The Go Global Guide Emma Jones,2011-11-14 Supported by Alibaba.com International trade has moved into a new phase. Gone are the days when years of effort were required in the domestic market before going global. You can now start a company on Monday and be trading with the world by Wednesday. The web has made this perfectly possible and faced with a sluggish UK market there's never been a better time to leverage technology and look overseas; after all, a connection to the internet is a connection to over 1 billion potential customers. Our politicians are encouraging it and technology is in place to enable it, yet small business owners are resisting the international trade opportunity for fear of perceived language, currency, cultural and business barriers. In this book,

bestselling author Emma Jones puts paid to these perceptions and shows you don't need big budgets or to be a big business to be a globally successful one. She offers a route map that will have you trading across the globe and illustrates how it can be done, with stories from 20 successful exporters. Whether you're selling tangibles or services, if you've considered exporting but didn't know where to start or you're making international sales and want to grow further, this is the book for you. Consider it your guide as you embark on a journey of international deals and discovery. www.alibaba.com http://www.enterprisenation.com/events/go-global/

Topology Simplification Algorithm for the Segmentation of Medical Scans Sylvain Jaume,2004 Magnetic Resonance Imaging, Computed Tomography, and other image modalities are routinely used to visualize a particular structure in the patient's body. The classification of the image region corresponding to this structure is called segmentation. For applications in Neuroscience, it is important for the segmentation of a brain scan to represent the boundary of the brain as a single folded sheet.

However the segmentation of the brain generally exhibits many erroneous holes. Consequently we have developed an algorithm for automatically removing holes in segmented medical scans while preserving the accuracy of the image. Upon concepts of Discrete Topology, we correct the holes based on the smallest modification to the image. First we detect each hole with a front propagation and a Reeb graph. Then we search for a number of loops around the hole on the isosurface of the image. Finally we select the loop that minimizes the modification to the image and correct the hole in the image. At each step we limit the size of the data in memory. With these contributions our algorithm removes every hole in the image with high accuracy and low complexity even for images that do not fit into the main memory. To help doctors and scientists to obtain segmentations without holes, we make our software publicly available.

LCPC'97 David Sehr,1997-06-11 This book presents the thoroughly refereed post-workshop proceedings of the 9th International Workshop on Languages and Compilers for Parallel Computing, LCPC'96, held in San Jose, California, in August 1996. The book contains 35 carefully revised full

papers together with nine poster presentations. The papers are organized in topical sections on automatic data distribution and locality enhancement, program analysis, compiler algorithms for fine-grain parallelism, instruction scheduling and register allocation, parallelizing compilers, communication optimization, compiling HPF, and run-time control of parallelism.

Reflectarray Antennas: Analysis, Design, Fabrication, and Measurement Jafar Shaker,Mohammad Reza Chaharmir ,Jonathan Ethier,2013-11-01 Reflectarray antennas refer to the class of radiating structures that are comprised of an array of radiating elements, re-radiating the energy that is impinged on them from one or more radiating feeds that are located in free space. The constituent radiators that build a reflectarray can be shaped to bring about some flexibility in the way that antenna operates such as multi band/polarization operation. The printed nature of these elements allow integration of

active elements that can further enhance the functionality of the reflectarray. This allows for capabilities such as power amplification, adaptive beam shaping, and beam switching. This resource presents readers with design guidelines along with an ample amount of material on different types of reflectarrays and methods of analysis. This book begins with introductory material on reflectarray antennas and progresses to the presentation of state-of-the-art research in the field. A direct comparison with conventional reflector antennas is provided, focusing on conventional efficiency figures of reflectors. Moreover, this book offers remarks on the future direction of reflectarray research and also potential applications of the technology in face of the emergence of new fabrication techniques to accommodate both passive and active elements.

Geoff Wilson's Fishing Knots & Rigs Geoff Wilson,2011 Book & DVD. Geoff has been tying and testing fishing knots for over forty years and his knowledge in this field is second to none. This Special Edition of his world-wide best selling book comes in an instructional / interactive book / DVD format featuring Geoff tying his own preferred knots and rigs.
