Data Studio and DB2 for z/OS Stored Procedures Paolo Bruni, Marichu Scanlon, IBM Redbooks, 2011-03-15 Stored procedures can provide major benefits in the areas of application performance, code re-use, security, and integrity. DB2® has offered ever-improving support for developing and operating stored procedures. This IBM® Redpaper™ publication is devoted to tools that can be used for accelerating the development and debugging process, in particular to the stored procedure support provided by the latest and fastest evolving IBM product: Data Studio. We discuss topics related to handling stored procedures across different platforms. We concentrate on how to use tools for deployment of stored procedures on z/OS®, but most considerations apply to the other members of the DB2 family. This paper is a major update of Part 6, Cool tools for an easier life, of the IBM Redbooks® publication DB2 9 for z/OS Stored Procedures: Through the CALL and Beyond, SG24-7604.

DB2 Explained for Sybase Professionals Vijay Saradhi, 2004 This book teaches DB2 to Sybase professionals quickly and efficiently by leveraging their Sybase knowledge and experience. Adaptive Server Enterprise is a great product. However, it is an indisputable fact that DB2 is a market leader among relational database products. Market statistics over the past five years clearly reveal that there is an unmistakable upward trend in DB2 market share. As a Sybase professional, you might have felt its presence already. There is an urgent and immediate need for every database professional to learn DB2. The predominant reason for Sybase professionals' reluctance to learn DB2 is the perception that it is strange and complex. This perception is only partially true. DB2 is indeed vast and complex, and some of its manuals consist of 10,000+ pages. However, you don't have to read and memorize these pages. You might not have realized it, but as a Sybase professional, you already know most of the complex and core concepts of DB2. All you need is a map between Sybase and DB2 concepts. This book gives you the precise map you need. The more you know about Sybase/ASE, the easier it is for you to learn DB2 from this book. For example, Sybase professionals already know about tables, views and indexes. Instead of spending several pages explaining a table and how it is used, we explain the functionality of DB2 tables and how they are different from Sybase tables. We concentrated less on DB2 base tables (which are similar to Sybase tables) and more on other new table concepts such as materialized query tables, replicated summary tables and typed tables. We tried to present the most relevant information, in Sybase terminology. We covered all the important aspects of DB2 in this book. And we cover more advanced topics such as data partitioning and replication in our companion book, *Advanced DB2 Explained for Sybase Professionals*. With this book, you are entitled to a CBT (DB2 Simulated Training for Sybase Professionals) at a nominal cost. We present several visual demonstrations of important concepts in this book as well as lots of bonus materials. This CBT contains important reference material that will be quite useful for a Sybase professional. For example, we present a Sybase-to-DB2 dictionary. If you know a Sybase function and would like to learn about an equivalent DB2 function, just type in the ASE function name and the dictionary will present you with an equivalent DB2 function. You will also find a DB2 command reference, catalog tables and syntax lookup. We intend to update the CBT several times a year, and as a customer, you are entitled to free downloads of the most current version from www.dbmigration.com. We thoroughly enjoyed developing this book and CBT. We hope you will find it equally enjoyable and enriching, and that you learn from it. Please send your comments and suggestions to sybase2db2@dbmigration.com. We will thank anyone who provides valuable suggestions with an autographed book, a complimentary copy of the CBT,

and a mention of her/his name in subsequent editions.

Managing Ever-Increasing Amounts of Data with IBM DB2 for z/OS: Using Temporal Data Management, Archive Transparency, and the DB2 Analytics Accelerator Mehmet Cuneys Goksu, Claire McFeely, Craig McKellar, Xiao Hui Wang, IBM Redbooks, 2015-10-20 IBM® DB2® Version 11.1 for z/OS® (DB2 11 for z/OS or just DB2 11 throughout this book) is the fifteenth release of DB2 for IBM MVSTM. The DB2 11 environment is available either for new installations of DB2 or for migrations from DB2 10 for z/OS subsystems only. This IBM Redbooks® publication describes enhancements that are available with DB2 11 for z/OS. The contents help database administrators to understand the new extensions and performance enhancements, to plan for ways to use the key new capabilities, and to justify the investment in installing or migrating to DB2 11. Businesses are faced with a global and increasingly competitive business environment, and they need to collect and analyze ever increasing amounts of data (Figure 1). Governments also need to collect and analyze large amounts of data. The main focus of this book is to introduce recent DB2 capability that can be used to address challenges facing organizations with storing and analyzing exploding amounts of business or organizational data, while managing risk and trying to meet new regulatory and compliance requirements. This book describes recent extensions to DB2 for z/OS in V10 and V11 that can help organizations address these challenges.

IBM DB2 Web Query for i: The Nuts and Bolts Hernando Bedoya, Jim Bainbridge, Rob Bestgen, Mike Cain, Doug Mack, Simona Pacchiarini, Kathryn Steinbrink, Lin Lin Su, Kevin Trisko, IBM Redbooks, 2017-05-11 Business Intelligence (BI) is a broad term that relates to applications that analyze data to understand and act on the key metrics that drive profitability in an enterprise. Key to analyzing that data is providing fast, easy access to it while delivering it in formats or tools that best fit the needs of the user. At the core of any BI solution are user query and reporting tools that provide intuitive access to data supporting a spectrum of users from executives to power users, from spreadsheet aficionados to the external Internet consumer. IBM® DB2® Web Query for i offers a set of modernized tools for a more robust, extensible, and productive reporting solution than the popular IBM Query for System i® tool (also known as IBM Query/400). IBM DB2 Web Query for i preserves investments in the reports that are developed with Query/400 by offering a choice of importing definitions into the new technology or continuing to run existing Query/400 reports as is. But, it also offers significant productivity and performance enhancements by leveraging the latest in DB2 for i query optimization technology. The DB2 Web Query for i product is a

web-based query and report writing product that offers enhanced capabilities over the IBM Query for iSeries product (also commonly known as Query/400). IBM DB2 Web Query for i includes Query for iSeries technology to assist customers in their transition to DB2 Web Query. It offers a more modernized, Java based solution for a more robust, extensible, and productive reporting solution. DB2 Web Query provides the ability to query or build reports against data that is stored in DB2 for i (or Microsoft SQL Server) databases through browser-based user interface technologies: Build reports with ease through the web-based, ribbon-like InfoAssist tool that leverages a common look and feel that can extend the number of personnel that can generate their own reports. Simplify the management of reports by significantly reducing the number of report definitions that are required through the use of parameter driven reports. Deliver data to users in many different formats, including directly into spreadsheets, or in boardroom-quality PDF format, or viewed from the browser in HTML. Leverage advanced reporting functions, such as matrix reporting, ranking, color coding, drill-down, and font customization to enhance the visualization of DB2 data. DB2 Web Query offers features to import Query/400 definitions and enhance their look and functions. By using it, you can add OLAP-like slicing and dicing to the reports or view reports in disconnected mode for users on the go. This IBM Redbooks® publication provides a broad understanding of what can be done with the DB2 Web Query product. This publication is a companion of DB2 Web Query Tutorials, SG24-8378, which has a group of self-explanatory tutorials to help you get up to speed quickly.

DB2 12 for z Optimizer Terry Purcell, IBM Redbooks, 2017-06-28

There has been a considerable focus on performance improvements as one of the main themes in recent IBM DB2® releases, and DB2 12 for IBM z/OS® is certainly no exception. With the high-value data retained on DB2 for z/OS and the z Systems platform, customers are increasingly attempting to extract value from that data for competitive advantage. Although customers have historically moved data off platform to gain insight, the landscape has changed significantly and allowed z Systems to again converge operational systems with analytics for real-time insight. Business-critical analytics is now requiring the same levels of service as expected for operational systems, and real-time or near real-time currency of data is expected. Hence the resurgence of z Systems. As a precursor to this shift, IDAA brought the data warehouse back to DB2 for z/OS and, with its tight integration with DB2, significantly reduces data latency as compared to the ETL processing that is involved with moving data to a stand-alone data warehouse environment. That change has opened up new opportunities for operational systems to extend the breadth of analytics processing without affecting the mission-critical system and integrating near real-time analytics within that system, all while maintaining the same z Systems qualities of service. Apache Spark on z/OS and Linux for System z also allow analytics in-place, in real-time or

near real-time. Enabling Spark natively on z Systems reduces the security risk of multiple copies of the Enterprise data, while providing an application developer-friendly platform for faster insight in a simplified and more secure analytics framework. How is all of this relevant to DB2 for z/OS? Given that z Systems is proving again to be the core Enterprise Hybrid Transactional/Analytical Processing (HTAP) system, it is critical that DB2 for z/OS can handle its traditional transactional applications and address the requirements for analytics processing that might not be candidates for these rapidly evolving targeted analytics systems. And not only are there opportunities for DB2 for z/OS to play an increasing role in analytics, the complexity of the transactional systems is increasing. Analytics is being integrated within the scope of those transactions. DB2 12 for z/OS has targeted performance to increase the success of new application deployments and integration of analytics to ensure that we keep pace with the rapid evolution of IDAA and Spark as equal partners in HTAP systems. This paper describes the enhancements delivered specifically by the query processing engine of DB2. This engine is generally called the optimizer or the Relational Data Services (RDS) components, which encompasses the query transformation, access path selection, run time, and parallelism. DB2 12 for z/OS also delivers improvements targeted at OLTP applications, which are the realm of the Data Manager, Index Manager, and Buffer Manager components (to name a few), and are not identified here. Although the performance measurement focus is based on reducing CPU, improvement in elapsed time is likely to be similarly achieved as CPU is reduced and performance constraints alleviated. However, elapsed time improvements can be achieved with parallelism, and DB2 12 does increase the percentage offload for parallel child tasks, which can further reduce chargeable CPU for analytics workloads.

Implementing Practical DB2 Applications Anthony S. Rudd,1990

Streamline Business with Consolidation and Conversion to DB2 for z/OS Paolo Bruni,Marcos Caurim,Elise Gotay,Susan Lawson,Glenn

McGeoch,Rebecca Poole,IBM Redbooks,2014-11-05 Time to market, flexibility, and cost reduction are among the top concerns common to all IT executives. If significant resource investments are placed in mature systems, IT organizations need to balance old and new technology. Older technology, such as non-IBM pre-relational databases, is costly, inflexible, and non-standard. Users store their information on the mainframe and thus preserve the skills and qualities of service their business needs. But users also benefit from standards-based modernization by migrating to IBM® DB2® for z/OS®. With this migration, users deliver new application features quickly and respond to changing business requirements more effectively. When migrating, the main decision is choosing between conversion and re-engineering. Although the rewards associated with rebuilding mature applications are high, so are the risks and customers that are embarking on a migration need that migration done quickly. In this IBM Redbooks® publication, we examine how to best approach the migration process by evaluating the environment, assessing the application as a conversion candidate, and identifying suitable tools. This publication is intended for IT decision makers and database administrators who are considering migrating their information to a modern database management system.
