Applications and Practices in Ontology Design, Extraction, and Reasoning G. Cota, M. Daquino, G.L. Pozzato, 2020-12-02 Semantic Web technologies enable people to create data stores on the Web, build vocabularies, and write rules for handling data. They have been in use for several years now, and knowledge extraction and knowledge discovery are two key aspects investigated in a number of research fields which can potentially benefit from the application of semantic web technologies, and specifically from the development and reuse of ontologies. This book, *Applications and Practices in Ontology Design, Extraction, and Reasoning*, has as its main goal the provision of an overview of application fields for semantic web technologies. In particular, it investigates how state-of-the-art formal languages, models, methods, and applications of semantic web technologies reframe research questions and approaches in a number of research fields. The book also aims to showcase practical tools and background knowledge for the building and querying of ontologies. The first part of the book presents the state-of-the-art of ontology design, applications and practices in a number of communities, and in doing so it provides an overview of the latest approaches and techniques for building and reusing ontologies according to domain-dependent and independent requirements. Once the data is represented according to ontologies, it is important to be able to query and reason about them, also in the presence of uncertainty, vagueness and probabilities. The second part of the book covers some of the latest advances in the fields of ontology, semantics and reasoning, without losing sight of the book's practical goals.

What School Leaders Need to Know About Digital Technologies and Social Media Scott McLeod, Chris Lehmann, 2011-09-13 Facebook, Twitter, Google...today's tech-savvy students are always plugged in. However, all too often their

teachers and administrators aren't experienced in the use of these familiar digital tools. If schools are to prepare students for the future, administrators and educators must harness the power of digital technologies and social media. With contributions from authorities on the topic of educational technology, *What School Leaders Need to Know About Digital Technologies and Social Media* is a compendium of the most useful tools for any education setting. Throughout the book, experts including Will Richardson, Vicki Davis, Sheryl Nussbaum-Beach, Richard Byrne, Joyce Valenza, and many others explain how administrators and teachers can best integrate technology into schools, helping to make sense of the often-confusing world of social media and digital tools. They offer the most current information for the educational use of blogs, wikis and podcasts, online learning, open-source courseware, educational gaming, social networking, online mind mapping, mobile phones, and more, and include examples of these methods currently at work in schools. As the book clearly illustrates, when these tools are combined with thoughtful and deliberate pedagogical practice, it can create a transformative experience for students, educators, and administrators alike. *What School Leaders Need to Know About Digital Technologies and Social Media* reveals the power of information technology and social networks in the classroom and throughout the education community.

Educational Media and Technology Yearbook Robert Maribe Branch, Hyewon Lee, Sheng-Shiang Tseng, 2021-08-24 This book is Volume 43 of the *Educational Media and Technology Yearbook*. For the past 40 years, our Yearbook has contributed to the field of Educational Technology by presenting contemporary topics, ideas, and developments regarding diverse technology tools for education. The Yearbook has inspired researchers, practitioners, and teachers to consider how to develop technological designs, curricula, and instruction. The audience for the Yearbook typically consists of media and technology professionals in K-12 schools,

higher education, and business contexts. The Yearbook editors have dedicated themselves to providing a record of contemporary trends related to educational communications and technology and strive to highlight special movements that have clearly influenced the educational technology field. This volume continues the tradition of offering topics of interest to professionals practicing in other areas of educational media and technology. Includes research on emerging and contemporary topics in the field of educational technology; Provides an ongoing report on the current issues in the field of educational technology; Contains a section presenting organizations dedicated to educational technology; Includes a section presenting graduate programs in the field of educational technology; Includes a section presenting mediagraphy in the field of educational technology.

Orey,Stephanie A. Jones,Robert Maribe Branch,2012-11-06 As digital devices play a more critical role in daily life than ever, more opportunities arise for innovative learning technologies—a trend on full display in the Educational Media and Technology Yearbook for 2012. This latest edition, volume 37, from the Association for Education, Communication, and Technology (AECT) notes the most current trends in the field of learning design and technology, taking into account the implications for both formal and informal learning. The majority of articles train their focus on graduate and professional goals, including an analysis of doctoral programs in educational technology and new collaborative learning platforms. Library science is a featured component of this analysis and Library Science programs are featured prominently in this analysis. Mediagraphy and profiles of leaders in the field are also included.

Advances in Multimedia Information Processing - PCM 2004

Kiyoharu Aizawa,Yuichi Nakamura,Shin'ichi Satoh,2004-10-29

Welcome to the proceedings of the 5th Pacific Rim Conference on Multimedia (PCM 2004) held in Tokyo Waterfront City, Japan, November 30–December 3, 2004. Following the success of the preceding conferences, PCM 2000 in Sydney, PCM 2001 in Beijing, PCM 2002 in Hsinchu, and PCM 2003 in Singapore, the 5th PCM brought together the researchers, developers, practitioners, and educators in the field of multimedia. Theoretical breakthroughs and practical systems were presented at this conference, thanks to the support of the IEEE Circuits and Systems Society, IEEE Region 10 and IEEE Japan Council, ACM SIGMM, IEICE and ITE. PCM2004 featured a comprehensive program including keynote talks, regular paper presentations, posters, demos, and special sessions. We received 385 papers and the number of submissions was the largest among recent PCMs. Among such a large number of submissions, we accepted only 94 oral presentations and 176 poster presentations. Seven special sessions were also organized by world-leading researchers. We kindly acknowledge the great support provided in the reviewing of submissions by the program committee members, as well as the additional reviewers who generously gave their time. The many useful comments provided by the reviewing process must have been very valuable for the authors' work.

This conference would never have happened without the help of many people. We greatly appreciate the support of our strong organizing committee chairs and advisory chairs. Among the chairs, special thanks go to Dr. Ichiro Ide and Dr. Takeshi Naemura who smoothly handled publication of the proceedings with Springer. Dr. Kazuya Kodama did a fabulous job as our Web master.

Ubiquitous Computing and Multimedia Applications Tai-hoon Kim, Hojjat Adeli, Rosslyn John Robles, Maricel Balitanas, 2011-04-08 This two-volume set (CCIS 150 and CCIS 151) constitutes the refereed proceedings of the Second International Conference on Ubiquitous Computing and Multimedia

Applications, UCMA 2011, held in Daejeon, Korea, in April 2011. The 86 revised full papers presented were carefully reviewed and selected from 570 submissions. Focusing on various aspects of advances in multimedia applications and ubiquitous computing with computational sciences, mathematics and information technology the papers present current research in the area of multimedia and ubiquitous environment including models and systems, new directions, novel applications associated with the utilization, and acceptance of ubiquitous computing devices and systems.

Carbon Dioxide Sequestration in Geological Media

Matthias Grobe, Jack C. Pashin, Rebecca L. Dodge, 2010-03-01 Over the past 20 years, the concept of storing or permanently storing carbon dioxide in geological media has gained increasing attention as part of the important technology option of carbon capture and storage within a portfolio of options aimed at reducing anthropogenic emissions of greenhouse gases to the earth's atmosphere. This book is structured into eight parts, and, among other topics, provides an overview of the current status and challenges of the science, regional assessment studies of carbon dioxide geological sequestration potential, and a discussion of the economics and regulatory aspects of carbon dioxide sequestration.
