  Pro Multithreading and Memory Management for iOS and OS X Kazuki Sakamoto,Tomohiko Furumoto,2012-06-12 If you want to develop efficient, smooth-running applications, controlling concurrency and memory are vital. Automatic Reference Counting is Apple's game-changing memory management system, new to Xcode 4.2. Pro Multithreading and Memory Management for iOS and OS X shows you how ARC works and how best to incorporate it into your applications. Grand Central Dispatch (GCD) and blocks are key to developing great apps, allowing you to control threads for maximum performance. If for you, multithreading is an unsolved mystery and ARC is unexplored territory, then this is the book you'll need to make these concepts clear and send you on your way to becoming a master iOS and OS X developer. What are blocks? How are they used with GCD? Multithreading with GCD Managing objects with ARC

  Mobile Robotics Ulrich Nehmzow,2012-12-06 Mobile Robotics: A Practical Introduction (2nd edition) is an excellent introduction to the foundations and methods used for designing completely autonomous mobile robots. A fascinating, cutting-edge, research topic, autonomous mobile robotics is now taught in more and more universities. In this book you are introduced to the fundamental

concepts of this complex field via twelve detailed case studies that show how to build and program real working robots. Topics covered in clued learning, autonomous navigation in unmodified, noisy and unpredictable environments, and high fidelity robot simulation. This new edition has been updated to include a new chapter on novelty detection, and provides a very practical introduction to mobile robotics for a general scientific audience. It is essential reading for 2nd and 3rd year undergraduate students and postgraduate students studying robotics, artificial intelligence, cognitive science and robot engineering. The update and overview of core concepts in mobile robotics will assist and encourage practitioners of the field and set challenges to explore new avenues of research in this exiting field. The author is Senior Lecturer at the Department of Computer Science at the University of Essex. A very fine overview over the relevant problems to be solved in the attempt to bring intelligence to a moving vehicle. Professor Dr. Ewald von Puttkamer, University of Kaiserslautern Case studies show ways of achieving an impressive repertoire of kinds of learned behaviour, navigation and map-building. The book is an admirable introduction to this modern approach to mobile robotics and certainly gives a great deal of food for thought. This is an important and though-provoking book. Alex M. Self-Referentiality of Cognition and (De)Formation of Ethnic Boundaries Oleg Pakhomov,2017-07-21 This book develops a new approach towards the formation of the ethnic boundary as a complex interrelation between cognitive operations and ethnic/national boundaries formation process. Korean diaspora in China, Russia, the United States, and Japan illustrate how this process correlates with the nationalism of the host societies, highlighting the differences and similarities. It covers a wide range of topics, from politics and economics to arts, mass culture and psychology, from comparative and interdisciplinary perspectives, at the same time avoiding eclectic combinations of different spheres of knowledge. This book challenges interactionist and post-modernist paradigms that dominate today's social science and facilitates dialogue between social and natural scientists, especially cognitive studies to promote more complex and still systematic approach

towards society. It combines in-depth research, comparative perspectives and theoretical thoroughness. It appeals to anyone interested in history, culture, economic and other aspects of Korean migration; the general theory and practice of migration; East Asian studies, Asian American studies, Russian studies and studies on social complexity and cognition.
