Object to Be Destroyed Pamela M. Lee, 2001-08-24 In this first critical account of Matta-Clark's work, Pamela M. Lee considers it in the context of the art of the 1970s—particularly site-specific, conceptual, and minimalist practices—and its confrontation with issues of community, property, the alienation of urban space, the right to the city, and the ideologies of progress that have defined modern building programs. Although highly regarded during his short life—and honored by artists and architects today—the American artist Gordon Matta-Clark (1943-78) has been largely ignored within the history of art. Matta-Clark is best remembered for site-specific projects known as building cuts. Sculptural transformations of architecture produced through direct cuts into buildings scheduled for demolition, these works now exist only as sculptural fragments, photographs, and film and video documentations. Matta-Clark is also remembered as a catalytic force in the creation of SoHo in the early 1970s. Through loft activities, site projects at the exhibition space 112 Greene Street, and his work at the restaurant Food, he participated in the production of a new social and artistic space. Have art historians written so little about Matta-Clark's work because of its ephemerality, or, as Pamela M. Lee argues, because of its historiographic, political, and social dimensions? What did the activity of carving up a building—in anticipation of its destruction—suggest about the conditions of art making, architecture, and urbanism in the 1970s? What was one to make of the paradox attendant on its making—that the production of the object was contingent upon its ruination? How do these projects address the very writing of history, a history that imagines itself building toward an ideal work in the service of progress? In this first critical account of Matta-Clark's work, Lee considers it in the context of the art of the 1970s—particularly site-specific, conceptual, and minimalist practices—and its confrontation with issues of community, property, the alienation of urban space, the right to the city, and the ideologies of progress that have defined modern building programs.

Server Disk Management in a Windows Environment Drew Robb, 2003-09-26 Hard drives and disk management receive scant attention from the industry press, yet recent surveys have identified disk failure as the #1 source of server downtime. Combine this fact with the skyrocketing TCO of data storage management, and it is apparent that server disk management is a subject deserving of much more scrutiny. *Server Disk Management in a Windows Environment* explains the basic elements of disks and disk architectures, and explores how to successfully manage and maintain functionality within a Windows environment. The author focuses on critical

issues that are often ignored by other books on this subject, issues including disk quotas, fragmentation, optimization, hard drive reliability, asset management, software deployment, and system forensics. This book is a valuable resource for IT veterans and those who are less tech-savvy. Students and IT newcomers can access multiple definitions and examples of fundamentals such as disk organization, file systems, and basic maintenance actions. Chapters examining hardware and software management and industry trends provide further insight into how you can maintain and monitor disks, and have them perform at maximum efficiency.

Spoil Island Charlie Hailey, 2013-08-01 Spoil islands are overlooked places combining dirt with paradise, waste-land with “brave new world,” and wildness with human intervention. Mundane products of dredging, these islands form an uninvestigated archipelago that demonstrates the potential value and contested re-valuation of landscapes of waste. Research navigates the U.S. east coast from New York City to Key West, examines these marginalized topographies to understand emergent concerns of 21st-century placemaking, public space, and infrastructure, and discovers that spoil islands constitute an unprecedented public commons, where human agency and nature are inextricably linked.
