The Stryker Brigade Combat Team Alan J. Vick, David T. Orletsky, Bruce R. Pirnie, Seth G. Jones, 2002-12-24 Examines alternative means to decrease the deployment time for the new Army medium-weight brigade, comparing air and sealift from the United States with air and fast (but short-range) sealift from forward bases or preposition sites. Historical experience and an assessment of U.S. regional interests are used to determine how much warning time the United States typically has before major force deployments and where it is most likely to deploy such forces

Army Deployment and Redeployment (FM 3-35) Department of the Army, 2012-11-02 FM 3-35, "Army Deployment and Redeployment," is the Army's authoritative doctrine for planning, organizing, executing, and supporting deployment and redeployment. This manual represents the culmination of our efforts to consolidate all deployment doctrine (FM 100-17, FM 100-17-3, FM 3-35.4, FM 100-17-5, and FM 4-01.011) into a single manual to align Army deployment doctrine with joint deployment doctrine. FM 3-35 has five chapters and 12 appendices. Chapter 1 presents an overview of force projection and the deployment process. Chapter 2 spells out activities units engage in prior to being alerted for deployment. Chapter 3 outlines the procedures involved in the movement of units from home station to the port of embarkation (POE) and from the POE to the port of debarkation (POD). Chapter 4 details the process of reception, staging, onward movement, and integration (RSOI). Chapter 5 explains redeployment. New appendices were developed in response to requests from the field. These appendices cover installation support, duties of the Mobility Officer, organization and operation of an arrival/departure airfield control group, unit movement officer (UMO), and unit movement plan, and the influence of senior commanders on deployment. Joint Publication 3-35 describes the joint process in terms of planning; pre-deployment; movement; and joint reception,

staging, onward movement, and integration (JRSOI). On the other hand, the Army process is defined by the phases of pre-deployment; movement (includes the fort to port and port to port segments); and RSOI. Planning occurs continuously throughout the entire process. In the current operating environment of persistent conflict, the rotation of Army forces is similar to the deployment process described in this manual.

Army Deployment and Redeployment Department of the Army, 2010-04-21 The transformation of the Army was based on an environment characterized by a wider spectrum of potential contingencies, increased uncertainty, and a more complex range of operational conditions. The situation demanded swift action by the United States. The Army transformation plan focused on providing the joint force commander with expeditionary capability with forces organized and equipped to be modular, versatile, and rapidly deployable with institutions capable of supporting them. Understanding and applying the deployment process outlined in this manual is essential to achieving the desired expeditionary characteristics. FM 3-35 is the Army's authoritative doctrine for planning, organizing, executing, and supporting deployment and redeployment. This manual represents the culmination of our efforts to consolidate all deployment doctrine (FM 100-17, FM 100-17-3, FM 3-35.4, FM 100-17-5, and FM 4-01.011) into a single manual to align Army deployment doctrine with joint deployment doctrine.FM 3-35 has five chapters and 12 appendices.* Chapter 1 presents an overview of force projection and the deployment process.* Chapter 2 spells out activities units engage in prior to being alerted for deployment.* Chapter 3 outlines the procedures involved in the movement of units from home station to the port of embarkation (POE) and from the POE to the port of debarkation (POD).* Chapter 4 details the process of reception, staging, onward movement, and integration(RSOI).* Chapter 5 explains redeployment.

Expeditionary Civilians Molly Dunigan, Susan S. Everingham, Todd Nichols, Michael Schwille, Susanne Sondergaard, 2016 U.S. Department of Defense (DoD) Directive 1404.10 (2009) mandates a reliance on military and civilian capabilities to meet national security requirements and requires the identification of a subset of civilians to be organized, trained, and equipped to respond to expeditionary requirements. DoD policy on expeditionary civilians has yet to be fully implemented, however. This end-to-end review and analysis of DoD civilian deployment aims to inform DoD's policy and practice for using deployable civilians to meet mission needs ten to 20 years into the future. It assesses the viability of DoD's civilian deployment framework in meeting its current policy goals, identifies gaps between policy and practice, and proposes a systematic approach to developing and maintaining a civilian deployment capability that meets the current and future needs of U.S. combatant commands. The findings and conclusions are informed by a detailed policy review and interviews with more than 80 officials from organizations that deploy civilians, including DoD, the military services, the combatant commands, and analogous U.S. and foreign government agencies. The study was the first to review in detail combatant command requirements for expeditionary civilian capabilities. Looking ahead, lessons and insights from analogous organizations' approaches to civilian deployment could inform DoD civilian deployment policy and practice--Back cover.

<u>Command Deployment Discipline Handbook</u> United States Army,2014-12-08 The Command Deployment Discipline Program (CDDP) is a commander's tool designed to enhance unit deployment readiness. This handbook is a combination of doctrinal and regulatory tasks that address Army standards, fundamentally focused on equipment movement and associated tasks from division to company level, to include installation tasks. Following 13 years of conflict, our Army is transitioning to an expeditionary force that is primarily based in the continental United States. Many of our Army's

junior leaders, having become accustomed to rotationally deploying in support of Operation Iraqi Freedom/Operation New Dawn and Operation Enduring Freedom (Afghanistan), have limited experience in executing short-notice deployments. Deployments in the recent past have been characterized by units receiving equipment in theater rather than deploying all of their organic equipment from home station, as well as the robust use of contractors throughout the deployment and reception, staging, onward-movement, and integration process. In many cases, the fundamental skills required to execute short-notice deployments involving all of a unit's organic equipment have atrophied over the past years.

Reconfiguring Footprint to Speed Expeditionary Aerospace Forces Deployment ,2002 Since the end of the Cold War, the U.S. Air Force has frequently been deployed overseas, often on short notice, in support of crises ranging from humanitarian relief to Operation Desert Storm. To meet these challenges, the Air Force has implemented a new operational concept, that of the Expeditionary Aerospace Force (EAF), which replaces the permanent forward presence of airpower with a force that can deploy quickly from the continental United States (CONUS) to Forward Operating Locations (FOLs) in response to a crisis, commence operations immediately on arrival, and sustain those operations as needed. In the words of Air Force Vision 2020, We will be able to deploy ... in 48 hours, fast enough to curb many crises before they escalate. However, quickly deploying the support structure for aerospace operations is not easy: The consensus of most studies is that moving the support for a force package to an FOL with minimal infrastructure within the notional time frame of 48 hours is almost certainly infeasible given current support process organization and equipment. The equipment and people required to support a combat deployment is simply very heavy. One primary result has been a call for footprint reduction, i.e., physically reducing the amount of materiel and personnel

actually deployed to FOLs. However, for many areas such as munitions, significant mass reduction will require substantial investment in new technology and development: replacing a 2000-lb bomb with a smaller munition may require more sophisticated guidance, new explosives with more power, and other modifications such as new techniques for penetration.

The U.S. Rapid Deployment Forces David Eshel,1985 Describes the U.S. Rapid Deployment Forces and its central command. Also covers military capabilities, weapons, combat actions, and training exercises.

The Stryker Brigade Combat Team. Rethinking Strategic Responsiveness and Assessing Deployment Options, 2002 Historically, to deter and defeat major threats in Europe and Asia, the United States has relied on forward-deployed Army and Air Force forces, Navy and Marine Corps forces afloat, long-range aircraft in the continental United States (CONUS), prepositioned unit sets in key regions, and reinforcing units from CONUS. For short-warning crises in other regions, Marine Expeditionary Units, the 82nd Airborne Division, Special Operations Forces, and Air Force/Navy air would be combined as appropriate to provide a limited capability that has usually been sufficient for noncombat evacuations and other lesser contingencies. The United States has not had the ability to deploy large joint forces globally from North America in a matter of days or weeks: The transportation challenge has been simply too great. Army transformation efforts seek to establish that ability, turning the Army from the Legacy Force made up of well-equipped heavy warfighting forces, which are difficult to deploy strategically, and rapidly responding light forces, which lack staying power against heavy mechanized forces, to, first, an Interim Force of Stryker Brigade Combat Teams' brigade-sized forces equipped with a family of current generation medium weight wheeled armored vehicles--then, 15 to 20 years out, the Objective Force, equipped with the Future Combat System

(FCS), a medium weight tank that the Army hopes can be as survivable and lethal as the 70-ton M-1 tank.

The Combat Service Support and Deployment SMARTbook Norman M. Wade, 2005-01-01 An Introduction to Small Uas Deployment for Emergency Responders Cabezon Group, Gus Calderon, Jonathan Rupprecht, Kevin Rolfe, 2017-01-31 Civilian drones are coming of age. Years of development in the recreational sector have allowed manufacturers to significantly improve the reliability, capability and performance of drones. Lower acquisition costs and increased public acceptance has also led to the proliferation of drones, formally known as small unmanned aircraft systems (UAS). In August 2016, the Federal Aviation Administration (FAA) approved regulations for the commercial use of drones and extended the applicability of these regulations to the public sector. Today, the use of drones is being considered by public and private organizations for a multitude of applications, both in routine day-to-day operations and for emergency response. Despite the many technological advances, specific standards for drone flight training and program development are woefully lacking. The FAA's only requirement to obtain a drone pilot license is the successful completion of an independent study, knowledge-based written test. Currently, no standardized practical test exists. With hundreds of different drones available, the challenge of developing both a training and maintenance program for any organization becomes a daunting task. Guidance for drone program development is best served by subject matter experts in commercial aviation, drone law, public safety and public service organizations that can develop an emergency management program. The authors of An Introduction to Small UAS Deployment for Emergency Responders: Considerations for Organizational Requirements and Operations have developed recommendations for flight training and maintenance that help ensure the creation of a safe and efficient drone program. This material is

based on the authors' experience, from operating a variety drones to successfully accomplishing mission assignments and developing documentation. While the ability to collect data with drones can save emergency responders considerable effort and expense, the program will only be successful with properly trained personnel utilizing professionally maintained equipment under a coordinated Incident Action Plan (IAP) involving other response agencies. A properly structured drone program will result in rapid deployment, better accessibility and accountability, and dependable resilience under blue skies as well as during incidents involving an emergency response. Within this first publication, topics include the following:* Introduction to drone types and technology* Drone operations in the National Airspace System* Drone applications for all the Mission Areas of Emergency Management * Drone program structure for the public and private sector * Drone flight operations and maintenanceAn Introduction to Small UAS Deployment for Emergency Responders: Considerations for Organizational Requirements and Operations was written with the aim of providing all organizations with fundamental information about drones, regulations, and program management. This publication is the first in a series that helps prepare organizations and traditional emergency responders utilize drone technology in a safe and efficient manner.

Estimating Air Force Deployment Requirements for Lean Force Packages Patrick Mills, James A. Leftwich, Kristin Van Abel, Jason Mastbaum, 2018-02 This report describes a methodology and prototype tool--the Lean Strategic Tool for the Analysis of Required Transportation (Lean-START)--that can explore trade-offs among capability (or risk), speed, and cost to create force packages for deployment.

Joint Publication Jp 3-35 Deployment and Redeployment Operations January 2018 United States Government US Army, 2018-09-25 This manual, Joint Publication JP 3-35 Deployment and Redeployment Operations January 2018, sets forth joint doctrine to govern the activities and performance of the Armed Forces of the United States in joint operations, and it provides considerations for military interaction with governmental and nongovernmental agencies, multinational forces, and other interorganizational partners. It provides military guidance for the exercise of authority by combatant commanders and other joint force commanders (JFCs), and prescribes joint doctrine for operations and training. It provides military guidance for use by the Armed Forces in preparing and executing their plans and orders. It is not the intent of this publication to restrict the authority of the JFC from organizing the force and executing the mission in a manner the IFC deems most appropriate to ensure unity of effort in the accomplishment of objectives. Joint doctrine established in this publication applies to the Joint Staff, commanders of combatant commands, subordinate unified commands, joint task forces, subordinate components of these commands, the Services, and combat support agencies. The guidance in this publication is authoritative; as such, this doctrine will be followed except when, in the judgment of the commander, exceptional circumstances dictate otherwise. If conflicts arise between the contents of this publication and the contents of Service publications, this publication will take precedence unless the CICS, normally in coordination with the other members of the Joint Chiefs of Staff, has provided more

current and specific guidance. Commanders of forces operating as part of a multinational (alliance or coalition) military command should follow multinational doctrine and procedures ratified by the United States. For doctrine and procedures not ratified by the US, commanders should evaluate and follow the multinational command's doctrine and procedures, where applicable and consistent with US law, regulations, and doctrine.

Supporting Air and Space Expeditionary Forces Don Snyder,2006 The Department of Defense in recent years has shifted from threat-based planning to structuring its forces to provide a range of capabilities. As such, the need has arisen for new methods to assess the Air Force's manpower and materiel deployment capabilities. The authors outline a method for assessing Air and Space Expeditionary Force capabilities given certain policies and resource levels, and they illustrate how this method can contribute to the capabilities-based planning environment.

Deployment and Redeployment Operations Joint Chiefs of Staff,2007-05-07 1. Scope This publication provides doctrine and principles for planning and executing deployment, joint reception, staging, onward movement, and integration (JRSOI), and redeployment of the Armed Forces of the United States. It explains the deployment, JRSOI, and redeployment processes, and planning and execution considerations that may impact United States force projection operations. It discusses the responsibilities and command relationships for supported and supporting combatant commands and Services, and the interaction with other Department of Defense and federal agencies, foreign nations, allies, multinational organizations, and other groups. 2. Purpose This publication has been prepared under the direction of the Chairman of the Joint Chiefs of Staff (CJCS). It sets forth joint doctrine to govern the activities and performance of the Armed Forces of the United States in operations and provides the doctrinal basis for interagency coordination and for US military involvement in

multinational operations. It provides military guidance for the exercise of authority by combatant commanders (CCDRs) and other joint force commanders (JFCs) and prescribes joint doctrine for operations and training. It provides military guidance for use by the Armed Forces in preparing their appropriate plans. It is not the intent of this publication to restrict the authority of the JFC from organizing the force and executing the mission in a manner the IFC deems most appropriate to ensure unity of effort in the accomplishment of the overall objective. 3. Application a. Speed and Power: Toward an Expeditionary Army, 2003 This report explores ways in which the Army might improve its ability to contribute to the prompt, global power-projection capability of the United States. By that the authors mean the strategic responsiveness of early-entry forces in situations where time is critical. Through a case study based upon the Army's new Stryker Brigade

Combat Team (SBCT), the authors examine two components of early-entry force strategic responsiveness: rapidly tailoring a mission-focused force package and moving the force. The report begins by analyzing options, given existing technology, for improving the deployment time of Army units. Then it examines how the Army might improve its ability to facilitate the rapid-deployment initiation of joint, mission-tailored packages of capabilities. In essence, there are two problems: initiating deployment of the right force capabilities and then getting these capabilities where they need to be as quickly as possible. Specific issues examined in the report include forward basing, new concepts in prepositioning, significant but underappreciated opportunities in process improvement, and speeding the delivery of initial operating capabilities through deployment phasing and improved planning. The research offers an approach for leveraging force modularity concepts to transition to a capabilities-based, rapid mission, force-tailoring construct. (3 tables, 38 figures, 32 refs.).
