Organic and Pervasive Computing -- ARCS 2004 Christian Müller-Schloer, Theo Ungerer, Bernhard Bauer, 2004-02-12 Where is system architecture heading? The special interest group on Computer and Systems Architecture (Fachausschuss Rechner- und Systemarchitektur) of the German computer and information technology associations GI and ITG addressed this question and discussed it during two Future Workshops in 2002. The result in a nutshell: Everything will change but everything else will remain. Future systems technologies will build on a mature basis of silicon and IC technology, on well-understood programming languages and software engineering techniques, and on well-established operating systems and middleware concepts. Newer and still exotic but exciting technologies like quantum computing and DNA processing are to be watched closely but they will not be mainstream in the next decade. Although there will be considerable progress in these basic technologies, is there any major trend which unifies these diverse developments? There is a common denominator – according to the result of the two Future Workshops – which marks a new quality. The challenge for future systems technologies lies in the mastering of complexity. Rigid and inflexible systems, built under a

strict top-down regime, have reached the limits of manageable complexity, as has become obvious by the recent failure of several large-scale projects. Nature is the most complex system we know, and she has solved the problem somehow. We just haven't understood exactly how nature does it. But it is clear that systems designed by nature, like an anthill or a beehive or a swarm of birds or a city, are different from today's technical systems that have been designed by engineers and computer scientists.

Machine Learning Andrea Mechelli, Sandra Vieira, 2019-11-14 Machine Learning is an area of artificial intelligence involving the development of algorithms to discover trends and patterns in existing data; this information can then be used to make predictions on new data. A growing number of researchers and clinicians are using machine learning methods to develop and validate tools for assisting the diagnosis and treatment of patients with brain disorders. Machine Learning: Methods and Applications to Brain Disorders provides an up-to-date overview of how these methods can be applied to brain disorders, including both psychiatric and neurological disease. This book is written for a non-technical audience, such as neuroscientists, psychologists, psychiatrists, neurologists and health care practitioners. Provides a non-technical introduction to machine learning and applications to brain disorders Includes a detailed description of the most commonly used machine

learning algorithms as well as some novel and promising approaches Covers the main methodological challenges in the application of machine learning to brain disorders Provides a step-by-step tutorial for implementing a machine learning pipeline to neuroimaging data in Python

Database: Enterprise, Skills and Innovation Mike Jackson, David Nelson, Sue Stirk, 2005-06-16 The British National Conference on Databases (BNCOD) was established in 1980 as a forum for research into the theory and practice of databases. The original conference in the series took place at the University of Aberdeen. To be precise, this conference was in fact entitled ICOD which stood for International Conference on Databases. It was the intention, when the series began, that an ICOD would take place every two years, whilst a BNCOD would run in the years in between. As the record shows ICOD was only held in 1980 and 1983. The more junior conference has managed to acquire a lifetime much longer than that of its senior relative! If truth were known, however, BNCOD has, over the years, grown into ICOD and although the conference is still titled "British National," it is, in fact, an international conference that takes place on a yearly basis. Proof of this can be obtained simply by looking at the table of contents of these proceedings which clearly shows that the majority of papers presented at this year's conference came from contributors whose affiliations are outside the UK. Despite the range of papers on offer, BNCOD still retains its uniquely British flavor. The Programme Committee is drawn from UK academics and the conference is always

held at a British university (or in earlier years a polytechnic!).

Advances in Novel Drugs and Targets for Hepatic and Gastrointestinal Diseases Yong Gao,Aijun Qiao,Xiaoying Yang,2024-01-29 The global incidence of gastrointestinal and hepatic diseases has been gradually increasing in recent years, which seriously threatens human health and increases the economic burden. More importantly, gastrointestinal and hepatic malignancies have the highest incidence and mortality rates among all tumors, such as liver cancer, stomach cancer, colon cancer, and pancreatic cancer. There are also non-neoplastic diseases such as viral hepatitis, cirrhosis, nonalcoholic steatohepatitis, chronic atrophic gastritis, ulcerative colitis, and reflux esophageal disease that also affect patients' quality of life. Although progress has been made in the pathogenesis of gastrointestinal and hepatic diseases, and corresponding therapeutic drugs have been also developed, the specific mechanisms of the diseases are still not revealed and there is a lack of specific drugs. In view of this, this topic aims to explore new molecular mechanisms of pathogenesis and potential therapeutic agents and pharmacological effects of gastrointestinal and hepatic diseases.

Geophysical Data in Archaeology Armin Schmidt,2013-03-07 Anyone who has tried to archive archaeological geophysics data will have wondered what might be the most comprehensive and practical approach. This question is addressed by this Guide's extensively revised 2nd edition, which systematically

explores what should be included in an Archive, illustrated with relevant examples. A conceptual framework is developed that allows assembling data and meta-data so that they can be deposited with an Archiving Body. This framework is also mapped onto typical database structures, including OASIS and the English Heritage Geophysics Database. Examples show step-by step how an Archive can be compiled for deposition so that readers will be able to enhance their own archiving practice. Geophysical data are sometimes the only remaining record of buried archaeological features when these are destroyed during commercial developments (e.g. road schemes). To preserve them in an Archive can therefore be essential. However, it is important that data are made available in formats that can still be read in years to come, accompanied by documentation that gives meaningful archaeological context. This Guide covers the creation of the necessary metadata and data documentation. There is no point preserving data if they cannot be used again; therefore this Guide is essential for anyone using geophysical data.

Archaeology in the PPG16 Era Timothy Darvill, Kerry Barrass, Vanessa Constant, Ehren Milner, Bronwen Russell, 2018-12-31 The Archaeological Investigations Project (AIP), funded by English Heritage, systematically collected information about the nature and outcomes of more than 86,000

archaeological projects undertaken between 1990 and 2010. This volume looks at the long-term trends in archaeological investigation and reporting, places this work within wider social, political, and professional contexts, and reviews its achievements. Information was collected through visits to public and private organizations undertaking archaeological work. Planning Policy Guidance Note 16: Archaeology and Planning (known as PPG16), published in 1990, saw the formal integration of archaeological considerations with the UK town and country planning system that, and set out processes for informed decision-making and the implementation of post-determination mitigation strategies, defined a formative era in archaeological practice and established principles that underpin today's planning policy framework. The scale of activity represented – more 1000 excavations per year for most of the PPG16 Era – is more than double the level of work undertaken at peak periods during the previous three decades. This comprehensive review of the project presents a wealth of data. A series of case studies examines the illustrate different types of development project, revealing many ways in which projects develop, how archaeology is integrated with planning and execution, and the range of outputs documenting the process, and identified a series of ten important lessons that can be learned from these investigations. Looking into the post-PPG16 Era, the volume considers anticipated developments in the changing worlds of planning, property development, and archaeological practice and proposes the monitoring of

archaeological investigations in England using a two-pronged approach that involves self-reporting and periodic strategic overviews.

Future Multimedia Networking Andreas Mauthe,Sherali Zeadally,Eduardo Cerqueira,Marília Curado,2009-06-23 It is our great pleasure to welcome you to the Second International Workshop on Future Multimedia Networking (FMN). Following the first successful workshop (held in Cardiff, Wales) in 2008, this year's workshop continues the tradition of being a premier forum that gives researchers and practitioners a unique opportunity to share their experiences and discuss state-of-the-art research results and major recent accomplishments in the area of multimedia networking. In recent years, real-time multimedia services have contributed extensively to our life experience and are expected to be among the most important applications in the future Internet. The management of content distribution services and the efficient delivery of real-time multimedia services over diverse and heterogeneous wired and wireless systems remain a significant challenge for future multimedia networking systems. This year's workshop focused on various aspects of multimedia systems, content networking, and autonomous communication. A special emphasis was placed on upcoming autonomic content networks and technologies

that contribute to their development. The call for papers attracted 64 submissions from 32 countries for the main workshop. The Program Committee accepted 16 papers (an acceptance rate of 25%) that cover a range of topics, including wireless and ad-hoc networks in autonomic content networking, streaming and voice services, group and mul- party services, and quality in video and Internet services. This year we also had a Demonstration Session on Future Multimedia Networking for which 12 papers were accepted out of submissions received from over 15 countries. It is our sincere hope that the proceedings of this workshop will serve as a valuable reference for multimedia researchers and developers.

Database and Expert Systems Applications Vladimir Marik, Jiri Lazansky, 1993-08-25 This volume constitutes the proceedings of the 4th International Conference on Database and Expert Systems Applications (DEXA), held in Prague, Czech Republic, in September 1993. Traditionally the objective of the DEXA conferences is to serve as an international forum for the discussion and exchange of research results and practical experience among theoreticians and professionals working in the field of database and artificial intelligence technologies. Despite the fact that in the conference title the applications aspect is mentioned explicitly, the theoretical and the practical points of view in the field are well-balanced in the program of DEXA'93. The growing importance of the conference series is outlined by the remarkably high number of 269 submissions and by the support given by renown

organizations. DEXA'93 is held for the first time outside the former GDR in an East-European country, and is essentially contributing to the advancement of the East-West scientific cooperation in the field of database and AI systems. This proceedings contains the 78 contributed papers carefully selected by an international program committee with the support of a high number of subreferees. The volume is organized in sections on data models, distributed databases, advanced database aspects, database optimization and performance evaluation, spatial and geographic databases, expert systems and knowledge engineering, legal systems, other database and artificial intelligence applications, software engineering, and hypertext/hypermedia and user interfaces.

Wearable Brain-Computer Interfaces Pasquale Arpaia, Antonio Esposito, Ludovica Gargiulo, Nicola Moccaldi, 2023-06-15 This book presents a complete overview of the main EEG-based Brain-Computer Interface (BCI) paradigms and the related practical solutions for their design, prototyping, and testing. Readers will explore active, reactive, and passive BCI paradigms, with an emphasis on the operation for developing solutions, addressing the need for customization. Readers will familiarize themselves with the main steps for the realization of low-cost wearable BCIs which include: identification of the most suitable neuro signals for a specific application; definition of the hardware, firmware, and software, with a focus on wearable, non-invasive, and low-cost solutions; development of algorithms for data processing and classification; and, lastly, experimental campaigns for the validation of the prototyped solutions. BCI systems based on electroencephalography (EEG) are investigated and a complete overview of all BCI paradigms is offered. The aim of this book is to drive the reader, from the beginning to the end, along a research-and-development process of a

working BCI prototype. This book is a guide for designers, biomedical engineers, students, biotechnologists, and those in the biomedical instrumentation field that would like to conceive, design, prototype, and test an innovative low-cost wearable EEG-based BCI.
