types. The book will be of interest particularly to researchers with mainly theoretical interests and implementors of type theory based proof assistants, and also fourth year undergraduates who will find it useful as part of an advanced course on type theory.

Constructing Test Items Steven J. Osterlind,2006-04-11 Constructing test items for standardized tests of achievement, ability, and aptitude is a task of enormous importance. The interpretability of a test's scores flows directly from the quality of its items and exercises. Concomitant with score interpretability is the notion that including only carefully crafted items on a test is the primary method by which the skilled test developer reduces unwanted error variance, or errors of measurement, and thereby increases a test score's

reliability. The aim of this entire book is to increase the test constructor's awareness of this source of measurement error, and then to describe methods for identifying and minimizing it during item construction and later review. Persons involved in assessment are keenly aware of the increased attention given to alternative formats for test items in recent years. Yet, in many writers' zeal to be 'curriculum-relevant' or 'authentic' or 'realistic', the items are often developed seemingly without conscious thought to the interpretations that may be garnered from them. This book argues that the format for such alternative items and exercises also requires rigor in their construction and even offers some solutions, as one chapter is devoted to these alternative formats. This book addresses major issues in constructing test items by focusing on four ideas. First, it describes the characteristics and functions of test items. A second feature of this book is the presentation of editorial guidelines for writing test items in all of the commonly used item formats, including constructed-response formats and performance tests. A third aspect of this book is the presentation of methods for determining the quality of test items. Finally, this book presents a compendium of important issues about test items, including procedures for ordering items in a test, ethical and legal concerns over using copyrighted test items, item scoring schemes, computer-generated items and more.

Personal Construct Psychology at 60 Peter Cummins, Harry Procter, David Winter, 2017-08-21 The 60th anniversary of the publication of George Kelly's *The Psychology of Personal Constructs* was marked, in 2015, by the 21st International Congress on Personal Construct Psychology. His two volume work set out personal construct theory as a radical new approach to psychology. Although Kelly was a clinical psychologist, personal construct psychology has had an extraordinarily broad range of influence and application, extending beyond the clinical setting to include areas as diverse as education, organizational and management development, social psychology, the arts, law and politics. It presaged constructivist developments in many spheres of knowledge, and its innovative research methods have been used in a vast number of studies focussed on the exploration of personal and interpersonal meaning. The 21st International Congress was held in the UK at the University of Hertfordshire, forty years after the first such congress. This volume presents contributions by many of the Congress's delegates, whose chapters

reflect the diversity of contemporary applications of personal construct psychology, and the continuing relevance and vitality of Kelly's ideas and methods.

Bauhaus Construct Jeffrey Saletnik, Robin Schuldenfrei, 2013-03-01 Reconsidering the status and meaning of Bauhaus objects in relation to the multiple re-tellings of the school's history, this volume positions art objects of the Bauhaus within the theoretical, artistic, historical, and cultural concerns in which they were produced and received. Contributions from leading scholars writing in the field today – including Frederic J. Schwartz, Magdalena Droste, and Alina Payne – offer an entirely new treatment of the Bauhaus. Issues such as art and design pedagogy, the practice of photography, copyright law, and critical theory are discussed. Through a strong thematic structure, new archival research and innovative methodologies, the questions and subsequent conclusions presented here re-examine the history of the Bauhaus and its continuing legacy. Essential reading for anyone studying the Bauhaus, modern art and design.
