Component- Oriented Development and Assembly Piram Manickam,S. Sangeetha,S. V.

Subrahmanya,2013-12-04 Although industry has been leveraging the advancements of component-oriented development and assembly (CODA) technology for some time, there has long been a need for a book that provides a complete overview of the multiple technologies that support CODA. Filling this need, Component-Oriented Development and Assembly supplies comprehensive coverage of the principles, practice, and paradigm of component-oriented development and assembly. The first part of the book provides the conceptual foundation for component-oriented software. Part II focuses on the various standard Java component models and describes how to develop a component-oriented system using these component models. Part III covers the various aspects of the component-oriented development paradigm. Based on the authors' research and teaching experience, the text focuses on the principles of component-oriented software development from a technical concepts perspective, designer's perspective, programmer's perspective, and manager's perspective. Covering popular component development frameworks based on Java, it is suitable as a textbook for component-oriented software for undergraduate and postgraduate courses. It is also an ideal reference for anyone looking to adopt the component-oriented development paradigm. The book provides readers with access to all the source code used in the book on a companion site (<http://www.codabook.com>). The source code for the CODA implementation of the case study presented in Chapter 11 is also hosted on the website. The website will also serve as a technical forum for further discussions on the topic and for any updates to the book.

Handbook of Library Training Practice and Development Mr Alan Brine,2012-10-01

Librarians must now work at a different level from that required 20 years ago, but the training available is not always appropriate or accessible to all. The authors of this volume have responded to this significant and continuing change within the profession by offering a much-needed guide to best practice for staff training and development in library and information work. This handbook addresses new aspects of service provision both in the UK and abroad, and provides an up-to-date review of the current developments that are becoming increasingly important to librarians through the influence of the electronic age and the widening of areas of professional involvement. The Handbook of Library

Training Practice and Development will be invaluable to those responsible for the development of staff and line managers as well as providing a crucial insight into the information profession for anyone new to this career path or looking to develop their knowledge within it.

Internet Reference Support for Distance Learners Rita Pellen, William Miller, 2013-12-19 Make separate library services for distance learners a thing of the past Internet Reference Support for Distance Learners takes a comprehensive look at efforts by librarians and information specialists to provide distance learners with effective services that match those already available on campus. With the development of the World Wide Web and the evolution of Web-based services, reference librarians are adding a human element to the virtual library, blurring the difference between distance learners and traditional users. This unique book examines how they deal with a wide range of related topics, including standards and guidelines, copyright issues, streaming media, and chat and digital

references, and presents a historical overview of how reference and instructional services have been delivered to distance users—before and after the creation of the Internet. Internet Reference Support for Distance Learners reveals that librarians do not make a sharp distinction between reference and instruction within the context of distance learning, and that there is no clear boundary between “true” distance learners and more traditional students who might use services designed for nontraditional users. Online capabilities have allowed reference librarians to approximate services advocated by published guidelines and standards, including the ACRL Distance Learning Section’s Guidelines for Distance Learning Library Services, to provide a framework for librarians to plan services for off-campus students. Internet Reference Support for Distance Learners provides practical information on: how librarians can “keep IT simple” when designing methods to access reference support why library Web sites are vital sources of communication between the distance learning student and the reference-based instructional component how to set up a university chat service, including software selection, staff training and assessment how to provide students services beyond traditional provision of resources, including advising, enrollment, and payment of fees how to create an online assistance site that incorporates online versions of traditional print handouts, FAQs, subject guides, course-specific guides, learning modules, and instructional videos in one central location how to work with faculty to create online support for students in Blackboard courses the pros and cons of using open-source software how to create an online library assistance site how to create online information literacy course to teach independent research skills to remote students how to avoid copyright infringement and how to educate library personnel about copyright law how to use Camtasia Studio, a screen capture program to create audio and video for online presentations Internet Reference Support for Distance Learners is an invaluable resource for librarians working in academic, school, special, and

public settings, and for library science faculty and students.

The Collection's at the Core Marcia A. Mardis, 2014-12-04 Common Core standards, OER, STEM, and collection development—where to begin? This book investigates these critical topics together to give you the power to transform your collection and practice and put your school library at the center of STEM. Curricula that focus on Science, Technology, Engineering, and Mathematics (STEM) areas of study aren't just important for furthering competency and careers in these fields; STEM helps ensure that future generations include inventive and critical thinkers. Digital resources offer a current, exciting direction to involve school librarians with their STEM teachers. With its specific focus on open digital multimedia learning resources, this book will enable school librarians to take advantage of this opportunity and evaluate, build, and maintain their STEM collections. The book comprises three sections: an overview of policy initiatives; a thorough exploration of STEM education policy, digital materials, and collection considerations; and detailed explanations of strategies for collection development and promotion. You'll learn how to perform a collection analysis to determine the age and extent of your STEM collections and make priorities for enriching them with appropriate digital multimedia resources as well as how to classify resources using Dewey and Sears and with regard to the Common Core State Standards and the Next Generation Science Standards.

Component-based Software Development Kung-Kiu Lau, 2004 Component-based software development (CBD) is an emerging discipline that promises to take software engineering into a new era. Building on the achievements of object-oriented software construction, CBD aims to deliver software engineering from a cottage industry into an industrial age for Information Technology, wherein software can be assembled from components, in the manner that hardware systems are currently constructed from kits of parts. This volume provides a survey of the current state of CBD, as

reflected by activities that have been taking place recently under the banner of CBD, with a view to giving pointers to future trends. The contributions report case studies - self-contained, fixed-term investigations with a finite set of clearly defined objectives and measurable outcomes - on a sample of the myriad aspects of CBD. The book includes chapters dealing with COTS (commercial off-the-shelf) components; methodologies for CBD; compositionality, i.e. how to calculate or predict properties of a composite from those of its constituents; component software testing; and grid computing.
