**Historical Dictionary of Middle Eastern Intelligence** Ephraim Kahana, Muhammad Suwaed, 2009-04-13 Given the rivalries and suspicions prevailing in the Middle East, it is not surprising that most of these states are very concerned about espionage and infiltration. With the additional threat of terrorism, nuclear weapons, a large U.S. military presence, and the Arab-Israeli conflict, the result is an impressively busy intelligence industry, proportionately larger and more extensive than in most other regions. The Historical Dictionary of Middle East Intelligence addresses intelligence issues in the region from ancient history and the Middle Ages through modern times, covering the decline of the Ottoman Empire, intelligence activity in the Middle East during and between the two world wars, and the interplay between colonial and local intelligence and counterintelligence agencies of the period. It also presents the relatively new fundamentalist terrorist organizations that have had a significant impact on international relations and on the structure and deployment of intelligence, counterintelligence, and other security organs in the Middle East today. With a chronology, an introductory essay, and over 300 cross-referenced dictionary entries on important events and key organizations involved in all aspects of intelligence gathering and analysis, as well as the biographies of key players, this is an important reference on the current situation in the Middle East.

*RoboCup 2010: Robot Soccer World Cup XIV* Javier Ruiz-del-Solar, Eric Chown, Paul G. Ploeger, 2011-04-09 This book includes the thoroughly refereed post-conference proceedings of the 14th RoboCup International Symposium, held in Singapore, in June, 2010 - representing the scientific tracks structured in four sessions entitled simulation and rescue robots; robot perception and localization; robot motion and humanoid robots; and human robot interaction and semantic scene analysis. The 20 revised full papers and 16 revised short papers presented were carefully reviewed and selected from 78 submissions. Documenting the research advances of the RoboCup community since the predecessor symposium, this book constitutes a valuable source of reference and inspiration for R&D professionals interested in RoboCup or in robotics and distributed AI more generally.

*Cardiomyocytes in Health and Disease* Chandrasekharan C. Kartha, 2021-09-13 This book is a treatise on cardiomyocytes, the most important cell for the contractile function of the heart. There has been significant progress in our understanding of the function-related structure, developmental processes and their determinants, mechanisms of cell cycle regulation, post-natal growth, energy metabolism, and reversible and irreversible response of cardiomyocytes to diverse forms of physiological stress and injury. There is also more clarity on the alterations in the biological mechanisms in cardiomyocytes that lead to pathological states and the changes in the cells that occur secondary to disease conditions. Thanks to these advances in knowledge, there have been great gains in attempts to identify disease biomarkers and therapeutic targets for better management of patients with heart diseases. Possibilities to induce regeneration or proliferation of cardiomyocytes and thus repair and or regenerate the damaged heart are also on the horizon.

*The Migration of Constitutional Ideas* Sujit Choudhry, 2007-01-18 The migration of constitutional ideas across jurisdictions is one of the central features of contemporary constitutional practice. The increasing use of comparative jurisprudence in interpreting constitutions is one example of this. In this 2007 book, leading figures in the study of comparative constitutionalism and comparative constitutional politics from North America, Europe and Australia discuss the dynamic processes whereby constitutional systems influence each other. They explore basic methodological questions which have thus far received little attention, and examine the complex relationship between national and supranational constitutionalism - an issue of considerable contemporary interest in Europe. The migration of constitutional ideas is discussed from a variety of methodological perspectives - comparative law, comparative politics, and cultural studies of law - and contributors draw on case-studies from a wide variety of jurisdictions: Australia, Hungary, India, South Africa, the United Kingdom, the United States, and Canada.

*Diabetes* Shamim I. Ahmad, 2013-04-12 Diabetes is a complex disease and is also one of the most common. It is very difficult to reach an accurate estimate for the global prevalence of diabetes since the standards and methods of data collection vary widely in different parts of the world. In addition, many potential sufferers are not included in the count because according to an estimate about 50% of cases remain undiagnosed for up to 10 years. However, according to an estimate for 2010, globally, there are about 285 million people (amounting to 6.4% of the adult population) suffering from this disease. This number is estimated to increase to 439 million by 2030 if no cure is found. The general increase in life expectancy, leading to an ageing population, and the global rise in obesity are two main reasons for the increase. With the basic platform set, Editor presents his views and advice to the readers, especially to diabetic patients suffering from T2DM, on the basis of his observations and information collected from other diabetics.

*Tears of the Cheetah* Dr. Stephen J. O'Brien, 2015-10-27 The history of life on Earth is dominated by extinction events so numerous that over 99.9% of the species ever to have existed are gone forever. If animals could talk, we would ask them to recall their own ancestries, in particular the secrets as to how they avoided almost inevitable annihilation in the face of daily assaults by predators, climactic cataclysms, deadly infections and innate diseases. In *Tears of the Cheetah*, medical geneticist and conservationist Stephen J. O'Brien narrates fast-moving science adventure stories that explore the mysteries of survival among the earth's most endangered and beloved wildlife. Here we uncover the secret histories of exotic species such as Indonesian orangutans, humpback whales, and the imperiled cheetah-the world's fastest animal which nonetheless cannot escape its own genetic weaknesses. Among these genetic detective stories we also discover how the Serengeti lions have lived with FIV (the feline version of HIV), where giant pandas really come from, how bold genetic action pulled the Florida panther from the edge of extinction, how the survivors of the medieval Black Death passed on a genetic gift to their descendents, and how mapping the genome of the domestic cat solved a murder case in Canada. With each riveting account of animal resilience and adaptation, a remarkable parallel in human medicine is drawn, adding yet another rationale for species conservation-mining their genomes for cures to our own fatal diseases. *Tears of the Cheetah* offers a fascinating glimpse of the insight gained when geneticists venture into the wild.

*Neurocardiology* J. Andrew Armour, Jeffrey L. The final chapters focus on the role that autonomic neurons play in the maintenance of cardiac function in the conscious state as well as in two major clinical conditions, dysrhythmias and heart failure.

*Perspectives on Global Constitutionalism* Gábor Halmai, 2014 This work investigates the problem of how constitutionality and the internationally increasingly accepted global principles of human rights can influence state action, which is still considered sovereign. International human rights regulations are of pre-eminence in this context since they are virtually, by definition, based on limitations of national constitutional law, in order to assert internationally shared constitutional principles. The evolution of international human rights - triggered by the Holocaust trauma - was the first serious challenge pertaining to any kind of domestic action within the sovereignty of states. This new type of global morality that manifests itself in international relations largely owes itself to the emergence of the notion that certain states bear responsibility for the horrors of World War II. The first part will review the resultant limitation of sovereignty in the context of the creation, amendment, and interpretation of national constitutions, seeking to answer the questions of how far the process of internationalization of (national) constitutional law has progressed. The second part will address the constitutionalization of the small segment of international law that manifest itself in the assertion of international human rights standards in the case law of national courts.
