Mobile Marketing Management Hongbing Hua,2019-03-18 With the development of mobile internet technology, people's lifestyle and consumer behavior are changing rapidly. Nowadays, the products on the market are updating more and more frequently, and the traditional marketing theory and brand theory fail to get with the mobile internet. So, what's the innovative marketing to take in the new era? Since 2012, China has entered into the mobile era, and became a major country of mobile internet application. The book summarizes the experience of the author accumulated from many trials and errors in management and marketing innovation, so as to form the pattern of management and marketing for the next 30 years. Mobile Marketing Management lays the foundation for the new era with four pillars: service, substance, superuser, space, known as 4S theory for short. In view of the concept of customer-first, it is all about service, and products become productized service concepts. In view of the failure of mass communication, the competition among all services becomes the competition of substance differentiation. Regarding the popularity of self-organization, it becomes a trend to cooperate with people rather than the company to develop the market. In view of the principle of fuzzy market boundary, the enterprises shall optimize their living space and evolve their development space. This book contains numerous case studies along with analysis and creates the discipline of mobile marketing management, providing innovative theories, methods and tools for the marketing of enterprises. Through this book, readers can master the marketing methods of the mobile internet era. They can apply the marketing theory in this book to guide the marketing practice, thus improving marketing efficiency and reducing marketing costs.

Experiments in Plant Hybridisation Gregor Mendel,2008-11-01 Experiments which in previous years were made with ornamental plants have already afforded evidence that the hybrids, as a rule, are not exactly intermediate between the parental species. With some of the more striking characters, those, for instance, which relate to the form and size of the leaves, the pubescence of the several parts, etc., the intermediate, indeed, is nearly always to be seen; in other cases, however, one of the two parental characters is so preponderant that it is difficult, or quite impossible, to detect the other in the hybrid. from 4. The Forms of the Hybrid One of the most influential and important scientific works ever written, the 1865 paper Experiments in Plant Hybridisation was all but ignored in its day, and its author, Austrian priest and scientist GREGOR JOHANN MENDEL (1822-1884), died before seeing the dramatic long-term impact of his work, which was rediscovered at the turn of the 20th century and is now considered foundational to modern genetics. A simple, eloquent description of his 1856-1863 study of the inheritance of traits in pea plants Mendel analyzed 29,000 of them this is essential reading for biology students and readers of science history. Cosimo presents this compact edition from the 1909 translation by British geneticist WILLIAM BATESON (1861-1926).

How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide Alan Wang,2020-11-13 This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. Table of Contents Introduction Section One: Windows Configuration Chapter 1: AlwaysInstallElevated Section Two: Domain Controller Chapter 2: ZeroLogon Section Three: Windows Service Chapter 3: Service - Insecure File Permission Chapter 4: Service - Unquoted Path Chapter 5: Service - Bin Path Chapter 6: Service - Registry Chapter 7: Service - DLL Hijacking Section Four: Scheduled Tasks Chapter 8: Scheduled Tasks Section Five: Windows Registry Chapter 9: Autorun Chapter 10: Startup Applications Section Six: Windows Kernel Chapter 11: Kernel - EternalBlue Chapter 12: Kernel - MS15-051 Chapter 13: Kernel - MS14-058 Section Seven: Potato Exploits Chapter 14: Juicy Potato Chapter 15: Rogue Potato Section Eight: Password Mining Chapter 16: Password Mining - Memory Chapter 17: Password Mining - Registry Chapter 18: Password Mining - SiteList Chapter 19: Password Mining - Unattended Chapter 20: Password Mining - Web.config Section Nine: UAC Bypass Chapter 21: User Account Control Bypass For more information, please visit <http://www.howtopassoscp.com/>.

Multicopter Design and Control Practice Quan Quan,Xunhua Dai,Shuai Wang,2020-04-17 As the sister book to "Introduction to Multicopter Design and Control," published by Springer in 2017, this book focuses on using a practical process to help readers to deepen their understanding of multicopter design and control. Novel tools with tutorials on multicopters are presented, which can help readers move from theory to practice. Experiments presented in this book employ: (1) The most widely-used flight platform - multicopters - as a flight platform; (2) The most widely-used flight pilot hardware - Pixhawk - as a control platform; and (3) One of the most widely-used programming languages in the field of control engineering - MATLAB + Simulink - as a programming language. Based on the current advanced development concept Model-Based Design (MBD) process, the three aspects mentioned above are closely linked. Each experiment is implemented in MATLAB and Simulink, and the numerical simulation test is carried out on a built simulation platform. Readers can upload the controller to the Pixhawk autopilot using automatic code generation technology and form a closed loop with a given real-time simulator for Hardware-In-the-Loop (HIL) testing. After that, the actual flight with the Pixhawk autopilot can be performed. This is by far the most complete and clear guide to modern drone fundamentals I've seen. It covers every element of these advanced aerial robots and walks through examples and tutorials based on the industry's leading open-source software and tools. Read this book, and you'll be well prepared to work at the leading edge of this exciting new industry. Chris Anderson, CEO 3DR and Chairman, the Linux Foundation's Dronecode Project The development of a multicopter and its applications is very challenging in the robotics area due to the multidomain knowledge involved. This book systematically addresses the design, simulation and implementation of multicopters with the industrial leading workflow - Model-Based Design, commonly used in the automotive and aero-defense industries. With this book, researchers and engineers can seamlessly apply the concepts, workflows, and tools in other engineering areas, especially robot design and robotics application development. Dr. Yanliang Zhang, Founder of Weston Robot, EX-product Manager of Robotics System Toolbox at the MathWorks

Recombinant Human Erythropoietin (rhEPO) in Clinical Oncology Mohammad Resa Nowrouzian,2010-06-14 Anemia, a frequent complication of cancer and its treatments, produces unwanted symptoms and significantly impairs metabolic and physiologic functions, as well as patients' activity, quality of life and even life expectancy. In its new Second Edition, this book presents current knowledge on anemia in cancer and its treatment with Recombinant Human Erythropoietin (rhEPO). Expanded, updated and newly added chapters describe scientific and clinical aspects of anemia, and give diagnostic and therapeutic recommendations on use of rhEPO. This is an essential source of information for radiotherapists, medical oncologists, hematologists, internists, pediatricians, surgeons, specialists in transfusion and laboratory medicine, and pharmacologists.

Hypothalamic-pituitary Development Raphaël Rappaport,Serge Amselem,2001-01-01 In recent years dramatic progress has been made in understanding the pathophysiology of pituitary diseases by a combination of experimental studies, molecular genetics and clinical research. This book presents an updated overview of normal and pathological hypothalamic-pituitary development. Several chapters include experimental data and describe brain and facial defects associated with various conditions of pituitary insufficiency. A major part is devoted to the still increasing number of molecular and genetic defects which are responsible for various clinical presentations of pituitary insufficiency: diseases due to genetic defects of growth hormone, TSH, gonadotropins and corticotropin secretion are extensively described. These diseases present as metabolic (diabetes insipidus and adrenal insufficiency), growth and reproductive (including puberty) disorders. A distinct chapter emphasizes the contribution of a multidisciplinary comprehensive approach including the most recent molecular and genetic tools. Finally in most chapters an effort was made to address phenotypic and genotypic presentations in affected patients including valuable information provided by magnetic resonance imaging of the pituitary and brain. This book will help endocrinologists and paediatricians by providing unique models of genetic and developmental defects of the pituitary region which bear ultimate consequences on metabolic

control, growth and reproduction.

Embedded Signal Processing with the Micro Signal Architecture Woon-Seng Gan, Sen M. Kuo, 2007-02-26 This is a real-time digital signal processing textbook using the latest embedded Blackfin processor Analog Devices, Inc (ADI). 20% of the text is dedicated to general real-time signal processing principles. The remaining text provides an overview of the Blackfin processor, its programming, applications, and hands-on exercises for users. With all the practical examples given to expedite the learning development of Blackfin processors, the textbook doubles as a ready-to-use user's guide. The book is based on a step-by-step approach in which readers are first introduced to the DSP systems and concepts. Although, basic DSP concepts are introduced to allow easy referencing, readers are recommended to complete a basic course on Signals and Systems before attempting to use this book. This is also the first textbook that illustrates graphical programming for embedded processor using the latest LabVIEW Embedded Module for the ADI Blackfin Processors. A solutions manual is available for adopters of the book from the Wiley editorial department.

Philosophy of Communication Brian G. Chang, Garnet C. Butchart, 2012-08-10 Classical, modern, and contemporary philosophical writings that address the fundamental concepts of communication. To philosophize is to communicate philosophically. From its inception, philosophy has communicated forcefully. Socrates, Plato, and Aristotle talk a lot, and talk ardently. Because philosophy and communication have belonged together from the beginning—and because philosophy comes into its own and solidifies its stance through communication—it is logical that we subject communication to philosophical investigation. This collection of key works of classical, modern, and contemporary philosophers brings communication back into philosophy's orbit. It is the first anthology to gather in a single volume foundational works that address the core questions, concepts, and problems of communication in philosophical terms. The editors have chosen thirty-two selections from the work of Plato, Leibniz, Hegel, Husserl, Heidegger, Wittgenstein, Benjamin, Lacan, Derrida, Sloterdijk, and others. They have organized these texts thematically, rather than historically, in seven sections: consciousness; intersubjective understanding; language; writing and context; difference and subjectivity; gift and exchange; and communicability and community. Taken together, these texts not only lay the foundation for establishing communication as a distinct philosophical topic but also provide an outline of what philosophy of communication might look like.

Endocrine Immunology W. Savino, F. Guaraldi, 2017-02-28 In the last decades, several in vitro and in vivo studies have revealed the existence of a very complex network between the neuroendocrine and immune system. Important molecular mechanisms underlying these interactions, in both physiological and pathological conditions, have also been described. Indeed, hormones play a pivotal role in the development and functional regulation of the immune system – both innate and acquired responses. Immune system cells present specific hormone receptors and themselves produce some hormones, thus influencing hormone secretion. More recently, the modulation of hormone secretion has been attempted for treating associated autoimmune disorders, further supporting the strong interplay between the endocrine and immune system. Distinguished experts, who have published extensively in their fields, have contributed comprehensive chapters to this volume. The focus is on the various aspects of endocrine-neuro-immune connections, providing an updated panorama - from basics to clinical applications - of current knowledge and still debated issues.

Sports Endocrinology F. Lanfranco, C.J. Strasburger, 2016-06-28 This book is an up-to-date, extensive overview of the effects of physical activity and training on endocrine function. It gives insights into a complex relationship by describing effects with respect to exercise performance, growth, development, and ageing. It includes discussions of the endocrine response depending on exercise mode, intensity, and duration as well as on gender, age, and fitness level. Additionally the book deals with the impact of environmental and psychological factors on endocrine level. A substantial part of Sports Endocrinology is devoted to the 'hot topic' of hormonal doping in sports. The properties of androgens, growth hormone, erythropoietin, and dietary supplements are highlighted. The use and abuse among professional and recreational athletes is discussed and specific methods of detection are presented and explained. All contributors are well-known experts in sports medicine and endocrinology, endocrine physiology, pharmacology, and doping detection, so this book is a must-read for every professional involved in the field.

Cell Kinetics of the Inflammatory Reaction Olav H. Iversen, 2012-02-12 The European Study Group for Cell Proliferation held its XVth Meeting at Sundvolden, Norway, in September 1987. The program included a symposium on the cell kinetics of the inflammatory reaction, with invited speakers. This volume of Current Topics in Pathology contains the manuscripts submitted by the speakers. Inflammation is a very broad area, and the cell kinetics of the inflammatory reaction comprises a large number of topics. A full coverage would fill more than one book. This volume therefore contains only a few of the important aspects of the cell kinetics of the inflammatory reaction. It is hoped that it will serve as inspiration for further research in this important area. Inflammatory diseases are even more important than cancer, and there is a great need for a more detailed information about inflammation. OLAV HILMAR IVERSEN Contents Chapter I The Cell Kinetics of the Inflammatory Reaction. Introduction and Overview.

Amorphous and Crystalline Silicon Carbide II Mahmud M. Rahman, Cary Y.-W. Yang, Gary L. Harris, 2012-12-06 This volume contains written versions of the papers presented at the Second International Conference on Amorphous and Crystalline Silicon Carbide and Related Materials (ICACSC 1988), which was held at Santa Clara University on December 15 and 16, 1988. The conference followed the First ICACSC held at Howard University, Washington DC, in December 1987 and continued to provide an international forum for discussion and exchange of ideas and results covering the current status of research on SiC and related materials.

ICACSC 1988 attracted 105 participants from five countries. The substantial increase in the number of papers compared with the previous year is an indication of the growing interest in this field. Of the 45 papers presented at the conference, 36 refereed manuscripts are included in this volume, while the remaining 9 appear as abstracts. The six invited papers provide detailed reviews of recent results on amorphous and crystalline silicon carbide materials and devices, as well as diamond thin films. The volume is divided into six parts, each covering an important theme of the conference.

PROBLEM SOLVING WITH C SOMASHEKARA, M. T., GURU, D. S., MANJUNATHA, K. S., 2018-01-01 This self-readable and student-friendly text provides a strong programming foundation to solve problems with C language through its well-supported structured programming methodology, rich set of operators and data types. It is designed to help students build efficient and compact programs. The book, now in its second edition, is an extended version of Dr. M.T. Somashekara's previous book titled as Programming in C. In addition to two newly introduced chapters on 'Graphics using C' and 'Searching and Sorting', all other chapters of the previous edition have been thoroughly revised and updated. The usage of pseudocodes as a problem-solving tool has been explored throughout the book before providing C programming solutions for the problems, wherever necessary. This book comes with an increased number of examples, programs, review questions, programming exercises and interview questions in each chapter. Appendices, glossary, MCQs with answers and solutions to interview questions are given at the end of the book. The book is eminently suitable for students of Computer Science, Computer Applications, and Information Technology at both undergraduate and postgraduate levels. Assuming no previous knowledge of programming techniques, this book is appropriate for all those students who wish to master the C language as a problem-solving tool for application in their respective disciplines. It even caters to the needs of beginners in computer programming. **KEY FEATURES** • Introduction to problem-solving tools like algorithms, flow charts and pseudocodes • Systematic approach to teaching C with simple explanation of each concept • Expanded coverage of arrays, structures, pointers and files • Complete explanation of working of each program with emphasis on the core segment of the program, supported by a large number of solved programs and programming exercises in each chapter **NEW TO THE SECOND EDITION** • Points-wise summary at the end of each chapter • MCQs with Answers • Interview Questions with Solutions • Pseudocodes for all the problems solved using programs • Two new chapters on 'Graphics using C' and 'Searching and Sorting' • Additional review questions and programming exercises
