Multimedia Technologies and Applications for the 21st Century Borko Furht, 1997-11-30 *Multimedia Technologies and Applications for the 21st Century: Visions of World Experts* presents contributions from leading researchers and experts describing their current research and their views of the future trends in the field. The book consists of thirteen chapters in five parts. These chapters tackle a number of critical issues in distributed multimedia systems and applications - from VLSI processors that support multimedia and multimedia servers, through multimedia databases and multimedia networks and communications, to merging multimedia applications. Only a few years ago multimedia seemed like a brand new research field and an emerging new industry. Today, at the edge of the 21st century, multimedia research is coming of age, and the multimedia industry has significantly grown with the total market estimated to be about \$50 billion. Several years ago it was felt that the digital media revolution had just started; however, the seeds had been sown long before. Fundamental technologies, such as interactive laser disks, video games, and electronic encyclopedias were invented in the 1970s and 80s. They represented the seeds for current 'hot' applications, such as digital libraries, video-on-demand, interactive television, and videoconferencing. Another aspect of the digital media revolution is the formation of a new media industry composed of computer, entertainment, communication, and consumer electronics companies. Many industry segments are currently involved in creating new products and services, positioning themselves for the 21st century. They include telephone, cable, and satellite TV companies, communication equipment companies, TV and radio broadcasters, on-line Internet service providers, cable channels, movie studios, record companies, book publishers, CD-ROM title creators, Internet tool vendors, multimedia software tools companies, computer companies, general software tools companies, computer add-on vendors, semiconductor vendors, and consumer electronics vendors. *Multimedia Technologies and Applications for the 21st Century: Visions of World Experts* should stimulate the curiosity of its readers and inspire new technological breakthroughs in this exciting field. It serves as a valuable reference for system designers, engineers, programmers, and managers who are involved in multimedia systems, the Internet, and their applications. This book can also be used as a textbook for advanced courses on multimedia in engineering curricula.

21st IEEE Conference on Local Computer Networks ,1996 Papers from the October 1996 conference concentrate on current issues such as congestion control and recovery, internetworking, mobile networks, and Internet enhancements, as well as changing definitions of LANs and the scope of LAN technology. Contains sections on high-speed networks, multimedia communications, ATM networks, communication protocols, real-time networks, multicast communications, network analysis, network controls, optical controls, and mobile communications. Subjects include modeling and regulation of host traffic in ATM networks, and a hierarchical network storage architecture for video-on-demand services. No index. KI 2008: Advances in Artificial Intelligence Andreas Dengel, Karsten Berns, Thomas Breuel, Frank Bomarius, Thomas R. Roth-Berghofer, 2008-09-24 KI 2008 was the 31st Annual German Conference on Artificial Intelligence held September 23–26 at the University of Kaiserslautern and the German Research Center for Artificial Intelligence DFKI GmbH in Kaiserslautern, Germany. The conference series started in 1975 with the German Workshop on AI (GWAI), which took place in Bonn, and represents the first forum of its type for the German AI Community. Over the years AI has become a major field in computer science in Germany involving a number of successful projects that received much international attention. Today KI conferences are international forums where participants from academia and industry from all over the world meet to exchange their recent research results and to discuss trends in the field. Since 1993 the meeting has been called the “Annual German Conference on Artificial Intelligence,” designated by the German acronym KI. This volume contains the papers selected out of 77 submissions, including a number of submissions from outside German-speaking countries. In total, 15 submissions (19%) were accepted for oral and 30 (39%) for poster presentation. Oral presentations at the conference were in single track. Because of this, the choice of presentation form (oral, poster) was based on how well reviews indicated that the paper would fit into one or the other format. The proceedings allocate the same space to both types of papers. In addition, we selected six papers that show high application potential - describing systems or prototypical implementations of innovative AI technologies. They are also included in this volume as two-page extended abstracts.

Car PC Hacks Damien Stolarz, 2005-07-27 A car PC or carputer is a car tricked-out with electronics for playing radio, music and DVD movies, connecting to the Internet, navigating and tracking with satellite, taking photos, and any electronic gadget a person wants in a car. All these devices are managed and controlled through a single screen or interface. The only place car PC enthusiasts can go for advice, tips and tools is a handful of hard-to-find Web sites--until now. Car PC Hacks is your guide into the car PC revolution. Packing MP3 players, handheld devices, computers and video-on-demand systems gives you a pile too heavy to carry. But add a car and put them together, you've got a powerful and mobile multimedia center requiring

no lifting. The next time you give kids a lift, you won't hear, Are we there yet? Instead, expect We're there already? as they won't want to leave the car while playing video games from multiple consoles. Car PC Hacks is the first book available to introduce and entrench you into this hot new market. You can count on the book because it hails from O'Reilly, a trusted resource for technical books. Expect innovation, useful tools, and fun experiments that you've come to expect from O'Reilly's Hacks Series. Maybe you've hacked computers and gadgets, and now you're ready to take it to your car. If hacking is new and you would like to mix cars and computers, this book gets you started with its introduction to the basics of car electrical systems. Even when you're unclear on the difference between amps and watts, expect a clear explanation along with real-life examples to get on track. Whether you're venturing into car PC for the first time or an experienced hobbyist, hop in the book for a joy ride.

Hashtag Elizabeth Losh,2019-09-19 Best Books of 2019-Scholarly Kitchen Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. Hashtags can silence as well as shout. They originate in the quiet of the archive and the breathless suspense of the control room, and find voice in the roar of rallies in the streets. The #hashtag is a composite creation, with two separate but related design histories: one involving the crosshatch symbol and one about the choice of letters after it. Celebration and criticism of hashtag activism rarely address the hashtag as an object or try to locate its place in the history of writing for machines. Although hashtags tend to be associated with Silicon Valley invention myths or celebrity power users, the story of the hashtag is much longer and more surprising, speaking to how we think about naming, identity, and being human in a non-human world. Object Lessons is published in partnership with an essay series in The Atlantic.
