No Miracle Cures Thomas David Kehoe,2006 Stuttering is caused by at least five factors: genetics, two neurological abnormalities, responses to stress, and speech-related fears and anxieties. But most stuttering therapy programs address only one issue, such as breathing a certain way, or not hiding your stuttering. Each might help you in some situations, but you still stutter in other situations. *No Miracle Cures* instead guides you through treatments for all five factors that contribute to stuttering. You'll find the best treatments for children, teenagers, adults who stutter mildly, and adults who stutter severely. Stuttering may seem like one big problem to you. *No Miracle Cures* breaks down stuttering into many small problems'and shows you how to solve each one.

Speech Production Wouter Hulstijn,Herman F. M. Peters,Pascal H. H. M. Van Lieshout,1997 A selection of 62 reviewed papers on speech production as it relates to the other subjects. Combining theoretical and experimental studies, they explore models in speech production, methods and measurements in pathological speech, brain research, developmental aspects of speech production and fluency disorders, and other broad areas. The themes of speech motor control in stuttering and the assessment and developmental aspects of speech production in pathological speech have been carried over from earlier Nijmegen conferences. The collection is designed to be an authoritative text on the basic science of motor control in speech production, an introduction to the various new brain imaging techniques and how they are and can be used to study speech production, and a detailed account of the current studies. No subject index. Annotation copyrighted by Book News, Inc., Portland, OR.

Neural Control of Speech Frank H. Guenther,2016-07-22 A comprehensive and unified account of the neural computations underlying speech production, offering a theoretical framework bridging the behavioral and the neurological literatures. In this book, Frank Guenther offers a comprehensive, unified account of the neural computations underlying speech production, with an emphasis on speech motor control rather than linguistic content. Guenther focuses on the brain mechanisms responsible for commanding the musculature of the vocal tract to produce articulations that result in an acoustic signal conveying a desired string of syllables. Guenther provides neuroanatomical and neurophysiological descriptions of the primary brain structures involved in speech production, looking particularly at the cerebral cortex and its interactions with the cerebellum and basal ganglia, using basic concepts of control theory (accompanied by nontechnical explanations) to explore the computations performed by these brain regions. Guenther offers a detailed theoretical framework to account for a broad range of both behavioral and neurological data on the production of speech. He discusses such topics as the goals of the neural controller of speech; neural mechanisms involved in producing both short and long utterances; and disorders of the speech system, including apraxia of speech and stuttering. Offering a bridge between the neurological and behavioral literatures on speech production, the book will be a valuable resource for researchers in both fields.

Stuttering Barry Guitar,2013-01-29 Stuttering: An Integrated Approach to Its Nature presents the most comprehensive textbook on the topic today, providing an overview of the etiology and development of stuttering and details, appropriate approaches to accurate assessment and treatment. Exploring a variety of practice settings, this core introductory book grounds all topics in a firm basis of the disorder's origin and nature. This edition has been thoroughly

updated to address all current methodologies.

Stuttering and Cluttering David Ward, 2008-06-03 Stuttering and Cluttering provides a comprehensive overview of both theoretical and treatment aspects of disorders of fluency: stuttering (also known as stammering) and the lesser-known cluttering. The book demonstrates how treatment strategies relate to the various theories as to why stuttering and cluttering arise, and how they develop. Uniquely, it outlines the major approaches to treatment alongside alternative methods, including drug treatment and recent auditory feedback procedures. Part one looks at different perspectives on causation and development, emphasizing that in many cases these apparently different approaches are inextricably intertwined. Part two covers the assessment, diagnosis, treatment, and evaluation of stuttering and cluttering. In addition to chapters on established approaches, there are sections on alternative therapies, including drug therapy, and auditory feedback, together with a chapter on counselling. Reference is made to a number of established treatment programs, but the focus is on the more detailed description of specific landmark approaches. These provide a framework from which the reader may not only understand others' treatment procedures, but also a perspective from which they can develop their own. Offering a clear, accessible and comprehensive account of both the theoretical underpinning of stammering therapy and its practical implications, the book will be of interest to speech language therapy students, as well as qualified therapists, psychologists, and to those who stutter and clutter.

The Voice and Voice Therapy Daniel R. Boone, Stephen C. McFarlane, Shelley L. Von Berg, Richard I. Doing Conversation Analysis Paul ten Have, 2007-09-25 This is the book for introducing and getting to grips with conversation analysis. Accessible, comprehensive and very applied. - Steven Wright, Lancaster University A clearly written book. It puts CA into perspective by presenting exemplary studies and differentiating CA from other approaches to discourse. It is full of advice concerning the technicalities of recording, transcription and analysis. It will be most useful to my students. - Spiros Moschonas, University of Athens The Second Edition of Paul ten Have's classic text *Doing Conversation Analysis* has been

substantially revised to bring the book up-to-date with the many changes that have occurred in conversation analysis over recent years. The book has a dual purpose: to introduce the reader to conversation analysis (CA) as a specific research approach in the human sciences, and to provide students and novice researchers with methodological and practical suggestions for actually doing CA research. The first part of the book sets out the core theoretical concepts that underpin CA and relates these to other approaches to qualitative analysis. The second and third parts detail the specifics of CA in its production of data, recordings and transcripts, and its analytic strategies. The final part discusses ways in which CA can be 'applied' in the study of specific institutional settings and for practical or critical purposes.

Stuttering Joseph S. Kalinowski, Tim Saltuklaroglu, 2005-11 This textbook presents a new paradigm for understanding the nature and treatment of stuttering based on recent discoveries in neuroscience. The authors illustrate how visible stuttering manifestations are actually a solution to a central problem, acting as a compensatory mechanism for a central involuntary block, rather than a problem in themselves. This book features methods that reduce stuttering by inhibiting this central block, through the use of sensory and motor tools, notably mirror neurons, and shows readers that stuttering is not a condition that can be effortlessly trained out of the system or eliminated via simple speech retraining.

Cognition in Schizophrenia Tonmoy Sharma, Philip D. Harvey, 2000 Although it has been known for 100 years that cognitive functioning is impaired in schizophrenia, the implications of this impairment have only recently been clearly understood. While in the past, cognitive deficits were thought to be the result of other aspects of the illness, such as poor cooperation, or as a result of the treatment of the illness, it is now known that these factors exert only a very

minor influence on cognitive deficit. This book, with contributions from the major international names in the field, reviews the most recent research on the impairment of cognitive functioning in schizophrenia, covering: what it is, how wide-ranging it can be, what the clinical implications are, and how it can be treated? The book is divided into three sections. The first section provides background information on the important aspects of cognitive functioning in schizophrenia. The second section provides information on the correlates of cognitive functioning, examining classical symptoms of the illness, as well as social and adaptive functional deficits. The final section provides information on the treatment of cognitive functioning in schizophrenia, from the older less effective treatments with conventional antipsychotics, to the developing treatment strategies using experimental compounds. A clear insight into cognitive deficit is the key to understanding why previous treatments have failed, and the key by which new treatments may change this terrible illness, treatments significantly more effective than earlier interventions.
