Materials Science of Carbides, Nitrides and Borides Yury G. Gogotsi,R.A. Andrievski,2012-12-06 A survey of current research on a wide range of carbide, nitride and boride materials, covering the general issues relevant to the development and characterisation of a variety of advanced materials. Topics include structure and electronic properties, modeling, processing, high-temperature chemistry, oxidation and corrosion, mechanical behaviour, manufacturing and applications. The volume complements more specialised books on specific materials as well as more general texts on ceramics or hard materials, presenting a survey of materials research as a key to technological development. After decades of research, the materials are being used in electronics, wear resistant, refractory and other applications, but numerous new applications are possible. Roughly equal numbers of papers cover theoretical and experimental research in the general field of materials science of refractory materials. Audience: Researchers and graduate students in materials science and engineering.

Life Cycle Sustainability Assessment (LCSA) Subramanian Senthilkannan Muthu,2021-09-21 Environmental Life Cycle Assessment (ELCA) that was developed about three decades ago demands a broadening of its scope to include lifecycle costing and social aspects of life cycle assessment as well, drawing on the three-pillar or ‘triple bottom line’ model of sustainability, which is the result of the development of the Life Cycle Sustainability Assessment (LCSA). LCSA refers to the evaluation of all environmental, social and economic negative impacts and benefits in decision-making processes towards more sustainable products throughout their life cycle. Combination of environmental and social life cycle assessments along with life cycle costing leads to life cycle sustainability assessment (LCSA). This book highlights various aspects of life cycle sustainability assessment (LCSA).

Challenging the Secret Government Kathryn S. Olmsted,2000-11-09 Just four months after Richard Nixon's resignation, New York Times reporter Seymour Hersh unearthed a new case of government abuse of power: the CIA had launched a domestic spying program of Orwellian proportions against American dissidents during the Vietnam War. The country's best investigative journalists and members of Congress quickly mobilized to probe a scandal that seemed certain to rock the foundations of this secret government. Subsequent investigations disclosed that the CIA had plotted to kill foreign leaders and that the FBI had harassed civil rights and student groups. Some called the scandal 'son of Watergate.' Many observers predicted that the investigations would lead to far-reaching changes in the intelligence agencies. Yet, as Kathryn Olmsted shows, neither the media nor Congress pressed for reforms. For all of its post-Watergate zeal, the press hesitated to break its long tradition of deference in national security coverage. Congress, too, was unwilling to challenge the executive branch in national security matters. Reports of the demise of the executive branch were greatly exaggerated, and the result of the 'year of intelligence' was a return to the status quo. American History/Journalism

Mechanical Self-Assembly Xi Chen,2012-12-15 Mechanical Self-Assembly: Science and Applications introduces a novel category of self-assembly driven by mechanical forces. This book discusses self-assembly in various types of small material structures including thin films, surfaces, and micro- and nano-wires, as well as the practice's potential application in micro and nanoelectronics, MEMS/NEMS, and biomedical engineering. The mechanical self-assembly process is inherently quick, simple, and cost-effective, as well as accessible to a large number of materials, such as curved surfaces for forming three-dimensional small structures. Mechanical self-assembly is complementary to, and sometimes offer advantages over, the traditional micro- and nano-fabrication.

Social Capital Partha Dasgupta,Ismail Serageldin,2000 This book contains a number of papers presented at a workshop organised by the World Bank in 1997 on the theme of 'Social Capital: Integrating the Economist's and the Sociologist's Perspectives'. The concept of 'social capital' is considered through a number of theoretical and empirical studies which discuss its analytical foundations, as well as institutional and statistical analyses of the concept. It includes the classic 1987 article by the late James Coleman, 'Social Capital in the Creation of Human Capital', which formed the basis for the development of social capital as an organising concept in the social sciences.

Modular Forms and Hecke Operators A. N. Andrianov,V. G. Zhuravlev ,2016-01-29 he concept of Hecke operators was so simple and natural that, soon after Hecke's work, scholars made the attempt to develop a Hecke theory for modular forms, such as Siegel modular forms. As this theory developed, the Hecke operators on spaces of modular forms in several variables were found to have arithmetic meaning. Specifically, the theory provided a framework for discovering certain multiplicative properties of the number of integer representations of quadratic forms by quadratic forms. Now that the theory has matured, the time is right for this detailed and systematic exposition of its fundamental methods and results. Features: The book starts with the basics and ends with the latest results, explaining the current status of the theory of Hecke operators on spaces of holomorphic modular forms of integer and half-integer weight congruence-subgroups of integral symplectic groups.Hecke operators are considered principally as an instrument for studying the multiplicative properties of the Fourier coefficients of modular forms. It is the authors' intent that Modular Forms and Hecke Operators help attract young researchers to this beautiful and mysterious realm of number theory.

Medieval Manuscripts for Mass and Office Andrew Hughes,1995-01-01 Many books discuss the theology and doctrine of the medieval liturgy: there is no dearth of information on the history of the liturgy, the structure and development of individual services, and there is much discussion of specific texts, chants, and services. No book, at least in English, has struggled with the difficulties of finding texts, chants, or other material in the liturgical manuscripts themselves, until the publication of Medieval Manuscripts for Mass and Office in 1982. Encompassing a period of several centuries, ca 1200-1500, this book provides solutions for such endeavours. Although by this period the basic order and content of liturgical books were more or less standardized, there existed hundreds of different methods of dealing with the internal organisation and the actual writing of the texts and chants on the page. Generalization becomes problematic; the use of any single source as a typical example for more than local detail is impossible. Taking for granted the user's ability to read medieval scripts, and some codicological knowledge, Hughes begins with the elementary material without which the user could not proceed. He describes the liturgical year, season, day, service, and the form of individual items such as responsory or lesson, and mentions the many variants in terminology that are to be found in the sources. The presentation of individual text and chant is discussed, with an emphasis on the organisation of the individual column, line, and letter. Hughes examines the hitherto unexplored means by which a hierarchy of initial and capital letters and their colours are used by the scribes and how this hierarchy

can provide a means by which the modern researcher can navigate through the manuscripts. Also described in great detail are the structure and contents of Breviaries, Missals, and the corresponding books with music. This new edition updates the bibliography and the new preface by Hughes presents his recent thoughts about terminology and methods of liturgical abbreviation.

Eaters of the Dead Michael Crichton,2012-05-14 From the bestselling author of Jurassic Park, Timeline, and Sphere comes an epic tale of unspeakable horror. It is 922 A.D. The refined Arab courtier Ibn Fadlan is accompanying a party of Viking warriors back to their home. He is appalled by their customs—the gratuitous sexuality of their women, their disregard for cleanliness, and their cold-blooded sacrifices. As they enter the frozen, forbidden landscape of the North—where the day’s length does not equal the night’s, where after sunset the sky burns in streaks of color—Fadlan soon discovers that he has been unwillingly enlisted to combat the terrors in the night that come to slaughter the Vikings, the monsters of the mist that devour human flesh. But just how he will do it, Fadlan has no idea.
