Simulating Spacecraft Systems Jens Eickhoff, 2009-09-25 Satellite development worldwide has significantly changed within the last decade and has been accelerated and optimized by modern simulation tools. The classic method of developing and testing several models of a satellite and its subsystems with the aim to build a pre-flight and finally a flight model is being replaced more and more by a considerably faster and more inexpensive method. The new approach no longer includes functional test models on entire spacecraft level but a system simulation. Thus overall project runtimes can be shortened. But also significantly more complex systems can be managed and success oriented tests on integration and software level can be realized before the launch. Applying modern simulation infrastructures already during spacecraft development phase, enables the consistent functionality checking of all systems both in detail and concerning their interaction. Furthermore, they enable checks of the system's proper functionality, their reliability and safety / redundancy. But also analysis regarding aging and lifetime issues can be performed by simulation. Project-related simulations of operational scenarios, for example with remote sensing satellites, and the checking of different operational modes are of similar importance. On the whole, risk is reduced significantly and the satellite can be produced in a considerably more cost efficient way, with higher quality and in shorter periods of time. Therefore *Simulating Spacecraft Systems* - the title of the present book - is an important domain of modern system engineering, which meanwhile has successfully established a position in many other sectors of industry and research, too.

Pharmaceutical Biocatalysis Peter Grunwald, 2019-06-27 This book provides an overview of the world market of therapeutic enzymes and enzyme inhibitors, rare diseases, orphan drugs, the costs of drug development and therapies, and enzymes in downstream processing of pharmaceuticals. It discusses carbonic anhydrase inhibitors and their multiple drug interactions, carboxylesterase inhibitors for pharmaceutical applications, employment of inhibitors for the treatment of neurodegenerative diseases, use of engineered proteins, bioactive peptides, and fibrinolytic enzymes for thrombolytic therapy, and enzymes important for the design and development of new drugs/drug metabolites such as aldehyde oxidases and cytochrome P450 enzymes and the role the latter play in vascular biology and pathophysiology. The treatment of cancer is explored in connection with enzymatic amino acid deprivation therapies and new drugs that act as chemical degraders of oncogenic proteins. The book also introduces the resistance mechanisms of cancer. Furthermore, it provides an insight into the relationship between pathological conditions of cardiovascular disease and oxidative stress. The text also focuses on the potential use of nanoparticles as carriers for enzymes with medical relevance, computer-aided drug design for the identification of multi-target directed ligands, and the development of improved therapeutics through a glycan-“designer” approach. It concludes with an introduction to the chemoenzymatic synthesis of drugs.

The Maritime Blockade of Germany in the Great War John D. Grainger, 2020-11-26 The Tenth Cruiser Squadron of the Grand Fleet had the task of patrolling the seas between Scotland and Greenland to intercept enemy ships trying to escape into the ocean and merchant ships who could be carrying goods destined for Germany. This was a task of great political sensitivity, since almost all the ships intercepted were neutrals, and requiring great physical endurance from ships and men in the violent North Atlantic. The Maritime Blockade of Germany in the Great War is a comprehensive collection of the records of the Northern Patrol. It consists of regular reports of the admirals in command, to which are added other relevant official records, and more informal documents. There are the chatty letters of Captain Vivian and HMS Patia, the appalling experiences of young officers placed in barely seaworthy sailing ships to see that they went into port for examination, the pathetic 'mutiny' by a bored, distressed and underpaid black gang, the diary of Able Seaman Style, demonstrating the tedium of the patrol, and the self-satisfied diary of Dr Shaw. There are also the casualties: ships overwhelmed by storms, sunk by enemy action, torpedoed. The ships of the Patrol were perhaps the most constantly active Royal Navy vessels in the Great War, a barely acknowledged yet vital component in the eventual Allied victory
