*The Digital Document* Bruce Duyshart, 2013-02-01 Documents, such as drawings, memos and specifications, form an essential function in the design and construction industry. Throughout the lifecycle of a built asset, starting from an initial design idea, right

through to a final built form and its ongoing management, thousands, even millions of documents can be used to convey various forms of information to a range of interested parties. In many ways, therefore, the success of a design, or construction-based company, relies upon an understanding of the use of documents, as well as the technologies and techniques that are used to create them. The Digital Document provides an extensive background to the issues and technologies surrounding this very important topic. It examines a technical subject in an insightful manner that is neither intimidating nor confusing, even to the novice computer user. By introducing the subject through a series of preliminary reviews of current practices and essential computing technologies, the reader is able to better appreciate the benefits and capabilities of a wide range of digital document types. This book explores the role of documents in a professional practice, examines the components, capabilities, viability, and use of digital documents in the design and construction industry, and identifies and explains many of the standards in use today. In order to facilitate a better understanding of digital document technologies, a number of essential reviews are provided including: - the definition and purpose of a document - how documents are typically used by design professionals - the nature of the digital document environment - the data types which make up digital documents The Digital Document is an essential reference for the architect, engineer or design professional that wants to find out more about effective communication in the digital workplace. Bruce Duyshart is an IT Project Manager with Lend Lease Corporation and specialises in the development and implementation of digital media and information management technologies on design and construction projects. He holds a Masters degree in Architecture and is also an academic associate of the Faculty of Architecture, Building and Planning at the University of Melbourne. He has written numerous papers on emerging technologies in the architecture, engineering and construction industry, and has developed Internet web sites for the Royal Australian Institute of Architects and Architecture Media.

*Document Management for Hypermedia Design* Piet A.M. Kommers, Alcindo F. Ferreira, Alex W. Kwak, 2012-12-06 Migrating from paper-based to electronic documentation is a task that needs careful planning. Electronic texts offer new ways to store, retrieve, update, and cross-link information. Hypermedia documents, in which texts are cross-linked via keywords and in which audio and video files may also be integrated, require new levels of organization and strict discipline from authors, editors, and managers. As documents become living their document managers must control access, privileges, interconnections, segmentation, and flexibility for different readers. This book introduces and surveys these new developments. Based on a wealth of experience in large hypermedia projects, it provides a step-by-step guide to all aspects of hypermedia development, from strategic decision-making to editing formats and production methods.
