[Experiencing Speech: A Skills-Based, Panlingual Approach to Actor Training](#) Andrea Caban,Julie Foh,Jeffrey Parker,2021-05-19 Experiencing Speech: A Skills-Based, Panlingual Approach to Actor Training is a beginner's guide to Knight-Thompson Speechwork®, a method that focuses on universal and inclusive speech training for actors from all language, racial, cultural, and gender backgrounds and identities. This book provides a progression of playful, practical exercises designed to build a truly universal set of speech skills that any actor can use, such as the ability to identify, discern, and execute every sound found in every language on the planet. By observing different types of flow through the vocal tract, vocal tract anatomy, articulator actions, and how these components can be combined, readers will understand and recreate the process by which language is learned. They will then be introduced to the International Phonetic Alphabet (IPA) and will practice using the IPA for narrow transcription of speech sounds. The book also offers both an intellectual and physical understanding of oral posture and how it contributes to vocal characterization and accent work. This approach to speech training is descriptive, giving students a wide and diverse set of speech sounds and skills to utilize for any character in any project, and it establishes a foundation for future accent study and acquisition. Experiencing Speech: A Skills-Based, Panlingual Approach to Actor Training is an excellent resource for teachers and students of speech and actor training, as well as aspiring actors looking to diversify their speech skills.

[Text, Speech and Dialogue](#) Petr Sojka,Ivan Kopecek,Karel Pala,2003-07-31 The workshop series on Text, Speech and Dialogue originated in 1998 with the ?rst TSD1998 held in Brno, Czech Republic. This year's TSD2000, already the third in the series, returns to Brno and to its organizers from the Faculty of Informatics at the Masaryk University. As shown by the ever growing interest in TSD series, this annual workshop developed into the prime meeting of speech and language researchers from both sides of the former Iron Curtain, which provides a unique opportunity to get acquainted with the current activities in all aspects of language communication and to witness the amazing vitality of researchers from the former East Block countries. Thanks need to be extended to all who continue to make the TSD workshop series such a success: ?rst, to the authors themselves, without whom TSD2000 would not exist; next, to all organizations that support TSD2000, among them the International Speech Communication Association, the Faculty of Informatics at the Masaryk University in Brno and the Faculty of Applied Sciences, West Bohemia University in Plzen; ? and last but not least,to the organizers and members of the Program Committee who spentmuch effort to make TSD2000 success and who reviewed 131 contributions submitted from all corners of the world and accepted 75 out of them for presentation at the workshop. This book is evidence of the success of all involved.

Musical Listening in the Age of Technological Reproduction Gianmario Borio,2016-04-29 It is undeniable that technology has made a tangible impact on the nature of musical listening. The new media have

changed our relationship with music in a myriad of ways, not least because the experience of listening can now be prolonged at will and repeated at any time and in any space. Moreover, among the more striking social phenomena ushered in by the technological revolution, one cannot fail to mention music's current status as a commodity and popular music's unprecedented global reach. In response to these new social and perceptual conditions, the act of listening has diversified into a wide range of patterns of behaviour which seem to resist any attempt at unification. Concentrated listening, the form of musical reception fostered by Western art music, now appears to be but one of the many ways in which audiences respond to organized sound. Cinema, for example, has developed specific ways of combining images and sounds; and, more recently, digital technology has redefined the standard forms of mass communication. Information is aestheticized, and music in turn is incorporated into pre-existing symbolic fields. This volume - the first in the series Musical Cultures of the Twentieth Century - offers a wide-ranging exploration of the relations between sound, technology and listening practices, considered from the complementary perspectives of art music and popular music, music theatre and multimedia, composition and performance, ethnographic and anthropological research.

Biomedical Signal Processing Arnon Cohen,2019-07-17 First published in 1986: The presentation of the material in the book follows the flow of events of the general signal processing system. After the signal has been acquired, some manipulations are applied in order to enhance the relevant information present in the signal. Simple, Optimal, and adaptive filtering are examples of such manipulations. The detection of wavelets is of importance in biomedical signals; they can be detected from the enhanced signal by several methods. The signal very often contains redundancies. When effective storing, transmission, or automatic classification are required, these redundancies have to be extracted.
