Reaching 50 Million Nanostores Jan Fransoo, 2017-10-16 Millions of small, family operated nanostores are the main source of consumer packaged goods in many neighborhoods of large cities across the developing world. In many of these countries, well over half of consumer goods are sold via the nanostore channel. Understanding this channel is critical for anyone selling or intending to sell into these large and fast growing markets. Tackling the logistics complexities of serving millions of nanostores is a challenge that many face, yet few master. In this book, we discuss logistics distribution and commercial route-to-market concepts for this channel and present best practices from Latin America, Asia, and North Africa. The book serves to inspire managers in marketing, sales, supply chain, distribution, logistics, and general management to develop their understanding and their business success in these growing markets. This book includes a unique set of case studies focusing on companies that have successfully created forward-looking approaches to retail operations over the world. The case studies included provide readers with a range of best practices, useful insights, and commercial and logistics strategies for serving diverse distribution channels. The authors (with extensive experience within these markets) and editors (from premier research institutions in Europe and the US) have done extensive field research over multiple years to develop the insights that are shared in this book. With the growth of convenience stores in the developed world, the insights also serve as an inspiration for those in Europe and North America that are confronted with a rapid proliferation of retail outlets as proximity shopping is becoming the norm. In the final chapter, the editors reflect on recent developments, particularly in China, where electronic commerce and nanostores are partnering to become a strong rival for the organized retail channel. As the world population tends to concentrate more and more in urban environments, the two fastest growing channels for consumer goods distribution are online sales and convenient, proximal nanostores. Remarkably, this trend applies to both the most and the least developed economies. This book is a valuable resource that covers the realities and the challenges of serving nanostores, a subject much less widely covered than the sexier online e-commerce channel, but equally important for understanding the evolution of the world's fast moving consumer goods markets. - Sergio Barbarino, P&G Research Fellow and Chairman of The European Technology Platform for Logistic Innovation, ALICE

A Roadmap to Industry 4.0: Smart Production, Sharp Business and Sustainable Development Anand Nayyar, Akshi Kumar, 2019-11-27 Business innovation and industrial intelligence are paving the way for a future in which smart factories, intelligent machines, networked processes and Big Data are combined to foster industrial growth. The maturity and growth of instrumentation, monitoring and automation as key technology drivers support Industry 4.0 as a viable, competent and actionable business model. This book offers a primer, helping readers understand this paradigm shift from industry 1.0 to industry 4.0. The focus is on grasping the necessary pre-conditions, development & technological aspects that conceptually describe this transformation, along with the practices, models and real-time experience needed to achieve sustainable smart manufacturing technologies. The primary goal is to address significant questions of what, how and why in this context, such as: What is Industry 4.0? What is the current status of its implementation? What are the pillars of Industry 4.0? How can Industry 4.0 be effectively implemented? How are firms exploiting the Internet of Things (IoT), Big Data and other emerging technologies to improve their production and services? How can the implementation of Industry 4.0 be accelerated? How is Industry 4.0 changing the workplace landscape? Why is this melding of the virtual and physical world needed for smart production engineering environments? Why is smart production a game-changing new form of product design and manufacturing?

Working with Map Projections Fritz Kessler, Sarah Battersby, 2019-05-03 A map projection fundamentally impacts the mapmaking process. Working with Map Projections: A Guide to Their Selection explains why, for any given map, there isn't a single best map projection. Selecting a projection is a matter of understanding the compromises and consequences of showing a 3-D space in two dimensions. The book presents a clear understanding of the processes necessary to make logical decisions on selecting an appropriate map projection for a given data set. The authors discuss the logic needed in the selection process, describe why certain decisions should be made, and explain the consequences of any inappropriate decision made during the selection process. This book also explains how the map projection will impact the map's ability to fulfill its purpose, uses real-world data sets as the basis for the selection of an appropriate map projection, and provides illustrations of an appropriately and inappropriately selected map projection for a given data set. The authors take a novel approach to discussing map projections by avoiding an extensive inventory of mathematical formulae and using only the mathematics of map projections that matter for many mapping tasks. They also present information that is directly applicable to the process of selecting map projections and not tied to a specific software package. Written by two leading experts, this book is an invaluable resource for anyone studying or working with geospatial data, from students to experienced professionals, and will help readers successfully weigh the pros and cons of choosing one projection over another to suit a map's intended purpose.

Head First Domain-Driven Design Steven A. Lowe, 2020-07-05 What will you learn from this book? Domain-driven design flows from three guidelines: capture the model, embed it in the code, and protect it from corruption. Understanding these procedures enables you to practice DDD wisely to speed software development while improving code quality. With Head First Domain-Driven Design, developers, analysts, and architects will learn when and how to use DDD, including the technical and tactical knowledge to do just enough and do it well. This multi-sensory, brain-friendly guide helps you explore: The critical importance of harmonious models for good software How to use scenarios and rapid low-fidelity group modeling to accelerate discovery and design Ways to adjust the fidelity and scope of modeling for efficient discovery

and model capture Context mapping for team organization, planning, and relationship improvements Using intention-revealing interfaces to improve code understanding and simplify construction Where, when, why, and how to use the DDD building-block design patterns Why does this book look so different? Based on the latest research in cognitive science and learning theory, Head First Domain-Driven Design uses a visually rich format to engage your mind, rather than a text-heavy approach that puts you to sleep. Why waste your time struggling with new concepts? This multi-sensory learning experience is designed for the way your brain really works.

Fruit and Vegetable Quality Robert L. Shewfelt, Bernhard Bruckner, 2000-04-18 Improved quality requires integration across business functions and scientific disciplines. Designed for anyone involved in the management, production, handling, distribution, or processing of fruits and vegetables, it provides concise descriptions of important issues, roadmaps to the literature in specific fields, assessments of current knowledge and research needs, and specific examples of product-based research. Your guide to the dynamic developments in integrating fruit and vegetable quality projects, Fruit and Vegetable Quality: An Integrated View also presents a range of options for achieving better coordination of research across scientific disciplines.

Efficient Decision Support Systems Chiang Jao, 2011 This series is directed to diverse managerial professionals who are leading the transformation of individual domains by using expert information and domain knowledge to drive decision support systems (DSSs). The series offers a broad range of subjects addressed in specific areas such as health care, business management, banking, agriculture, environmental improvement, natural resource and spatial management, aviation administration, and hybrid applications of information technology aimed to interdisciplinary issues. This book series is composed of three volumes: Volume 1 consists of general concepts and methodology of DSSs; Volume 2 consists of applications of DSSs in the biomedical domain; Volume 3 consists of hybrid applications of DSSs in multidisciplinary domains. The book is shaped upon decision support strategies in the new infrastructure that assists the readers in full use of the creative technology to manipulate input data and to transform information into useful decisions for decision makers.

Fuzzy Systems and Data Mining IV A.J. Tallón-Ballesteros, K. Li, 2018-11-06 Big Data Analytics is on the rise in the last years of the current decade. Data are overwhelming the computation capacity of high performance servers. Cloud, grid, edge and fog computing are a few examples of the current hype. Computational Intelligence offers two faces to deal with the development of models: on the one hand, the crisp approach, which considers for every variable an exact value and, on the other hand, the fuzzy focus, which copes with values between two boundaries. This book presents 114 papers from the 4th International Conference on Fuzzy Systems and Data Mining (FSDM 2018), held in Bangkok, Thailand, from 16 to 19 November 2018. All papers were carefully reviewed by program committee members, who took into consideration the breadth and depth of the research topics that fall within the scope of FSDM. The acceptance rate was 32.85% . Offering a state-of-the-art overview of fuzzy systems and data mining, the publication will be of interest to all those whose work involves datascience.

News of the Universe Robert Bly, 2015-09-01 Acclaimed poet and translator Robert Bly here assembles a unique cross-cultural anthology that illuminates the idea of a larger-than-human consciousness operating in the universe. The book's 150 poems come from around the world and many eras: from the ecstatic Sufi poet Rumi to contemporary voices like Kenneth Rexroth, Denise Levertov, Charles Simic, and Mary Oliver. Brilliant introductory essays trace our shifting attitudes toward the natural world, from the old position of dominating or denigrating nature, to the growing sympathy expressed by the Romantics and American poets like Whitman and Dickinson. Bly's translations of Neruda, Rilke, and others, along with superb examples of non-Western verse such as Eskimo and Zuni songs, complete this important, provocative anthology.
