*The Evolution of Project Management Practice* Darren Dalcher, 2017-09-13 Project practice has undergone significant changes requiring new ways of thinking about and managing projects. The single focus on the staged delivery of artefacts is gradually being replaced by a wider interest in stakeholders, value, benefits, and complexity. As a result there is a growing interest in the development of practitioner capabilities, grounded in the recognition that dealing with permeable boundaries and unstructured situations transcends normative processes. Modern practitioners increasingly utilise deliberative and reflective approaches, often challenging received wisdom and traditional interpretations. This volume provides a sampling of some of the best writing in the project domain, enabling readers to access a wider group of authors, ideas, and perspectives. Key topics covered include agility and programme management, planning, people, business cases, contracts, teams, sponsorship, collaboration, strategy, patterns, context, change, and benefits. The main aims of the collection are to reflect on the state of practice within the discipline; to propose new extensions and additions to good practice; to offer new insights and perspectives; to distil new knowledge; and, to provide a way of sampling a range of the most promising ideas, perspectives and styles of writing from some of the leading thinkers and practitioners in the discipline.

Understanding the Creative Process Rigoberto Garcia,2008-02-01 As a Project Manager you must have a clear understanding of how to manage and encourage the creative process. Project managers alike are geared toward people management and not creative cycles. Most times they find themselves unable to mitigate conflict and the creative process fails. In my book, I introduced basic management concepts designed to manage the creative environment while setting the stage for innovation. By managing the creative environment, a Project Manager will lay the groundwork for the innovation without forsaking other basic management cycles. Since the main goal of a Project Manager should be to manage scope and the strategical heading of a project; he or she must prove themselves to be a capable leader, able to understand the needs of the team essentially when it comes to how to care for and mitigate innovation in a project environment prior to initiating a creative brainstorming session.
