Applications of Electronic Structure Theory Henry Schaefer, 2012-12-06 These two volumes deal with the quantum theory of the electronic structure of ab initio is the notion that approximate solutions molecules. Implicit in the term of Schrodinger's equation are sought from the beginning, i. e. , without recourse to experimental data. From a more pragmatic viewpoint, the distinguishing feature of ab initio theory is usually the fact that no approximations are involved in the evaluation of the required molecular integrals. Consistent with current activity in the field, the first of these two volumes contains chapters dealing with methods per se, while the second concerns the application of these methods to problems of chemical interest. In a sense, the motivation for these volumes has been the spectacular recent success of ab initio theory in resolving important chemical questions. However, these applications have only become possible through the less visible but equally important efforts of those developing new theoretical and computational methods and models. Henry F. Light Robotics - Structure-mediated Nanobiophotonics Jesper Glückstad,Darwin Palima,2017-05-19 Light Robotics – Structure-Mediated Nanobiophotonics covers the latest means of sculpting of both light and matter for achieving bioprobing and manipulation at the smallest scales. The synergy between photonics, nanotechnology and biotechnology spans the rapidly growing field of nanobiophotonics. Nanoscale resolutions enable optical scientists to assess ever more accurate information. However, scientific hypothesis testing demands tools, not only for observing nanoscopic phenomena, but also for reaching into and manipulating nanoscale constituents. Taking an application based focus, this book explores how nanophotonics can productively be used in both the biomedical and life sciences, allowing readers to clearly see how structure-mediated nanobiophotonics can be used to increase our engineering toolbox for biology at the smallest scales. This book will be of great use to researchers and scientists working in the fields of optics and photonics. It will also be of great value to those working in the field of biotechnology, showcasing how nanotechnology can help provide new, effective ways to solve biomedical problems. Presents cutting-edge research on the principles, mechanisms, optical techniques, fabrication, modeling, devices and applications of nanobiophotonics Brings together the diverse field of structure-mediated nanobiophotonics into one coherent volume Showcases how nanophotonics can be used to create new, more effective micro- and nano-biodevices

Business Networking Catherine O'Sullivan,Terry O'Sullivan,2021-10-31 The term 'networking' can mean very different things in different contexts: formal organisational structures, personal or career development, or a technique for increasing sales. This is an approachable book which brings together the basics of all these meanings, underpinned by an overview of multiple theoretical models that support the various approaches to networking. Drawing on mainstream models in the fields of marketing, employability, innovation and organisational studies, Business Networking provides an integrated overview of the process and structure of networking across a range of contexts. Synthesising theory with practice, features include examples and viewpoints from a range of networking practitioners in each chapter, presented in their own words, as well as chapter summaries and reflective questions. Networking is considered a key skill for students, entrepreneurs and practitioners and, given the explosion of opportunities brought by the digital age for individuals and organisations to operate within a broad and global network, an introduction to maximising the benefits is timely. This book should be recommended reading for a broad range of postgraduate courses, from relationship marketing and entrepreneurship skills to employability and degree apprenticeship programmes. It should also be useful for reflective practitioners looking to expand and utilise their networks effectively.
