Coping with Physical Illness Rudolf H. Moos,2012-12-06 This book discusses how human beings cope with serious physical illness and injury. A conceptual model for understanding the process of coping with the crisis of illness is provided, and basic adaptive tasks and types of coping skills are identified. The major portion of the book is organized around various types of physical illness. These physical illnesses, which almost all people face either in themselves or their family members, raise common relevant coping issues. The last few sections cover the crisis of treatment, emphasizing the importance of unusual hospital environments and radical new medical treatments, of stresses on professional staff, and of issues related to death and the fear of dying. The material highlights the fact that people can successfully cope with life crises such as major illness and injury, rather than the fact that severe symptoms and/or breakdowns sometimes occur.

The importance of support from professional caregivers, such as physicians, nurses, and social workers, and from family, friends, and other sources of help in the community, is emphasized. Many of the selections include case examples which serve to illustrate the material. Coping with Physical Illness has been broadly conceived to meet the needs of a diverse audience. There is substantial information about how human beings cope with illness and physical disability, but this material has never been collected in one place.

Space and the Architect Herman Hertzberger, 2010
The work of Herman Hertzberger is the subject of wide international esteem. 1991 first saw publication of Hertzberger's *Lessons for Students in Architecture*, an elaborated version of lectures he had given since 1973 at Delft University of Technology. This immensely successful book has gone through many reprints and has also been published in Japanese, German, Italian, Portuguese, Taiwanese, Dutch, Greek, Polish,

Iranian, Korean and Chinese. Space and the Architect is the second book written by Hertzberger. It charts the backgrounds to his work of recent years and the ideas informing it, drawing on a wide spectrum of subjects and designs by artists, precursors, past masters and colleagues, though with his own work persistently present as a reference. Space is its principal theme, physical space but also the mental or intellectual regions the architect calls upon during the process of designing. Once again Hertzberger's broad practical experience, his ideas and his seemingly inexhaustible 'library' of images are a major source of inspiration for anyone whose concern is the design of space.

International Advances in the Ecology, Zoogeography, and Systematics of Mayflies and Stoneflies F. R. Hauer, J. A. Stanford, R. L. Newell, 2008-06-24 The purpose of this volume is to encourage and facilitate focused research and provide a forum for scholarly exchange about the status of Mayfly and Stonefly science. Professor John Brittain, whose research is focused on freshwater entomology, especially egg development and life cycle strategies of Ephemeroptera and Plecoptera, presents a chapter reflecting on the quality of mayflies as good indicators of global warming and the quality of streams and lakes. Professor Emeritus Andrew Sheldon, whose interests have encompassed community and population ecology of aquatic animals over a span of more than 40 years, especially insects and fishes, explores topics of Scale and Hierarchy and the Ecology of

Plecoptera, discussing how studies emphasizing scale and perspective reveal importance of stoneflies to ecosystems. Other topics cover a broad base of disciplines including morphology, physiology, phylogeny, taxonomy, ecology and conservation. The chapters have been compiled into three sections for this volume: Ecology, Zoogeography and Systematics.

Chaos and Fractals: The Mathematics Behind the Computer Graphics Robert L. Devaney, Kathleen T. Alligood, 1989 Robert Devaney communicates his deep understanding as well as his enthusiasm for chaos, fractals, and dynamical systems. Starting at a level suitable for well-prepared high school students, he tells the mathematical story behind these fascinating topics. Equations and graphs are clearly shown with computer-generated characters, and Devaney's explanations are lucid and instructive. Illustrating the mathematics are forays into the colorful, unpredictable world of fractals and Julia sets. Devaney explains how the computer is used to generate the pictures and shows how the various colors are chosen for graphical representations ... Though the mathematical background required is elementary, those at the collegiate level and beyond will appreciate ... the clarity of exposition and the sheer beauty of the graphics.--Container.
