Ryan Trapp, Lee Abbamonte

Advances in Communication Networking Yvon Kermarrec,2014-12-12 This book constitutes the refereed proceedings of the 20th EUNICE/IFIP WG 6.2, 6.6 Workshop on Advances in Communication Networking, EUNICE 2014, held in Rennes, France, in September 2014. The 21 papers presented were carefully reviewed and selected from numerous submissions and present aspects in the field of information and communication technologies.

Chasing 193 Ryan Trapp, Lee Abbamonte,2015-05-19 There are 193 official countries on Earth. Fewer than 100 people have seen them all. The 34 people interviewed for this book have made it their life mission to visit every last one of them. Jam-packed with nearly 500 pages, these revealing Q&A interviews examine the lives of ordinary people who have undertaken extraordinary travels in their quest to visit every country in the world. Learn about their adventures and explore the highs and lows of what it means to be an extreme traveler, from near-death experiences to moments that have left even the most jaded traveler speechless. How did they do this? What have they sacrificed? What compelled these people to go beyond the realm of the ordinary tourist to see the entire world? The answers to these questions and more are contained in this rare look inside the minds of some of the world's most-traveled people. Their stories, ranging from being questioned by U.S. Special Forces while doing a solo tour of war torn Iraq, to showing a Costco ID card in order to tour a restricted launching place for space satellites in French

Guiana, to entering Libya during Arab Spring and getting caught in the cross fire of cigarette smugglers, and many more, are guaranteed to fascinate and entertain every travel fan.

Zane's Trace John M. Barr, 2020-08-27 Zanes Trace was the first government-sanctioned road in the Northwest Territory of the United States. Lost to the ultimate transgressions of modern progress, the location of Zane's Trace has been the subject of speculation for well more than a century. A variety of congressional and territorial acts, correspondence, land records, and pioneer recollections will establish the original route and landowners on that route presented as never done before. Sourced and Indexed including 90 + color images of original documents, plats, maps, and more.

Another Country Christopher Anthony Camuto, 1999

Going Up Country John Coyne, 1994 An anthology of travel writing about distant corners of the world. These previously unpublished pieces of fascinating journeys to exotic places were written expressly for this book by Bob Shacochis, Richard Wiley, Mary-Ann Tirone Smith, P.F. Kluge, and Joanne Omang, among others.

198 Gunnar Garfors, 2015-07-07 Gunnar Garfors has visited all 198 countries in the world - as the youngest hobby traveler - and has encountered people, places and situations most can only dream of. The globetrotter has deftly woven his experiences together into a story that takes the reader on an emotive ride and establishes a connection with him and his quest. Expect

The C# Programming Language (Covering C# 4.0), Portable Documents Anders Hejlsberg, Mads Torgersen, Scott Wiltamuth, Peter Golde, 2010-10-31 The popular C# programming language combines the high productivity of rapid application development languages with the raw power of C and C++. Updated to cover the new features of C# 4.0, including dynamic binding, named and optional parameters, and covariant and contravariant generic types, this release takes the language to the next level by adding the ability to cleanly write programs that don't rely on static type definitions. This allows dynamic programming languages such as Python, Ruby, and JavaScript to feel native to C#. The C# Programming Language, Fourth Edition, continues to be the authoritative and annotated technical reference for C# 4.0. 7nbsp; Written by Anders Hejlsberg, the language's architect, and his colleagues, Mads Torgersen, Scott Wiltamuth, and Peter Golde, this volume has been completely updated for C# 4.0. The book provides the complete specification of the language, along with descriptions, reference materials, code samples, and annotations from twelve prominent C# gurus. The many annotations bring a depth and breadth of understanding rarely found in any programming book. As the main text of the book introduces the concepts of the C# language, cogent annotations explain why they are important, how they are used, how they relate to other languages, and even how they evolved. This book is the definitive, must-have reference for any developer who wants to understand C#.

With annotations from: Brad Abrams, Joseph Albahari, Krzysztof Cwalina, Jesse Liberty, Eric Lippert, Christian Nagel, Vladimir Reshetnikov, Marek Safar, Chris Sells, Peter Sestoft, Jon Skeet, and Bill Wagner.

Programming Distributed Computing Systems Carlos A. Varela, 2013-05-31 An introduction to fundamental theories of concurrent computation and associated programming languages for developing distributed and mobile computing systems. Starting from the premise that understanding the foundations of concurrent programming is key to developing distributed computing systems, this book first presents the fundamental theories of concurrent computing and then introduces the programming languages that help develop distributed computing systems at a high level of abstraction. The major theories of concurrent computation—including the π -calculus, the actor model, the join calculus, and mobile ambients—are explained with a focus on how they help design and reason about distributed and mobile computing systems. The book then presents programming languages that follow the theoretical models already described, including Pict, SALSA, and JoCaml. The parallel structure of the chapters in both part one (theory) and part two (practice) enable the reader not only to compare the different theories but also to see clearly how a programming language supports a theoretical model. The book is unique in bridging the gap between the theory and the practice of programming distributed computing systems. It can be used as a textbook for graduate and advanced undergraduate students in computer science or as a reference for

researchers in the area of programming technology for distributed computing. By presenting theory first, the book allows readers to focus on the essential components of concurrency, distribution, and mobility without getting bogged down in syntactic details of specific programming languages. Once the theory is understood, the practical part of implementing a system in an actual programming language becomes much easier.

Non-referential Architecture Valerio Olgiati, Markus Breitschmid, 2019 Non-Referential Architecture is a manifesto on a new kind of architecture. Non-Referential Architecture presents a new framework for architecture in a world that is increasingly free of ideologies. We have left behind the values of multicultural postmodernity! Non-Referential Architecture offers unlimited possibilities for the liberated mind.

The Images of Architects Valerio Olgiati, 2013 The Visible Origin of Architecture: I asked architects to send me important images that show the basis of their work. Images that are in their head when they think. Images that show the origin of their architecture. In this book we find 44 individual 'musees imaginaires'. The most unique architects living today each present up to 10 images to explain the autobiographical roots of their oeuvre. The images are explanations, metaphors, foundations, memories and intentions. They are poetic and philosophical avowals. They reveal a personal perspective on thoughts. They show the roots of architecture and expectations concerning projects. Conscious and unconscious. This book has the format of a

reader. As little as possible is said. The images are small, legible and interpretable as icons. As individual collections, they present a personal view of an individual world, while as a whole they provide a universal view of the perceptible origin of contemporary architecture. Valerio Olgiati The images submitted to Olgiati are personal, confidential and poetic revelations of the deeper foundations on which the architects' projects are based. The collection acts as a kind of depth gauge of contemporary world architecture. The list comprises the 44 most unique architects living today: David Adjaye, Francisco Aires Mateus, Manuel Aires Mateus, Alejandro Aravena, Ben van Berkel, Mario Botta, Alberto Campo Baeza, Adam Caruso, Peter St John, David Chipperfield, Preston Scott Cohen, Hermann Czech, Roger Diener, Peter Eisenman, Sou Fujimoto, Anton Garcia-Abril, Go Hasegawa, Jacques Herzog, Pierre de Meuron, Steven Holl, Anne Holtrop, Junya Ishigami, Arata Isozaki, Toyo Ito, Bijoy Jain (Studio Mumbai), Momoyo Kaijima, Yoshiharu Tsukamoto (Atelier Bow-Wow), Christian Kerez, Hans Kollhoff, Winy Maas (MVRDV), Peter Markli, Jurgen Mayer H., Richard Meier, Glenn Murcutt, Ryue Nishizawa, Valerio Olgiati, John Pawson, Cecilia Puga, Smiljan Radic, Richard Rogers, Kazuyo Sejima, Jonathan Sergison, Stephen Bates, Miroslav ik, Alvaro Siza Vieira, Eduardo Souto de Moura, Robert Venturi, Denise Scott Brown, Peter Wilson (Bolles + Wilson), Peter Zumthor.
