Over and Under the Canyon Kate Messner,2021 Over the canyon, the sun scalds the air, and bakes the desert mud to stone. But under the shade of the canyon hides another world, where bighorn sheep bound from rock to rock on the hillside, roadrunners make their nests in sturdy cacti, and banded geckos tuck themselves into the shelter of the sand. This book takes readers on a journey through the wonders concealed in the curves of the canyon, and all the secret life hidden in its arms--

The Desert John Charles Van Dyke,1920

Coyote's Canyon Terry Tempest Williams,1989 These things are real: desert, rocks, shelter, legend (Judith Fryer). Coyote's Canyon evokes the beauty and mystery of southern Utah's desert canyons--home to Navajo and to the Anasazi who came before, and spiritual homeland to the Coyote Clan, thousands of individuals who draw nourishment from this land. This collaboration between photographer John Telford and writer Terry Tempest Williams is an intimate meditation on one of the earth's most extraordinary landscapes. Telford's spectacular color photographs of the region's canyons, mesas, hidden waterways, arches, Anasazi cliff dwellings, and desert vistas are rich with the reflected light that elevates rock into sculpture. Tempest Williams' stories celebrate the legend and ritual surrounding this sacred place, creating a compelling new mythology for desert lovers--persons quietly subversive in the name of the land. Taken together, these photographs and words are an invitation, an initiation into the desert's sanctuary of secrets--Coyote's Canyon. photographs throughout

River and Desert Plants of the Grand Canyon Kristin Huisinga,Lori Makarick,Kate Watters,2006 The Grand Canyon's isolation, great elevational range, and position at the convergence of three North American deserts--the Mojave, Sonoran, and Great Basin--have created unique habitats for an unusual assemblage of plants. Some grow only at seeps and springs, others emerge from cracks in the bedrock, and some live only in the Grand Canyon--for example, Roaring Springs prickly poppy and Grand Canyon flaveria. *River and Desert Plants of the Grand Canyon*, the first comprehensive field guide devoted to plants that live below the canyon rims, is bursting with beautiful color photographs and detailed line drawings of more than 250 ferns, grasses, forbs, shrubs, and trees. Narratives organized by life form and common family name describe each plant and its natural history, and thumbnail photographs arranged by flower color and shape offer a key for easy identification. Essays by contributing experts explore such topics as Grand Canyon ecology, desert-plant adaptations, biological soil crusts, plant pollination, invasive species, and domesticated plants of the canyon's indigenous people.

Along the Rim - a Guide to Grand Canyon's South Rim from Hermits Rest to Desert View Michael F. Anderson,2014-04

Arizona Kathleen Bryant,2011 As the Grand Canyon State celebrates its centennial in 2012, the spectacular photographs in this book celebrate its human and natural history. Photographs and informative text take the reader on a tour through the Grand Canyon, Sedona's red rocks, high mountains, Indian country, and deserts.--Amazon.com.

Desertlands of America J. A. Kraulis,1988 Kraulis studies the remarkable diversity of the American deserts: the Sonoran, the Mojave, the Chihuahuan and the Great Basin deserts, including many national parks and monuments noted for their exceptional landscapes. His photographs celebrate at once the desert's purity of form and its bewildering richness of shapes and light and color. His focus ranges from the rim of the Grand Canyon or an aerial view of the monoliths at Monument Valley to details of exquisite murals etched by water into sandstone walls. He is fascinated too by the biology of the desert, especially by the exotic plants that flourish here, the stately cactuses of Arizona or the bristlecone pines of California and Nevada, the oldest living things on earth. This is an evocative portrait of the marvelous and secret places of the desert's unspoiled wilderness.

Desert and Canyons~ Fine Art and Poetry Laurel Marie Sobol,2012-07-18 Desert country and canyons are a beautiful component of earth with fresh vibrant earth tones and vitality. These places are the natural jewels of earth and after spring rains the colors come out and sweep the earth in radiant glory!

Along the Rim Michael F. Anderson,2001 From Hermits Rest to Desert View, a road distance of some thirty-five miles, the heart of Grand Canyon National Park's South Rim skirts the edge of the world's most magnificent canyon. Along the Rim is the essential viewpoint-by-viewpoint guide to the South Rim, with seams of history, geology, and natural history winding through the text. Spectacular photographs showcase the scenic grandeur and the historic structures unique to the national park. This all-new edition of the classic book includes the latest information, new viewpoints and road routes, new photographs, and much more.--Amazon.com.

Desert Quartet Terry Tempest Williams,1995 Beautifully illuminated with drawings and paintings by noted artist Mary Frank, Williams, one of the West's most intense and lyrical writers, invokes the lure and drama of the landscape. This is an incandescent meditation--in word and image--on the physical vastness and beauty of the desert and the spiritual place one woman finds for herself there.

Bryce Canyon National Park Greer K. Chesher,2004

Almost Human Lee Berger,John Hawks,2017-05-09 This first-person narrative about an archaeological discovery is rewriting the story of human evolution. A story of defiance and determination by a controversial scientist, this is Lee Berger's own take on finding Homo naledi, an all-new species on the human family tree and one of the greatest discoveries of the 21st century. In 2013, Berger, a National Geographic Explorer-in-Residence, caught wind of a cache of bones in a hard-to-reach underground cave in South Africa. He put out a call around the world for petite collaborators—men and women small and adventurous enough to be able to squeeze through 8-inch tunnels to reach a sunless cave 40 feet underground. With this team of underground astronauts, Berger made the discovery of a lifetime: hundreds of prehistoric bones, including entire skeletons of at least 15 individuals, all perhaps two million years old. Their features combined those of known prehomnids like Lucy, the famousAustralopithecus, with those more human than anything ever before seen in prehistoric remains. Berger's team had discovered an all new species, and they called it Homo naledi. The cave quickly proved to be the richest prehomnid site ever discovered, full of implications that shake the very foundation of how we define what makes us human. Did this species come before, during, or after the emergence of Homo sapiens on our evolutionary tree? How did the cave come to contain nothing but the remains of these individuals? Did they bury their dead? If so, they must have had a level of self-knowledge, including an awareness of death. And yet those are the very characteristics used to define what makes us human. Did an equally advanced species inhabit Earth with us, or before us? Berger does not hesitate to address all these questions. Berger is a charming and controversial figure, and some colleagues question his interpretation of this and other finds. But in these pages, this charismatic and visionary paleontologist counters their arguments and tells his personal story: a rich and readable narrative about science, exploration, and what it means to be human.

Encounters with the Archdruid John McPhee,1977-10-01 The narratives in this book are of journeys made in three wildernesses - on a coastal island, in a Western mountain range, and on the Colorado River in the Grand Canyon. The four men portrayed here have different relationships to their environment, and they encounter each other on mountain trails, in forests and rapids, sometimes with reserve, sometimes with friendliness, sometimes fighting hard across a philosophical divide.
