Preventing Disease Richard B. Goldbloom, Robert S. Lawrence, 2012-12-06 Preventing Disease, the offspring of an extraordinary collaboration between the U.S. and Canadian Preventive Services Task Forces, presents a meticulous and objective review of the published evidence on preventive measures. Examining such diverse and relevant topics as screening for endometrial cancer, exercise counselling for healthy adults, and the evidence for a causal relation between dietary lipids and coronary heart disease, this volume reflects the editors' shared conviction that recommendations for preventive action should rarely exceed what is well justified by the evidence. In the current period, characterized as the Second Public Health Revolution, the authors' hard-nosed approach leads them to ask the tough questions. Are preventive measures cost-saving? Does preventive screening actually lead to treatment in clinical practice? Does the treatment do more good than harm? To what extent does our desire to eliminate causes of serious disability, ill health and premature death cloud our objectivity? All concerned about preventive medicine, community health, and primary care will find valuable stimulation for thought and action in this book: the contributions have gone beyond the rhetoric.

Proteinuria: Basic Mechanisms, Pathophysiology and Clinical Relevance Judith

Blaine, 2016-10-19 Recent work has begun to elucidate at the molecular level how albumin is handled by the kidney and how albuminuria develops in various proteinuric diseases including minimal change disease and focal segmental glomerulosclerosis. This volume provides a comprehensive overview of the renal handling of albumin – from basic mechanisms to the pathophysiology of proteinuric diseases. In describing the basic mechanisms of albuminuria, a particular highlight will be the focus on advanced imaging techniques such as intravital microscopy that have allowed a detailed “window” into albumin transit through the kidney. The volume will cover the epidemiological studies which show that albuminuria is a strong and independent marker of kidney disease progression and cardiovascular events, the molecular details of albumin handling in the kidney at the level of the glomerulus and the proximal tubule and the pathophysiology of proteinuric diseases including minimal change disease, membranous nephropathy, focal segmental glomerulosclerosis and diabetic nephropathy.

Nephrology Menna Clatworthy, 2010-03-08 Nephrology is an important speciality; patients with acute or chronic kidney failure are encountered in every medical and surgical speciality, as well as in general practice. On most general medical rotations and on most surgical wards there are patients with renal problems. Renal medicine is taught on rotation during degree courses, and Foundation training programmes frequently include attachments in nephrology, urology, and renal transplantation. *Nephrology: Clinical Cases Uncovered* contains clinical presentations with real-life patient cases and outcomes as seen on the wards and in exams, and leads students through a practical approach to diagnosis and management of kidney disease. Following a question-answer approach, including self-assessment material and a ‘refresher’ section on the basic science of this clinical area, *Nephrology: Clinical Cases Uncovered* features investigations and the treatment options available for patients with renal disease, including those requiring renal replacement therapy with dialysis and transplantation. Difficult concepts are clarified, using simple diagrams to explain the link between pathology and clinical presentation. *Nephrology: Clinical Cases Uncovered* is ideal for medical students, junior doctors on the Foundation Programme, GP trainees, and specialist nurses and nurse practitioners. This book is also a useful refresher for nephrology trainees at the beginning of their specialist training programme.
