Rac(e)ing to the Right George Samuel Schuyler,2001 Rac(e)ing to the Right is a great read and brings overdue attention to one of the most popular and controversial African American writers in history. . . . These writings reveal both the presence and the limits of conservatism in the African American intellectual tradition.-- Jeffrey A. Tucker, University of Rochester From the 1920s to the 1970s, George S. Schuyler was one of the country's most prolific--and controversial--observers of African American life. As journalist, socialist, novelist, right-wing conservative, and, finally, political outcast, his thought was rife with insight and contradiction. Until now, only Schuyler's fiction has found its way back into print. Rac(e)ing to the Right is the first collection of his political and cultural criticism. The essays gathered by Jeffrey Leak encompass three key periods of Schuyler's development. The first section follows his literary evolution in the 1920s and 1930s, during which time he deserted the U.S. Army and briefly became a member of the Socialist Party. Part II reveals his shift toward political conservatism in response to World War II and the perceived threat of Communism. Part III covers the civil rights movement of the 1960s--an era that prompted some of his most extreme and volatile critiques of black leadership and liberal ideology. The book includes many essays that are not well known as well as pieces that have never before been published. One notable example is the first printed transcript of Schuyler's 1961 debate on the Black Muslims with Malcolm X, James Baldwin, and C. Eric Lincoln. Because African American experience is more often than not associated with liberalism and the left, the idea of a black conservative strikes many as an anomaly. Schuyler's writings, however, force us to broaden and rethink our political and cultural conceptions. At times misguided, at times prophetic, his work expands our understanding of black intellectual thought in the twentieth century. The Editor: Jeffrey B. Leak is assistant professor of African American literature at the University of North Carolina at Charlotte. He has published articles and reviews in Callaloo, African American Review, and The Oxford Companion to African American Literature.

The Hsi-Yu-Chi Glen Dudbridge,Shaw Professor of Chinese Glen Dudbridge,1970-09-02 A study of the early versions of the classic Chinese novel known to readers in English as Monkey. Dr Dudbridge examines a long tradition of earlier versions in narrative and dramatic form through which the great episodic cycle slowly took shape. The two main fields of interest are popular culture and folklore and the development of Chinese vernacular literature. Dr Dudbridge provides a very thorough survey of present knowledge about the whole topic and discusses critically a good deal of theorising about it. This is a study for experts. It uses Chinese characters, both in text pages and in the bibliography, which is very extensive. The plates reproduce paintings, carvings and sections of text relevant to the tradition.

Foreign Compound Metabolism in Mammals D E Hathway,2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Performing China Chi-ming Yang,2011-11 The fascinating premise of this study is that the Chinese influenced English concepts of virtue in the 18th century. Through analysis of plays, fiction, and a lecture tour (by an imposter pretending to be a converted heathen), Yang (English, U. of Pennsylvania) examines the interpretation of China's history, ethic, and cultural accomplishments in English culture and thought. Impressive in the range of examples of English, European, and Chinese writing and culture, the study defines English notions of non-European peoples and culture as well as its concept of China's, making this work of interest to a broad readership. Controlled Release, Biochemical Effects of Pesticides, Inhibition of Plant Pathogenic Fungi ,2012-12-06 Since the middle of the Sixties, new types of formulation for biologically active compounds have been developed, which have been introduced into the literature under the term Controlled Release Formulations (CRF). Stimulated by

results from former and successful pharmaceutical research, which was engaged in the production of preparations with protracted effects (introduction onto the market in the year 1952 of D amphetamine in the form of pellets, coated to varying degrees with fats and waxes) 1), experiments were carried out to transfer the prolongation of effectiveness to pesticidal substances also, by means of a depot formulation. Initial work was concerned with the production of protective coatings for sonar systems in marine ecosystems. By means of antifouling paints or rubber coatings containing tri-n-butyl-tin oxide (TBT0), the growth of marine organisms on sonar domes, buoys and hulls in the water could be effectively prevented 2. 3). Controlled release formulations of pesticides are defined as depot systems which continuously release their toxic constituents into the environment over a specified period of time (usually months to years) 4). According to this definition, such formulations can be successfully employed where a chronic exposure to biologically active compounds is required over a longer period. The following hypothetical example is intended to illustrate this 5). In Fig. 1, the duration of activity of a non-persistent pesticide with a loss rate under environmental conditions of $t_{1/2} = 15$ days, is graphically illustrated.

Models of Seizures and Epilepsy Asla Pitkänen, Philip A. Schwartzkroin, Solomon L. Moshé, 2005-10-04 An understanding of mechanisms underlying seizure disorders depends critically on the insights provided by model systems. In particular with the development of cellular, molecular, and genetic investigative tools, there has been an explosion of basic epilepsy research. Models of Seizures and Epilepsy brings together, for the first time in 30 years, an overview of the most widely-used models of seizures and epilepsy. Chapters cover a broad range of experimental approaches (from in vitro to whole animal preparations), a variety of epileptiform phenomenology (including burst discharges and seizures), and suggestions for model characterization and validation, such as electrographic, morphologic, pharmacologic, and behavioral features. Experts in the field provide not only technical reviews of these models but also conceptual critiques - commenting on the strengths and limitations of these models, their relationship to clinical phenomenology, and their value in developing a better understanding and treatments. Models of Seizures and Epilepsy is a valuable, practical reference for investigators who are searching for the most appropriate laboratory models for addressing key questions in the field. It also provides an important background for physicians, fellows, and students, offering insight into the potential for advances in epilepsy research. The first comprehensive description of animal models of epilepsy since the early 1970's Comprehensive analysis of What the models model to guide the selection of each model, and what specific questions it will answer Elegant examples of the use of novel technologies that can be applied in experimental epilepsy research World expert opinions on the clinical relevance of each model

Neurobiology of Mental Illness Dennis S. Charney, Eric J. Nestler, 2011-05-20 This is a new edition of the first comprehensive text to show how the advances in molecular and cellular biology and in the basic neurosciences have brought the revolution in molecular medicine to the field of psychiatry. The book begins with a review of basic neuroscience and methods for studying neurobiology in human patients then proceeds to discussions of all major psychiatric syndromes with respect to knowledge of their etiology, pathophysiology, and treatment. Emphasis is placed on synthesizing information across numerous levels of analysis, including molecular biology and genetics, cellular physiology, neuroanatomy, neuropharmacology, and behavior, and in translating information from the basic laboratory to the clinical laboratory and finally to clinical treatment. Editors Dennis Charney and Eric Nestle, along with their six section editors and over 150 contributors, have revised and updated all 80 chapters from the previous edition and have added new chapters on topics relating to, for example, genetics, experimental therapeutics, and late-life mood disorders.
