Mapping Scientific Frontiers Chaomei Chen, 2013-07-30 This is an examination of the history and the state of the art of the quest for visualizing scientific knowledge and the dynamics of its development. Through an interdisciplinary perspective this book presents profound visions, pivotal advances, and insightful contributions made by generations of researchers and professionals, which portrays a holistic view of the underlying principles and mechanisms of the development of science. This updated and extended second edition: highlights the latest advances in mapping scientific frontiers examines the foundations of strategies, principles, and design patterns provides an integrated and holistic account of major developments across disciplinary boundaries “Anyone who tries to follow the exponential growth of the literature on citation analysis and scientometrics knows how difficult it is to keep pace. Chaomei Chen has identified the significant methods and applications in visual graphics and made them clear to the uninitiated. Derek Price would have loved this book which not only pays homage to him but also to the key players in information science and a wide variety of others in the sociology and history of science.” – Eugene Garfield “This is a wide ranging book on information visualization, with a specific focus on science mapping. Science mapping is still in its infancy and many intellectual challenges remain to be investigated and many of which are outlined in the final chapter. In this new edition Chaomei Chen has provided an essential text, useful both as a primer for new entrants and as a comprehensive overview of recent developments for the seasoned practitioner.” – Henry Small Chaomei Chen is a Professor in the College of Information Science and Technology at Drexel University, Philadelphia, USA, and a Changjiang Scholar at Dalian University of Technology, Dalian, China. He is the Editor-in-Chief of Information Visualization and the author of *Turning Points: The Nature of Creativity* (Springer, 2012) and *Information Visualization: Beyond the Horizon* (Springer, 2004, 2006).

Religion, Media, and Social Change Kennet Granholm, Marcus Moberg, Sofia Sjö, 2014-09-19 In an era of heightened globalization, macro-level transformations in the general socioeconomic and cultural makeup of modern societies have been studied in great depth. Yet little attention has been paid to the growing influence of media and mass-mediated popular culture on contemporary religious sensibilities, life, and practice. *Religion, Media, and Social Change* explores the correlation between the study of religion, media, and popular culture and broader sociological theorizing on religious change. Contributions devote serious attention to broadly-defined media including technologies, institutions, and social and cultural environments, as well as mass-mediated popular culture such as film, music, television, and computer games. This interdisciplinary collection addresses important theoretical and methodological questions by connecting the study of media and popular culture to current perspectives, approaches, and discussions in the broader sociological study of religion.

Improving Science Education Millar, John, 2000-12-01 This book takes stock of where we are in science education research, and considers where we ought now to be going. It explores how and whether the research effort in science education has contributed to improvements in the practice of teaching science and the science curriculum. It contains contributions from an international group of science educators. Each chapter explores a specific area of research in science education, considering why this research is worth doing, and its potential for development. Together they look candidly at important general issues such as the impact of research on classroom practice and the development of science education as a progressive field of research. The book was produced in celebration of the work of the late Rosalind Driver. All the principal contributors to the book had professional links with her, and the three sections of the book focus on issues that were of central importance in her work: research on teaching and learning in science; the role of science within the school curriculum and the nature of the science education we ought to be providing for young people; and the achievements of, and future agenda for, research in science education.

The Linguistic Analysis of Jokes Graeme Ritchie, 2004-03 This book starts from three observations. First, the use of humour is a complex, puzzling,

and idiosyncratically human form of behaviour (and hence is of scientific interest). Second, there is currently no theory of how humour works. Third, one useful step towards a theory of humour is to analyze humorous items in precise detail, in order to understand their mechanisms. The author begins by considering how to study jokes rigorously: the assumptions to make, the guidelines to follow and the pitfalls to avoid. A critique of other work on humour is also provided. This introduces some important concepts, and also demonstrates the lack of agreement about what a theory of humour should look like. The language devices used in various jokes, such as puns or humour based on misinterpretation, are analysed in detail. The central part of the book develops, and demonstrates, proposals for how best to analyze the workings of simple jokes. Finally, the author makes some general suggestions about the language devices that seem to be central to the construction of jokes. The Linguistic Analysis of Jokes will be invaluable for researchers and advanced students of humour research, linguistics and cognitive science.

Getting Started with Sensors Kimmo Karvinen,Tero Karvinen,2014-08-14 To build electronic projects that can sense the physical world, you need to build circuits based around sensors: electronic components that react to physical phenomena by sending an electrical signal. Even with only basic electronic components, you can build useful and educational sensor projects. But if you incorporate Arduino or Raspberry Pi into your project, you can build much more sophisticated projects that can react in interesting ways and even connect to the Internet. This book starts by teaching you the basic electronic circuits to read and react to a sensor. It then goes on to show how to use Arduino to develop sensor systems, and wraps up by teaching you how to build sensor projects with the Linux-powered Raspberry Pi.

Facing the Unknown Future Ina ter Avest,Cok Bakker,Julia Ipgrave,Silke Leonhard,Peter Schreiner,2020 During the 20 year history of the European Network for Religious Education through Contextual Approaches (ENRECA), several books have been published on the subject of Religious Education, from sociological, psychological or anthropological perspectives and always in the contextual settings of national educational frameworks and other specific culturally bound phenomena. Also, very often, an international comparative perspective was included. The shared goal was not so much to reflect on religion as such, and on its changing doctrines, institutions and prescriptions, but to try and understand religion in the specific European contexts of secularization and the plurality of life orientations, and to understand how religion becomes manifest in education in a variety of concrete policies and classroom practices, reflecting various social issues. This volume, marking the 20th anniversary of ENRECA, has a specific focus on the contextual dimension of time.

TRIFT Transfer of Innovation Into the Field of Foreign Trade Hartmut Müller,Bezirksregierung Köln,2013 The project TRIFT - a Leonardo-da-Vinci-Transfer of Innovation-Project 2010-2012 - has elaborated a competence matrix for the professional area «foreign trade», which consists of competence areas. This publication offers the theoretical background and the work process of the project as well as the documentation of the results.

Scripted Culture Ruedi Widmer,Ines Kleesattel,2018 When we look at the cultural public sphere through the lens of digitalization, a paradoxical picture emerges: the cultural public sphere is simultaneously exploding and imploding; the most essential objectives of the Enlightenment have been attained and yet are in danger; platforms and algorithms are vehicles both for self-determination and for heteronomy. Long-standing values from the Enlightenment values and new realities, the citizen and the consumer, rational systems of humans and machines alike are separate and yet at the same time inextricable from each other in this picture.

Distrusting Educational Technology Neil Selwyn,2013-11-26 Distrusting Educational Technology critically explores the optimistic consensus that has arisen around the use of digital technology in education. Drawing on a variety of theoretical and empirical perspectives, this book shows how apparently neutral forms of educational technology have actually served to align educational provision and practices with neo-liberal values, thereby

eroding the nature of education as a public good and moving it instead toward the individualistic tendencies of twenty-first century capitalism. Following a wide-ranging interrogation of the ideological dimensions of educational technology, this book examines in detail specific types of digital technology in use in education today, including virtual education, 'open' courses, digital games, and social media. It then concludes with specific recommendations for fairer forms of educational technology. An ideal read for anyone interested in the fast-changing nature of contemporary education, *Distrusting Educational Technology* comprises an ambitious and much-needed critique.

Deep Mediatization Andreas Hepp, 2019-12-06 Andreas Hepp takes an integrative look at one of the biggest questions in media and communications research: how digital media is changing society. Often, such questions are discussed in isolation, losing sight of the overarching context in which they are situated. Hepp has developed a theory of the re-figuration of society by digital media and their infrastructures, and provides an understanding of how profound today's media-related changes are, not only for institutions, organizations and communities, but for the individual as well. Rooted in the latest research, this book does not stop at a description of media-related change; instead, it raises the normative challenge of what deep mediatization should look like so that it might just stimulate a 'good life' for all. Providing original and critical research, the book introduces deep mediatization to students of media and cultural studies, as well as neighboring disciplines like sociology, political science and other cognate disciplines.

The Merry Misogynist Colin Cotterill, 2011-07-05 In poverty-stricken 1978 Laos, a man with a truck from the city was "somebody," a catch for even the prettiest village virgin. The corpse of one of these bucolic beauties turns up in Dr. Siri's morgue and his curiosity is piqued. The victim was tied to a tree and strangled but she had not, as the doctor had expected, been raped, although her flesh had been torn. And though the victim had clear, pale skin over most of her body, her hands and feet were gnarled, callused, and blistered. On a trip to the hinterlands, Siri discovers that the beautiful female corpse bound to a tree has already risen to the status of a rural myth. This has happened many times before. He sets out to investigate this unprecedented phenomenon—a serial killer in peaceful Buddhist Laos—only to discover when he has identified the murderer that not only pretty maidens are at risk. Seventy-three-year-old coroners can be victims, too. From the Hardcover edition.

What is Web 2.0 Tim O'Reilly, 2009-09-23 The concept of Web 2.0 began with a conference brainstorming session between O'Reilly and MediaLive International. Dale Dougherty, web pioneer and O'Reilly VP, noted that far from having crashed, the web was more important than ever, with exciting new applications and sites popping up with surprising regularity. What's more, the companies that had survived the collapse seemed to have some things in common. Could it be that the dot-com collapse marked some kind of turning point for the web, such that a call to action such as Web 2.0 might make sense? We agreed that it did, and so the Web 2.0 Conference was born. In the year and a half since, the term Web 2.0 has clearly taken hold, with more than 9.5 million citations in Google. But there's still a huge amount of disagreement about just what Web 2.0 means, with some people decrying it as a meaningless marketing buzzword, and others accepting it as the new conventional wisdom. This article is an attempt to clarify just what we mean by Web 2.0.

The Tower Uwe Tellkamp, 2014 In derelict Dresden a cultivated, middle-class family does all it can to cope amid the Communist downfall. This striking tapestry of the East German experience is told through the tangled lives of a soldier, surgeon, nurse and publisher. With evocative detail, Uwe Tellkamp masterfully reveals the myriad perspectives of the time as people battled for individuality, retreated to nostalgia, chose to conform, or toed the perilous line between East and West. Poetic, heartfelt and dramatic, *The Tower* vividly resurrects the sights, scents and sensations of life in the GDR as it hurtled towards 9 November 1989. Uwe Tellkamp was born in 1968 in Dresden. After completing his military service, he lost his place to study medicine on the grounds of 'political sabotage'. He was arrested in 1989, but went on to study medicine in Leipzig, Dresden and New York, later becoming a surgeon. He has won numerous regional prizes for poetry, as well as the Ingeborg Bachmann Prize for *The Sleep in the Clocks*. In 2008, he

won the German Book Prize for *The Tower*.

Communicative Figurations Andreas Hepp, Andreas Breiter, Uwe Hasebrink, 2017-11-27 This open access volume assesses the influence of our changing media environment. Today, there is not one single medium that is the driving force of change. With the spread of various technical communication media such as mobile phones and internet platforms, we are confronted with a media manifold of deep mediatization. But how can we investigate its transformative capability? This book answers this question by taking a non-media-centric perspective, researching the various figurations of collectivities and organizations humans are involved in. The first part of the book outlines a fundamental understanding of the changing media environment of deep mediatization and its transformative capacity. The second part focuses on collectivities and movements: communities in the city, critical social movements, maker, online gaming groups and networked groups of young people. The third part moves institutions and organizations into the foreground, discussing the transformation of journalism, religion, politics, and education, whilst the fourth and final part is dedicated to methodologies and perspectives.

No Ordinary Disruption Richard Dobbs, James Manyika, Jonathan Woetzel, 2016-08-30 Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global Institute, *No Ordinary Disruption: The Four Forces Breaking all the Trends* is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy -- often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up poorer than their parents. What sets *No Ordinary Disruption* apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China -- Tianjin -- will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life -- facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.

The New Spirit of Capitalism Luc Boltanski, Eve Chiapello, 2005 A century after the publication of Max Weber's *The Protestant Ethic and the Spirit of Capitalism*, a major new work examines network-based organization, employee autonomy and post-Fordist horizontal work structures.
