Augustus De Morgan and the Logic of Relations Daniel D. Merrill, 2012-12-06 The middle years of the nineteenth century saw two crucial developments in the history of modern logic: George Boole's algebraic treatment of logic and Augustus De Morgan's formulation of the logic of relations. The former episode has been studied extensively; the latter, hardly at all. This is a pity, for the most central feature of modern logic may well be its ability to handle relational inferences. De Morgan was the first person to work out an extensive logic of relations, and the purpose of this book is to study this attempt in detail. Augustus De Morgan (1806-1871) was a British mathematician and logician who was Professor of Mathematics at the University of London (now, University College) from 1828 to 1866. A prolific but not highly original mathematician, De Morgan devoted much of his energies to the rather different field of logic. In his *Formal Logic* (1847) and a series of papers *On the Syllogism* (1846-1862), he attempted with great ingenuity to reformulate and extend the traditional syllogism and to systematize modes of reasoning that lie outside its boundaries. Chief among these is the logic of relations. De Morgan's interest in relations culminated in his important memoir, *On the Syllogism: IV and on the Logic of Relations*, read in 1860.

Evelyn Pickering De Morgan and the Allegorical Body Elise Lawton Smith, Evelyn De Morgan, 2002 This study of her work confirms that the idea of progress toward the afterlife is a recurrent motif, arising from a personal involvement in the movement of Spiritualism and paralleling the automatic writing passages in *The Result of an Experiment* (1909), anonymously published by Evelyn and her husband William De Morgan..

Graph Transformations Hartmut Ehrig, 2008-08-28 This book constitutes the refereed proceedings of the 4th International Conference on Graph Transformations, ICGT 2008, held in Leicester, UK, in September 2008. The 27 revised full papers presented together with 5 tutorial and workshop papers and 3 invited lectures were carefully selected from 57 submissions. All current aspects in graph drawing are addressed including hypergraphs and termgraph rewriting, applications of graph transformation, execution of graph transformations, compositional systems, validation and verification, graph languages and special transformation concepts, as well as patterns and model transformations. In addition the volume contains 17 short papers of the ICGT 2008 Doctoral Symposium.

Structures and Transformations in Modern British History David Feldman, Jon Lawrence, 2011-01-20 This major collection of essays challenges many of our preconceptions about British political and social history from the late eighteenth century to the present. Inspired by the work of Gareth Stedman Jones, twelve leading scholars explore both the long-term structures - social, political and intellectual - of modern British history, and the forces that have transformed those structures at key moments. The result is a series of insightful, original essays presenting new research within a broad historical context. Subjects covered include the consequences of rapid demographic change in the eighteenth and nineteenth centuries; the forces shaping transnational networks, especially those between Britain and its empire; and the recurrent problem of how we connect cultural politics to social change. An introductory essay situates Stedman Jones's work within the broader historiographical trends of the past thirty years, drawing important conclusions about new directions for scholarship in the twenty-first century.

The Semantic Web: Research and Applications York Sure, John Domingue, 2006-06-01 This book constitutes the refereed proceedings of the 3rd European Semantic Web Conference, ESWC 2006. The book presents 48 revised full papers with abstracts of 3 invited talks. The papers are organized in topical sections on ontology alignment, engineering, evaluation, evolution and learning, rules and reasoning, searching and querying, semantic annotation, semantic web mining and personalisation, semantic web services, semantic wiki and blogging, as well as trust and policies.

Logic Program Synthesis and Transformation - Meta-Programming in Logic Laurent Fribourg, Franco Turini, 1994-11-30 This volume constitutes the combined proceedings of the 4th International Workshops on Logic Program Synthesis and Transformation (LOPSTR '94) and on Meta-Programming (META '94), held jointly in Pisa, Italy in June 1994. This book includes

thoroughly revised versions of the best papers presented at both workshops. The main topics addressed by the META papers are language extensions in support of meta-logic, semantics of meta-logic, implementation of meta-logic features, performance of meta-logic, and several applicational aspects. The LOPSTR papers are devoted to unfolding/folding, partial deduction, proofs as programs, inductive logic programming, automated program verification, specification and programming methodologies.

British Logic in the Nineteenth Century Dov M. Gabbay, John Woods, 2008-03-10 The present volume of the Handbook of the History of Logic is designed to establish 19th century Britain as a substantial force in logic, developing new ideas, some of which would be overtaken by, and other that would anticipate, the century's later capitulation to the mathematization of logic. British Logic in the Nineteenth Century is indispensable reading and a definitive research resource for anyone with an interest in the history of logic. - Detailed and comprehensive chapters covering the entire range of modal logic - Contains the latest scholarly discoveries and interpretative insights that answer many questions in the field of logic

Anthropology and Climate Change Susan A. Crate, Mark Nuttall, 2016-03-31 The first edition of Anthropology and Climate Change (2009) pioneered the study of climate change through the lens of anthropology, covering the relation between human cultures and the environment from prehistoric times to the present. This second, heavily revised edition brings the material on this rapidly changing field completely up to date, with major scholars from around the world mapping out trajectories of research and issuing specific calls for action. The new edition introduces new "foundational" chapters—laying out what anthropologists know about climate change today, new theoretical and practical perspectives, insights gleaned from sociology, and international efforts to study and curb climate change—making the volume a perfect introductory textbook; presents a series of case studies—both new case studies and old ones updated and viewed with fresh eyes—with the specific purpose of assessing climate trends; provides a close look at how climate change is affecting livelihoods, especially in the context of economic globalization and the migration of youth from rural to urban areas; expands coverage to England, the Amazon, the Marshall Islands, Tanzania, and Ethiopia; re-examines the conclusions and recommendations of the first volume, refining our knowledge of what we do and do not know about climate change and what we can do to adapt.

Fundamental Proof Methods in Computer Science Konstantine Arkoudas, David

Musser, 2017-05-05 A textbook that teaches students to read and write proofs using Athena. Proof is the primary vehicle for knowledge generation in mathematics. In computer science, proof has found an additional use: verifying that a particular system (or component, or algorithm) has certain desirable properties. This book teaches students how to read and write proofs using Athena, a freely downloadable computer language. Athena proofs are machine-checkable and written in an intuitive natural-deduction style. The book contains more than 300 exercises, most with full solutions. By putting proofs into practice, it demonstrates the fundamental role of logic and proof in computer science as no other existing text does. Guided by examples and exercises, students are quickly immersed in the most useful high-level proof methods, including equational reasoning, several forms of induction, case analysis, proof by contradiction, and abstraction/specialization. The book includes auxiliary material on SAT and SMT solving, automated theorem proving, and logic programming. The book can be used by upper undergraduate or graduate computer science students with a basic level of programming and mathematical experience. Professional programmers, practitioners of formal methods, and researchers in logic-related branches of computer science will find it a valuable reference.

Cellular and Molecular Biology of Bone Masaki Noda, 2014-06-28 Written by well-known experts in their respective fields, this book synthesizes recent work on the biology of bone cells at the molecular level. Cellular and Molecular Biology of Bone covers the differentiation of these cells, the regulation of their growth and metabolism, and their death resorption. The authors' special comprehensive treatment of the cellular and molecular mechanisms of bone metabolism makes this book a unique and valuable tool. Cellular and Molecular Biology of Bone provides interested readers with concise state-of-the-art reviews in bone biology that will enlarge their scope and increase their appreciation of the field. Research in this area has intensified recently due to the increasing incidence of osteoporosis. The editor hopes an understanding of the basic biology of this disease will prove relevant to its prevention and treatment.

Logic-Based Program Synthesis and Transformation Gopal Gupta, Ricardo Peña, 2015-04-20 This book constitutes the thoroughly refereed post-conference proceedings of the 23rd International Symposium on Logic-Based Program Synthesis and Transformation, LOPSTR 2013, held in Madrid, Spain, in September 2013. The 13 revised full papers presented together with 2 invited talks were carefully reviewed and selected from 21 submissions during two rounds of reviewing and improvement. LOPSTR traditionally solicits papers in the areas of specification, synthesis, verification, transformation, analysis, optimization, composition, security, reuse, applications and tools, component-based software development, software architectures, agent-based software development, and program refinement.

Program Development by Specification and Transformation Bernd Krieg-Brückner, 1993-08-30 This volume gives a coherent presentation of the outcome of the project PROSPECTRA (PROgram development by SPECification and TRANSformation) that aims to provide a rigorous methodology for developing correct software and a comprehensive support system. The results are substantial: a theoretically well-founded methodology covering the whole development cycle, a very high-level specification and transformation language family allowing meta-program development and formalization of the development process itself, and a prototype development system supporting structure editing, incremental static-semantic checking, interactive context-sensitive transformation and verification, development of transformation (meta-) programs, version management, and so on, with an initial library of specifications and a sizeable collection of implemented transformations. The intended audience for this documentation is the academic community working in this and related areas and those members of the industrial community interested in the use of formal methods.

Logic-Based Program Synthesis and Transformation Moreno Falaschi, 2015-12-16 This book constitutes the thoroughly refereed post-conference proceedings of the 25th International Symposium on Logic-Based Program Synthesis and Transformation, LOPSTR 2015, held in Siena, Italy, in July 2015. The 21 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 30 submissions. The aim of the LOPSTR series is to stimulate and promote international research and collaboration on logic-based program development. LOPSTR is open to contributions in all aspects of logic-based program development, all stages of the software life cycle, and issues of both programming-in-the-small and programming-in-the-large.

Binary Polynomial Transforms and Non-Linear Digital Filters S. Agaian, Jaakko Astola, Karen Egiazarian, 1995-04-27 This work offers a unified presentation of the theory of binary polynomial transforms and details their numerous applications in nonlinear signal processing. The book also: introduces the Rademacher logical functions; considers fast algorithms for computing Rademacher and polynomial logical functions; focuses attention on general auto- and cross-correlation functions; and more.; The work is intended for applied mathematicians; electrical, electronics and other engineers; computer scientists; and upper-level undergraduate and graduate students in these disciplines.

Transition Metal Carbyne Complexes F.R. Kreißl, 1993-03-31 The chemistry of transition metal carbyne complexes is becoming of interest to inorganic as well as organic chemists because of its application to aspects of catalysis and metathesis. The 28 technical papers explore such aspects as glide nickel catalysis as an example of progress in acetylene polymerization, complexes of ruthenium

and osmium, and diversions en route to alkylidyne complexes of iron. Reproduced typescripts.
