Rogers, 1962 Literature survey of the sociological aspects of mass media of innovations - covers research, cultural factors and traditional norms, the adoption process (decision making and discontinuance), innovators, computer simulation, opinion leadership, personal influence, prediction, social implications, etc. Bibliography pp. 317 to 358.

Diffusion of Innovations, 4th Edition Everett M. Rogers, 2010-07-06 Since the first edition of this landmark book was published in 1962, Everett Rogers's name has become virtually synonymous with the study of diffusion of innovations, according to Choice. The second and third editions of Diffusion of Innovations became the standard textbook and reference on diffusion studies. Now, in the fourth edition, Rogers presents the culmination of more than thirty years of research that will set a new standard for analysis and inquiry. The fourth edition is (1) a revision of the theoretical framework and the research evidence supporting this model of diffusion, and (2) a new intellectual venture, in that new concepts and new theoretical viewpoints are introduced. This edition differs from its predecessors in that it takes a much more critical stance in its review and synthesis of 5,000 diffusion publications. During the past thirty years or so, diffusion research has grown to be widely recognized, applied and admired, but it has also been subjected to both constructive and destructive criticism. This criticism is due in large part to the stereotyped and limited ways in which many diffusion scholars have defined the scope and method of their field of study. Rogers analyzes the limitations of previous diffusion studies, showing, for example, that the convergence model, by which participants create and share information to reach a mutual understanding, more accurately describes diffusion in most cases than the linear model. Rogers provides an entirely new set of case examples, from the Balinese Water Temple to Nintendo videogames, that beautifully illustrate his expansive research, as well as a completely revised bibliography covering all relevant diffusion scholarship in the past decade. Most important, he discusses recent research and current topics, including social marketing, forecasting the rate of adoption, technology transfer, and more. This all-inclusive work will be essential reading for scholars and students in the fields of communications, marketing, geography, economic development, political science, sociology, and other related fields for generations to come.

Diffusion of Innovations, 5th Edition Everett M. Rogers, 2003-08-16 Now in its fifth edition, Diffusion of Innovations is a classic work on the spread of new ideas. In this renowned book, Everett M. Rogers, professor and chair of the Department of Communication & Journalism at the University of New Mexico, explains how new ideas spread via communication channels over time. Such innovations are initially perceived as uncertain and even risky. To overcome this uncertainty, most people seek out others like themselves who have already adopted the new idea. Thus the diffusion process consists of a few individuals who first adopt an innovation, then spread the word among their circle of acquaintances—a process which typically takes months or years. But there are exceptions: use of the Internet in the 1990s, for example, may have spread more rapidly than any other innovation in the history of humankind. Furthermore, the Internet is changing the very nature of diffusion by decreasing the importance of physical distance between people. The fifth edition addresses the spread of the Internet, and how it has transformed the way human beings communicate and adopt new ideas.

Marcolin, 2013-04-17 Diffusing Software Product and Process Innovations addresses the problems and issues surrounding successful diffusion of innovations in software. IT Innovation for Adaptability and Competitiveness Brian Fitzgerald, Eleanor Wynn, 2006-04-11 IT Innovation for Adaptability and Competitiveness addresses the topic of IT innovations that can further an organization's ability to adapt and be competitive. Topics covered in the book include: -The role of IT in organizational innovation, -Innovating systems development & process, -Assessing innovation drivers, -Innovation adoption, -New environments, new innovation practices. This volume contains the edited proceedings of the Seventh Working Conference on IT Innovation for Adaptability and Competitiveness, which was sponsored by the International Federation for Information Processing (IFIP) Working Group 8.6 and held at Intel Corporation, Leixlip, Ireland in May-June 2004.

Science, Technology Policy and the Diffusion of Knowledge Tim Turpin, V. V. Krishna, 2007-01-01 The Asia Pacific has emerged as one of the most dynamic regions in the world, presenting a variety of social and economic experiences and responses to global pressures. In this book twelve country case studies explore the ways in which national science, technology and innovation policies are evolving in response to globalization. The editors argue that the national innovation system (NIS) perspective is driving policy regimes toward new approaches in policy intervention. Underlying the new policy agenda is a concern with reframing the role for science, technology and innovation institutions including higher education and integrating local community, national and global technology objectives. Presenting a broad analysis, the book will be of great interest to policy analysts and practitioners concerned with science, technology and innovation policy. It will also appeal to academic and postgraduate students concerned with innovation and industrial development, as well as scholars and practitioners engaged in regional development and international business in the Asia Pacific region.

Democratizing Innovation Eric Von Hippel, 2006-02-17 The process of user-centered innovation: how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy. Innovation is rapidly becoming democratized. Users, aided by improvements in computer and communications technology, increasingly can develop their own new products and services. These innovating users—both individuals and firms—often freely share their innovations with others, creating user-innovation communities and a rich intellectual commons. In Democratizing Innovation, Eric von Hippel looks closely at this

emerging system of user-centered innovation. He explains why and when users find it profitable to develop new products and services for themselves, and why it often pays users to reveal their innovations freely for the use of all. The trend toward democratized innovation can be seen in software and information products—most notably in the free and open-source software movement—but also in physical products. Von Hippel's many examples of user innovation in action range from surgical equipment to surfboards to software security features. He shows that product and service development is concentrated among lead users, who are ahead on marketplace trends and whose innovations are often commercially attractive. Von Hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users. He points to businesses—the custom semiconductor industry is one example—that have learned to assist user-innovators by providing them with toolkits for developing new products. User innovation has a positive impact on social welfare, and von Hippel proposes that government policies, including R&D subsidies and tax credits, should be realigned to eliminate biases against it. The goal of a democratized user-centered innovation system, says von Hippel, is well worth striving for. An electronic version of this book is available under a Creative Commons license.

Transformational Innovation in the Creative and Cultural Industries Alison Rieple, Robert DeFillippi, David Schreiber, 2023-06-13 Interest in the management of creative and cultural organisations has grown at pace with the size of this sector. This textbook uniquely focuses on how innovation in these industries transforms practice. Uncovering the strategic role of innovation for organizations in the creative and cultural sector, the book provides readers with practical guidance to help traverse seismic disruptions brought about by global health and economic crises. The authors examine how innovation in business models, products, services, and technology has disrupted the competitive landscapes of the arts world. Innovations are characterized as deriving from other industries as well as via exogenous shocks that privilege some companies over others. Case studies bring to life how innovation is used strategically in different ways around varying competitive forces. Enhanced by conceptual tools and replete with industry examples, this textbook is an ideal resource for students and reflective practitioners to understand how innovation can be a productive tool for transforming their own creative and cultural industry practice and performance during a period of rapid technological change and unprecedented societal challenge.

The Chocolate Model of Change Diane Dormant, Joe Lee, 2011-07-03 A how-to-guide to get others in your organization to accept new technologies, processes, regulations, management, etc.

Facilitating Technology Transfer through Partnership Tom McMaster, E. Mumford, E.B. Swanson, B. Warboys, David Wastell, 2016-01-09 The primary aim for this book is to gather and collate articles which represent the best and latest thinking in the domain of technology transfer, from research, academia and practice around the world. We envisage that the book will, as a result of this, represent an important source of knowledge in this domain to students (undergraduate and postgraduate), researchers, practitioners and consultants, chiefly in the software engineering and IT/industries, but also in management and other organisational and social disciplines. An important aspect of the book is the role that reflective practitioners (and not just academics) play. They will be involved in the production, and evaluation of contributions, as well as in the design and delivery of conference events, upon which of course, the book will be based.
