[Geography and Ownership as Bases for Economic Accounting](#) Robert E. Baldwin,Robert E. Lipsey,David Richardson,1998-10-15 Geography and Ownership as Bases for Economic Accounting provides a forum for leading specialists in trade and international economics to explore whether changes in the world economy have increased the usefulness of international accounts drawn up on the basis of ownership rather than on geography. The papers in this volume suggest that ownership-based national accounts are helpful in understanding trade and financial transactions among globalized enterprises. Individual chapters emphasize this perspective through accounting exercises, studies of individual countries, and studies of foreign direct investment and its relation to national economies. This volume gives trade and international economists the data and resources to renew discussion of this timely issue.

[Health Technology Assessment of Assistance Dogs and Dog-Assisted Interventions](#) Martina Lundqvist,2020-09-04 Dogs as an assistive aid for people with disabilities date as far back in time as the first century CE. Today, dogs are used in various settings to help and assist humans. ‘Assistance dogs’ is an umbrella term for guide dogs, hearing dogs and service dogs. They are custom trained to help and support their owners in their everyday life and thereby give them greater independence. Dogs who perform dog-assisted interventions are another type of working dog, where the dog and the owner work together as a team visiting people with various needs in different settings such as hospitals and nursing homes. These visits aim to strengthen people’s inner motivation, using the dog as an external motivator. There is a lack of evaluations of working dogs in the health technology assessment context, and in the health economic evaluation context. Hence, there is a need for structured analyses that include both the short and long-term effects and the costs of assistance dogs and dog-assisted interventions. The overall aim of this thesis is to explore and assess the use of assistance dogs and dog-assisted interventions. The research questions were investigated using a variety of methods. In paper I, inferential statistical analysis was used to analyse patient-reported outcomes measures. In paper II, a thematic content analysis was employed to explore the experiences of service and hearing dogs. To study the long-term cost-effectiveness of physical service dogs and diabetes alert dogs, a decision analytic model was used in paper III. The input data in studies I, II, and III was obtained from the Service and Hearing Dog Project. In paper III, the data was also supplemented with information from published literature and expert opinions. Paper IV investigated the effects and cost-effectiveness of dog-assisted interventions, and takes the form of a systematic review. Paper I showed that a service or hearing dog may have positive impact on its owner’s health-related quality of life, well-being and activity level. Paper II showed that owners of service or hearing dogs experienced both positive physical and psychosocial effects from their dog. Negative experiences were also identified, for example being denied access to public places and negative attitudes from other people. Paper III showed that physical service dogs and diabetes alert dogs are cost-effective in comparison with regular companion dogs, resulting in both lower costs and a gain in QALYs. The one-way sensitivity analysis did not change the results, but the probabilistic sensitivity analysis showed that the results were uncertain. Synthesizing the results from the review in paper IV showed that dog-assisted interventions for therapeutic purposes led to minor to moderate effects in psychiatric conditions. Dog-assisted interventions as an activity had minor to moderate effects on cognitive disorders, and dog-assisted interventions for support purposes were beneficial in different types of medical interventions. Studies of cost-effectiveness were lacking. To conclude, assistance dogs are valuable and may be cost-effective for use as assistive aids and dog-assisted interventions render minor to moderate effects in certain situations in healthcare settings. Användning av hundar som hjälpmedel för personer med funktionsnedsättning är ett sätt som kan bidra till att förbättra livskvaliteten för personer med funktionsnedsättning. Hundar som används för att hjälpa personer med funktionsnedsättning kan ha en positiv inverkan på deras livskvalitet, välbefinnande och aktivitetsnivå. Resultaten från de tematiska analyserna i studie II visar att det finns en positiv inverkan på livskvaliteten för personer med funktionsnedsättning som använder hundar. Negativa erfarenheter av hunden identifierades också, till exempel att hunden begränsade synligheten och andra personers negativa attityder. Studie III visar att fysiska servicehundar och alarmerande diabeteshundar kan ha en positiv inverkan på livskvaliteten för personer med funktionsnedsättning och alarmerande diabeteshundar kan ha en positiv inverkan på livskvaliteten för personer med funktionsnedsättning. Resultaten från den systematiska litteraturen visar att hundassistenterade interventioner som ges i terapeutiskt syfte hade små till måttliga effekter vid psykiatriska tillstånd. Hundassistenterade aktiviteter hade små till måttliga effekter vid kognitiva störningar och hundassistenterade interventioner som gavs som stöd vid olika typer av medicinska insatser var frödelaktiga. Studier gällande kostnadseffektivitet av hundassistenterade interventioner saknades. Sammanfattningsvis, assistanshundar som används för att hjälpa personer med funktionsnedsättning ger positiva effekter i flera dimensioner för sina ägare och för sannolikt kostnadseffektiva. Hundassistenterade interventioner uppvisar små till måttliga effekter i vissa situationer i hem- och sjukvården.
