Molecular and Cellular Effects of Nutrition on Disease Processes Grant N. Pierce, Heinz Rupp, Tohru Izumi, Alain Grynberg, 2013-04-17 This volume contains the proceedings of the 2nd World Conference of the International Society for Molecular Nutrition & Therapy. This conference was held on August 2-4, 1997, in Winnipeg, Canada. The goal of the conference was to advance our knowledge concerning the molecular events which link nutrition to various disease processes in the body. This volume represents an important compilation of unique articles addressing the molecular and cellular basis for the nutritional and therapeutic treatment of five general disease processes.

MacSween's Pathology of the Liver E-Book Alastair D. Burt, Linda D. Ferrell, Stefan G. Hübscher, 2017-05-22 Since its first publication more than 35 years ago, MacSween's Pathology of the Liver, by Drs. Alastair D. Burt, Linda D. Ferrell, and Stefan G. Hübscher, has established itself as the definitive reference on liver pathology. The 7th Edition continues the tradition of excellence with more than 1,000 high-quality illustrations, coverage of the new and emerging diagnostic applications and techniques that pathologists must be familiar with, an up-to-date review of drug-induced injury, and much more. A must-have for every surgical pathologist, MacSween's remains the most authoritative and comprehensive book in its field. Provides comprehensive, state-of-the-art coverage of all malignant and benign hepatobiliary disorders from an international who's who in the field. Helps you quickly recognize the wide variety of liver appearances that result from infections, tumors, and tumor-like lesions, as well as organ damage caused by drugs and toxins. Features 1,000+ full-color illustrations that provide a complete visual guide to each tumor or tumor-like lesion and assist in the recognition and diagnosis of any tissue sample you're likely to encounter. Incorporates relevant data from ancillary techniques (immunohistochemistry, cytogenetics, and molecular genetics), giving you the tools required to master the latest breakthroughs in diagnostic technology. Includes an updated chapter on mechanisms of liver disease, including coverage of regression and remodeling of disease and new information on next generation sequencing; an up-to-date review of drug-induced injury, including the effects of herbal and alternative medicines.

Epigenetic Regulation of Lymphocyte Development Cornelis Murre, 2012-02-07 The studies described in this volume serve as a starting point to familiarize one self with the multifarious differences in epigenetic designs that orchestrate the progression of developing blood cells. They also may serve as a general paradigm for the mechanisms that underpin the control of eukaryotic gene expression.

Proof, Computation and Agency Johan van Benthem, Amitabha Gupta, Rohit Parikh, 2011-04-02 Proof, Computation and Agency: Logic at the Crossroads provides an overview of modern logic and its relationship with other disciplines. As a highlight, several articles pursue an inspiring paradigm called 'social software', which studies patterns of social interaction using techniques from logic and computer science. The book also demonstrates how logic can join forces with game theory and social choice theory. A second main line is the logic-language-cognition connection, where the articles collected here bring several fresh perspectives. Finally, the book takes up Indian logic and its connections with epistemology and the philosophy of science, showing how these topics run naturally into each other.

Long-Range Control of Gene Expression Veronica van Heyningen, Robert E. Hill, 2011-09-02 Long-Range Control of Gene Expression covers the current progress in understanding the mechanisms for genomic control of gene expression, which has grown considerably in the last few years as insight into genome organization and chromatin regulation has advanced. Discusses the evolution of cis-regulatory sequences in drosophila. Includes information on genomic imprinting and imprinting defects in humans. Includes a chapter on epigenetic gene regulation in cancer.

Fluorine in Organic Chemistry Richard D. Chambers, 2004 The introduction of carbon-fluorine bonds into organic compounds can profoundly influence their chemical and physical properties when compared to their non-fluorine-containing analogues, leading to a range of man-made materials with highly desirable properties. These molecules are of interest across the wide spectrum of industrial and academic organic chemistry, from pharmaceuticals, through fine and specialty chemicals to polymers. From Prozac to Teflon, many of the most important products of the chemical and life-science industries rely on organic fluorine chemistry for their useful properties. This book covers both the preparative methodologies and chemical properties of partially and highly fluorinated organic systems.

Random Number Generation and Quasi-Monte Carlo Methods Harald Niederreiter, 1992-01-01 Tremendous progress has taken place in the related areas of uniform pseudorandom number generation and quasi-Monte Carlo methods in the last five years. This volume contains recent important work in these two areas, and stresses the interplay between them. Some developments contained here have never before appeared in book form. Includes the discussion of the integrated treatment of pseudorandom numbers and quasi-Monte Carlo methods; the systematic development of the theory of lattice rules and the theory of nets and (t,s)-sequences; the construction of new and better low-discrepancy point sets and sequences; Nonlinear congruential methods; the initiation of a systematic study of methods for pseudorandom vector generation; and shift-register pseudorandom numbers. Based on a series of 10 lectures presented by the author at a CBMS-NSF Regional Conference at the University of Alaska at Fairbanks in 1990 to a selected group of researchers, this volume includes background material to make the information more accessible to nonspecialists.

Diseases of the Liver in Children Karen F. Murray, Simon Horslen, 2013-12-11 Diseases of the Liver in Children: Evaluation and Management provides a comprehensive, state-of-the-art review of pediatric liver disease, with a practical approach useful for the primary care provider or general gastroenterologist. With an emphasis on tables and images, this book serves as a reference for understanding basic hepatic processes and the significance of laboratory findings. It also discusses the state of the art of diagnosis and treatment of diseases that affect the pediatric liver. The text captures the key elements of treatment and monitoring important for the primary care provider partnering in the care of these patients with pediatric hepatologists. The current state of transplantation and other surgical approaches are also discussed. The importance of aggressive bowel rehabilitation in the prevention of end-stage total parenteral nutrition-induced liver disease is also covered. Written by experts in their fields and including the most up to date clinical information, Diseases of the Liver in Children: Evaluation and Management serves as a very useful resource for physicians.

Textbook of Neuromodulation Helena Knotkova, Dirk Rasche, 2014-11-15 Until recently, it was thought that the adult brain is modifiable only during early stages of ontogenesis. However, neurophysiological and neuroimaging studies now indicate that the mature human brain is, under certain conditions, capable of substantial neuroplastic changes. Neuroplasticity reflects the ability of the human brain to alter the pattern of neural activation in response to previous experience, and recent findings indicate that the effects of experience can lead to both structural as well as functional reorganization. It has been shown that pathological neuroplastic changes can be reverted/normalized and that the modulation of the neuroplastic changes can be paralleled by improvement of the patient's status. However, there is a gap between the potential of neuromodulation, technical progress and actual preparedness of medical personnel to provide this type of treatment. A prevalent

opinion among medical professionals indicates that training programs and educational materials in neuromodulatory techniques are well needed and appreciated. Neuromodulation will focus on the description and discussion of methods currently available for invasive and non-invasive neuromodulation, their clinical potential, significance and practical applications. In order to facilitate understanding of the topic, the initial part of the textbook will review neurophysiological systems involved in neuromodulation and will provide readers with basic principles of neuroplasticity that constitutes the rationale for neuromodulation in human medicine. Additionally, the clinical use of these techniques will be described with special regard to safety and avoidance of complications.

Cognitive Electrophysiology H.-J. Heinze,T.F. Münte,George R. Mangun,1994-01-26 MICHAEL S. GAZZANIGA The investigation of the human brain and mind involves a myriad of approaches. Cognitive neuroscience has grown out of the appreciation that these approaches have common goals that are separate from other goals in the neural sciences. By identifying cognition as the construct of interest, cognitive neuroscience limits the scope of investigation to higher mental functions, while simultaneously tackling the greatest complexity of creation, the human mind. The chapters of this collection have their common thread in cognitive neuroscience. They attack the major cognitive processes using functional studies in humans. Indeed, functional measures of human sensation, perception, and cognition are the keystone of much of the neuroscience of cognitive science, and event-related potentials (ERPs) represent a methodological coming of age in the study of the intricate temporal characteristics of cognition. Moreover, as the field of cognitive ERPs has matured, the very nature of physiology has undergone a significant revolution. It is no longer sufficient to describe the physiology of non-human primates; one must consider also the detailed knowledge of human brain function and cognition that is now available from functional studies in humans- including the electrophysiological studies in humans described here. Together with functional imaging of the human brain via positron emission tomography (PET) and functional magnetic resonance imaging (fMRI), ERPs fill our quiver with the arrows required to pierce more than the single neuron, but the networks of cognition.

Structural Shielding Design for Medical X-ray Imaging Facilities National Council on Radiation Protection and Measurements,2004 Report No. 147 (2004) presents recommendations and technical information related to the design and installation of structural shielding for facilities that use x rays for medical imaging. The purpose of structural shielding is to limit radiation exposure to employees and members of the public. The information supersedes the recommendations that address such facilities in NCRP Report No. 49, Structural Shielding Design and Evaluation for Medical Use of X Rays and Gamma Rays of Energies Up to 10 MeV, which was issued in September 1976. NCRP Report No. 147 includes a discussion of the various factors to be considered in the selection of appropriate shielding materials and in the calculation of barrier thicknesses. The Report presents the fundamentals of radiation shielding, discusses shielding design goals for controlled and uncontrolled areas in or near x-ray imaging facilities and defines the relationship of these goals to the NCRP effective dose limits for radiation workers and members of the public. The Report includes a detailed discussion of the recommended shielding design methodology for x-ray imaging facilities and provides an extensive collection of shielding data and sample shielding calculations for various types of x-ray imaging facilities. The Report is mainly intended for those individuals who specialize in radiation protection. However, it will also be of interest to architects, hospital administrators and related professionals concerned with the planning of new facilities that use x rays for medical imaging.
