Sport and International Understanding M. Ilmarinen,P.V. Komi,A. Koskela,P. Seppänen,R. Telama,P. Vuolle,2012-12-06 In recent years concern has been growing about the preservation of world peace, while over the past few decades there has been a vast increase in the amount of international sporting activity and hence more opportunities to advance international understanding and peace. It is this situation which caused the Congress on Sport and International Understanding to be convened, the idea for it first having arisen after the Helsinki Conference on Security and Co-operation in Europe in 1975. The venue for the Congress was, as for the Conference on Security and Co-operation, Finlandia Hall. It was held under the auspices of the International Council of Sport and Physical Education (ICSPE) and was organised by the Finnish member organisations, the Finnish Society for Research in Sport and Physical Education (organising association), Finnish Central Sport Federation (SVUL) and the Workers' Sport Federation (TUL). The aim of the Congress was to analyse the role of sport in advancing international understanding and to promote research in this field. In addition, the Congress wished to offer researchers and those involved in sporting activities an opportunity to exchange ideas about the themes under discussion. The aim of the Congress was to find the answers to the following questions: 1. What forms does international co-operation take in present-day competitive and top-level sport, sports for all and other forms of physical culture? What is its historical background and future? 2.

Extracellular Composite Matrices in Arthropods Ephraim Cohen,Bernard Moussian,2016-09-12 Emphasis is placed on the elaborate cuticular matrices in insects and crustaceans, spider and insect silks, silicles of phytophagous and blood-feeding arthropods as well as on secretions of male and female accessory glands. Focus is placed largely on insects, due to the extensive body of published research that in part is the result of available whole genome sequences of several model species (in particular *Drosophila melanogaster*) and accessible ESTs for other species. Such advances have facilitated fundamental insights into genomic, proteomic and molecular biology-based physiology. This new volume contains comprehensive contributions on extracellular composite matrices in arthropods. The building blocks of such matrices are formed in and secreted by single layered epithelial cells into exterior domains where their final assembly takes place. Additionally, the unique mechanical properties of natural biocomposites like chitin/chitosan, the crustacean mineralized exoskeleton, the pliant protein resilin or insect and spider silks, have inspired basic and applied research that yield sophisticated biomimetics and structural biocomposite hybrids important for future industrial and biomedical use. In summary, this book provides an invaluable vast source of basic and applied information for a plethora of scientists as well as textbook for graduate and advanced undergraduate students.
