**Assessment of Explosive Destruction Technologies for Specific Munitions at the Blue Grass and Pueblo Chemical Agent Destruction Pilot Plants** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee to Review Assembled Chemical Weapons Alternatives Program Detonation Technologies, 2009-05-22 The Army's ability to meet public and congressional demands to destroy expeditiously all of the U.S. declared chemical weapons would be enhanced by the selection and acquisition of appropriate explosive destruction technologies (EDTs) to augment the main technologies to be used to destroy the chemical weapons currently at the Blue Grass Army Depot (BGAD) in Kentucky and the Pueblo Chemical Depot (PCD) in Colorado. The Army is considering four EDTs for the destruction of chemical weapons: three from private sector vendors, and a fourth, Army-developed explosive destruction system (EDS). This book updates earlier evaluations of these technologies, as well as any other viable detonation technologies, based on several considerations including process maturity, process efficacy, process throughput, process safety, public and regulatory acceptability, and secondary waste issues, among others. It also provides detailed information on each of the requirements at BGAD and PCD and rates each of the existing suitable EDTs plus the Army's EDS with respect to how well it satisfies these requirements.

**Destruction of Hazardous Chemicals in the Laboratory** George Lunn, Eric B. Sansone, 2023-03-14 Destruction of Hazardous Chemicals in the Laboratory Single volume reference providing procedural information for the destruction of a wide variety of hazardous chemicals Destruction of Hazardous Chemicals in the Laboratory is a practical reference that describes procedures for the destruction of a comprehensive list of hazardous chemicals and provides general methods for the destruction of hazardous chemicals in the laboratory without the need for exotic reagents and equipment. Unlike most other sources on this subject, detailed reaction parameters are provided to readers. These details will help the reader decide if a procedure will be appropriate. To further aid in reader comprehension, numerous tables throughout the book allow for ready comparison of procedures. Destruction of Hazardous Chemicals in the Laboratory also describes the critical aspects of various protocols (e.g., UV lamp type and rate of ozone flow). The updated fourth edition Includes an updated survey of the literature from 2012-2021 and features data mined from 1,500 papers. It also describes recent examples of methods that are generally applicable to organic compounds and greatly expands the section on methods for the destruction of pharmaceuticals in the laboratory. In this book, readers can expect to find detailed information on: Specific methods for the destruction of hazardous chemicals in the laboratory, such as aflatoxins, butyllithium, complex metal hydrides, ethidium bromide, MPTP, nitrosamines, and polycyclic aromatic hydrocarbons Methods for the destruction of pharmaceuticals in the laboratory, such as those using ozone, persulfate, and potassium permanganate as well as photolytic degradation procedures Procedures for drying organic solvents A discussion of the issues concerning nitrosamine formation during the destruction process, particularly when sodium hypochlorite is used A variety of indexes, including a general index, cross index of pharmaceuticals and destruction procedures, cross index of dyes and destruction procedures, and cross index of names for dyes and biological stains Destruction of Hazardous Chemicals in the Laboratory is of immense value to researchers in the laboratory by enabling them to quickly and efficiently get rid of residual amounts of hazardous chemicals when a series of experiments has ended. The procedures in the text can also be incorporated into laboratory protocols.

Destruction of Evidence Jamie S. Gorelick, Stephen Marzen, Lawrence Solum, 1995-12-31 A practice manual as well as an authoritative resource, Destruction of Evidence analyzes issues from the standpoints of civil litigation, criminal litigation, and the laws of professional responsibility. Destruction of Evidence also discusses in-depth such areas as: the spoliation inference the tort of spoliation discovery sanctions ethics, and routine destruction Also included is an expanded discussion of discovery sanctions, including procedural issues, choice-of-law considerations, the requirements for preserving sanctions issues for appellate review, burdens of proof, and appellate review. The supplement keeps you up to date on the continuing development of the controversial torts of both first- and third party spoliation of evidence: Massachusetts has declined to recognize a cause of action in tort for intentional or negligent spoliation of evidence The Supreme Court of Mississippi did not recognize an independent cause of action for the intentional spoliation of evidence against first or third party spoliators Nevada declined to recognize an independent tort spoliation of evidence when weighed against the "potentially endless litigation over a speculative loss, and by the cost to society of promoting onerous record and evidence retention policies" Constitutional implications in the realm of criminal law. Many states within the last year have been addressing the potential for due process violations when evidence is destroyed and are continuing to adopt and expand the rules dictated by Brady, Trombetta, and Youngblood. While each of these new jurisdictions refused to find due process violation, this trend recognizes the increased potential for constitutional violations when evidence is destroyed: Hawaii refused to find a constitutional violation where a police officer failed to save her completed police report, citing Brady The Supreme Court of Mississippi ruled that a defendant was not denied due process by spoliation of crime scene evidence, citing Trombetta Nevada, using a bad faith standard, ruled that an independent laboratory's failure to refrigerate a defendant's blood sample did not violate due process A New Jersey court did not find a due process violation where the police had lost a videotape of the administration of breath tests for a DUI charge Oklahoma ruled that a defendant's due process rights were not violated when the police destroyed latent crime scene fingerprints, citing Youngblood Using an exculpatory evidence standard, the Supreme Court of South Dakota ruled that the State's release of a rape victim's vehicle without notice to the defendant did not violate the defendant's due process rights.

**The Routledge Handbook of Heritage Destruction** José Antonio González Zarandona, Emma Cunliffe, Melathi Saldin, 2023-08-10 The Routledge Handbook of Heritage Destruction presents a comprehensive view on the destruction of cultural heritage and offers insights into this multifaceted, interdisciplinary phenomenon; the methods scholars have used to study it; and the results these various methods have produced. By juxtaposing theoretical and legal frameworks and conceptual contexts

alongside a wide distribution of geographical and temporal case studies, this book throws light upon the risks, and the realizations, of art and heritage destruction. Exploring the variety of forces that drive the destruction of heritage, the volume also contains contributions that consider what forms heritage destruction takes and in which contexts and circumstances it manifests. Contributors, including local scholars, also consider how these drivers and contexts change, and what effect this has on heritage destruction, and how we conceptualise it. Overall, the book establishes the importance of the need to study the destruction of art and cultural heritage within a wider framework that encompasses not only theory but also legal, military, social, and ontological issues. The Routledge Handbook of Heritage Destruction will contribute to the development of a more complete understanding and analysis of heritage destruction. The Handbook will be useful to academics, students, and professionals with interest in heritage, conservation and preservation, history and art history, archaeology, anthropology, philosophy, and law.

Creative Destruction Raul Luciano Katz, 2002 Schumpeter's framework of creative destruction applied to the rapidly changing telecommunications and related Internet industries. More than fifty years ago, Joseph Schumpeter stated that processes intrinsic to a capitalist society produce a creative destruction, whereby innovations destroy obsolete technologies, only to be assaulted in turn by newer and more efficient rivals. This book asks whether the current chaotic state of the telecommunications and related Internet industries is evidence of creative destruction, or simply a result of firms, governments, and others wasting valuable resources with limited benefits to society as a whole. In telecommunications, for example, wireless, IP, and cable-based technologies are all fighting for a share of the market currently dominated by older, circuit-switched, copper-terminated networks. This process is accompanied by mergers, acquisitions, bankruptcies, and investment and divestment in worldwide markets. The selections discuss the primary challenge facing firms, governments, and other players: how to exploit the opportunities created by such destructive dynamics. They highlight the importance of national regulations promoting competition and nonmonopolistic market structures, as well as the role of new technologies such as the Internet in driving down the price and speeding the diffusion of innovative products and services in telecommunications, media, electronic retailing, and other new economy industries.

*The Destruction of Sodom* Graham J Harris, 2015-11-26 In *The Destruction of Sodom*, the Biblical account of the destruction of Sodom and Gomorrah is examined under the spotlight of modern science against a cultural backdrop of history and archaeology. In this scientific reconstruction, the account of events described in the book of Genesis is verified and it is established that the destruction occurred at about 2350 BC as a result of an earthquake-induced landslide transporting Sodom to the depths of the Dead Sea. Strands of geography, geology, and engineering science are drawn together to provide comprehensive treatment of all relevant scientific aspects pertinent to a rational understanding of the mechanics of the disaster. The detailed scientific argument follows a discussion of the Genesis account and considerations of Canaanite culture and commerce, with specific attention to the trade in bitumen. On this point, Graham Harris provides evidence that the mainstay of Canaanite commerce was the exploitation of the bitumen resources of the Dead Sea, that the Sodomites were among the world's first chemical engineers, and from the resources of the region a large number of processed materials also would have been exported to Egypt. *The Destruction of Sodom* is an example of the application of science to a fuller understanding of one of the most intriguing events of the Old Testament, and will be of direct interest to scholars as well as to the wider public.

Management Practice and Creative Destruction Steven Segal, 2016-03-09 How do managers and leaders know what to do when they are caught off guard or taken by surprise? How do they create when they do not know what to do next? These are challenges of an organizational world of existential uncertainty; one where the future does not conform to but challenges our expectations and assumptions. Steven Segal demonstrates that creating in a world of existential uncertainty requires a new understanding of the relationship between management inquiry and the lived experience of organizing. Using existential philosophy he demonstrates how moods of concern serve as a framework to integrate management theory and practice, thereby providing a framework for managers, management educators, and consultants to share a common framework. In a globalized free market characterized by unexpected disruptions management inquiry is not a science conducted from an objective distance. The book advocates an existentially reflexive and participant observer perspective to management inquiry. By participating in managing, a felt sense of being a manager develops. Through existential observation new ways of organizing are made possible. It is inquiry from within rather than from an objective distance. Such inquiry opens new doors and opportunities. Existential hermeneutic phenomenology and the free market phenomenon of creative destruction are linked to each other. The former provides a framework to work through the breakdown in conventions of organizing that occur in creative destruction.

**Destruction and Its Impact on Ancient Societies at the End of the Bronze Age** Jesse Millek, 2023-02-15 This volume offers a groundbreaking reassessment of the destructions that allegedly occurred at sites across the eastern Mediterranean at the end of the Late Bronze Age, and challenges the numerous grand theories that have been put forward to account for them. The author demonstrates that earthquakes, warfare, and destruction all played a much smaller role in this period than the literature of the past several decades has claimed, and makes the case that the end of the Late Bronze Age was a far less dramatic and more protracted process than is generally believed.

Inhibition and Destruction of the Microbial Cell W Hugo, 2012-12-02 *Inhibition and Destruction of the Microbial Cell* focuses on the effects of various classes of toxic chemical agents on microbial cell. This book is organized into 14 chapters that cover the topics from two points of view: the agent and the target (the microbial cell). The introductory chapters are devoted to the inhibitory effects of elevating temperature and to the lethal effect of environmental thermal energy supply restriction on growing bacteria. A chapter focuses on the effect of various classes of antibacterial compounds, such as 4-amino-quinolindinium and 8-hydroxyquinoline derivatives, chlorhexidine, amidines, halogens, dyes, and nitrofurans. The subsequent chapters examine the effects of other chemical agents on microorganisms, including toxic gases, solutes, ions, and radiations. The book goes on examining the inhibition and destruction of specific microorganisms, such as *Pseudomonas aeruginosa*, *Enterobacteriaceae*, *Mycobacteria*, *Cocci*, bacterial spores, molds, yeasts, and viruses. The last chapter discusses the effect of the cultural prehistory of microorganisms upon their response to inhibition and destruction. This book is an invaluable resource for graduate research workers and scientists in pure and applied microbiology. This will also be a good reference for undergraduates readings specialized courses at honors level in microbiology or applied courses in

food science and agriculture. Furthermore, it will be of interest to the medical profession, especially those involved in public health and pathology, as well as to scientists in the pharmaceutical industry.
