Advances in Cryptology David Chaum, 1984-05 An international community of researchers is now flourishing in the area of cryptology-there was none half-a-dozen years ago. The intrinsic fascination of the field certainly is part of the explanation. Another factor may be that many sense the importance and potential consequences of this work, as we move into the information age. I believe that the various meetings devoted to cryptology over the past few years have contributed quite significantly to the formation of this community, by allowing those in the field to get to know each other and by providing for rapid exchange of ideas. CRYPTO 83 was once again truly the cryptologic event of the year. Many of the most active participants continue to attend each year, and attendance continues to grow at a healthy rate. The informal and collegial atmosphere and the beach side setting which contribute to the popularity of the event were again supported by flawless weather. The absence of parallel sessions seemed to provide a welcome opportunity to keep abreast of developments in the various areas of activity. Each session of the meeting organized by the program committee is represented by a section in the present volume. The papers were accepted by the program committee based on abstracts, and appear here without having been otherwise refereed. The last section contains papers presented at the informal rump session. A keyword index and an author index to the papers is provided at the end of the volume.

Advances in Cryptology — CRYPTO '91 Joan Feigenbaum, 1992-02-26 Crypto '91 was the eleventh in a series of workshops on cryptology sponsored by the International Association for Cryptologic Research and was held in Santa Barbara, California, in August 1991. This volume contains a full paper or an extended abstract for each of the 39 talks presented at the workshop. All

theoretical and practical aspects of cryptology are represented, including: protocol design and analysis, combinatorics and authentication, secret sharing and information theory, cryptanalysis, complexity theory, cryptographic schemas based on number theory, pseudorandomness, applications and implementations, viruses, public-key cryptosystems, and digital signatures.

Advances in Cryptology -- CRYPTO' 86 A. M. Odlyzko, 1987 This volume contains the proceedings of CRYPTO 86, one in a series of annual conferences at the University of California at Santa Barbara devoted to cryptologic research. The papers are presented in seven sections containing most of the presentations in the regular program, and a final section based on some informal presentations at a Rump Session. The volume presents a very comprehensive picture of the latest public research in cryptography. Together with the proceedings of the previous Crypto and Eurocrypt meetings, it forms a set of indispensable reference works in this area. Of particular interest in this volume is the extensive section on zero-knowledge proofs, which are a significant new development. This volume is intended for all those whose main interest is in cryptography, as well as those computer scientists, engineers and mathematicians who like to keep informed of the progress in this subject or whose work is related to it.

The Voynich Manuscript M. E. D'Imperio,1978 In spite of all the papers that others have written about the manuscript, there is no complete survey of all the approaches, ideas, background information and analytic studies that have accumulated over the nearly fifty-five years since the manuscript was discovered by Wilfrid M. Voynich in 1912. This report pulls together all the information the author could obtain from all the sources she has examined, and to present it in an orderly fashion. The resulting survey will provide a firm basis upon which other students may build their work, whether they seek to decipher the text or simply to learn more about the problem.
