Natural Disaster Hotspots Maxx Dilley, 2005 This synthesis summarizes the findings of the Global Natural Disaster Risk Hotspots project. The Hotspots project generated a global disaster risk assessment and a set of more localized or hazard-specific case studies. The synthesis draws primarily from the results of the global assessment. Full details on the data, methods and results of the global analysis can be found in volume one of *Natural Disaster Hotspots: A Global Risk Analysis*. The case studies are contained in volume two (forthcoming).

Firm Innovation and Productivity in Latin America and the Caribbean Inter-American Development Bank, Matteo Grazzi, Carlo Pietrobelli, 2016-07-01 This volume uses the study of firm dynamics to investigate the factors preventing faster productivity growth in Latin America and the Caribbean, pushing past the limits of traditional macroeconomic analyses. Each chapter is dedicated to an examination of a different factor affecting firm productivity - innovation, ICT usage, on-the-job-training, firm age, access to credit, and international linkages - highlighting the differences in firm characteristics, behaviors, and strategies. By showcasing this remarkable heterogeneity, this collection challenges regional policymakers to look beyond one-size-fits-all solutions and create balanced policy mixes tailored to distinct firm needs. Fish to 2020 Christopher L. Delgado, 2003 The

seemingly inexhaustible oceans have proved to be finite after all. Capture of wild fish have leveled off since the mid-1980s, and many stocks of fish are fished so heavily that their future is threatened. And yet the world's appetite for fish has continued to increase, particularly as urban populations and incomes grow in developing countries. Aquaculture--fish farming--has arrived to meet this increased demand. Production of fish from aquaculture has exploded in the past 20 years and continues to expand around the world. But will aquaculture be sufficient to provide affordable fish to the world over the next 20 years? And what environmental and poverty problems will aquaculture face as it expands? Using a state-of-the-art computer model of global supply and demand for food and feed commodities, this book projects the likely changes in the fisheries sector over the next two decades. As prices for most food commodities fall, fish prices are expected to rise, reflecting demand for fish that outpaces the ability of the world to supply it. The model shows that developing countries will consume and produce a much greater share of the world's fish in the future, and trade in fisheries commodities will also increase. The authors show the causes and implications of these and other changes, and argue for specific actions and policies that can improve outcomes for the poor and for the environment.

Implementing the Water-Energy-Food- Ecosystems Nexus and Achieving the Sustainable Development Goals Cesar Carmona-Moreno,E. Crestaz,Y.

Cimmarrusti,F. Farinosi,M. Biedler,A. Amani,A.

Mishra,A. Carmona-Gutierrez,2021-09-15 The book's

primary intention is to serve as a roadmap for professionals working in developing countries interested in the Nexus Water-Energy-Food-Ecosystems (WEFE) approach. The book shows a multi-disciplinary approach, showcasing the importance of the proper use of Nexus WEFE when implementing certain development programs in regions around the globe. It can be presented as a manual for an individual that either wishes to implement intervention projects following the NEXUS approach or students interested in cooperation and development. The book begins with a general explanation of the theoretical concepts and implementation processes of Nexus WEFE and continues getting into case studies, explaining the importance of proper implementation and potential drawbacks and solutions to them. This book has a particular focus on the European Union cooperation policies when implementing such an approach in developing countries.

Insect and Hydroponic Farming in Africa Dorte

Verner, Nanna Roos, Afton Halloran, Glenn Surabian, Maximillian Ashwill, Saleema Vellani, Yasuo Konishi, 2021-12-16 Interestingly, some relief from today's woes may come from ancient human practices. While current agri-food production models rely on abundant supplies of water, energy, and arable land and generate significant greenhouse gas emissions in addition to forest and biodiversity loss, past practices point toward more affordable and sustainable paths. Different forms of insect farming and soilless crop farming, or hydroponics, have existed for centuries. In this report the authors make a persuasive case that frontier agriculture, particularly insect and

hydroponic farming, can complement conventional agriculture. Both technologies reuse society's agricultural and organic industrial waste to produce nutritious food and animal feed without continuing to deplete the planet's land and water resources, thereby converting the world's wasteful linear food economy into a sustainable, circular food economy. As the report shows, insect and hydroponic farming can create jobs, diversify livelihoods, improve nutrition, and provide many other benefits in African and fragile, conflict-affected countries. Together with other investments in climate-smart agriculture, such as trees on farms, alternate wetting and drying rice systems, conservation agriculture, and sustainable livestock, these technologies are part of a promising menu of solutions that can help countries move their land, food, water, and agriculture systems toward greater sustainability and reduced emissions. This is a key consideration as the World Bank renews its commitment to support countries' climate action plans. This book is the Bank's first attempt to look at insect and hydroponic farming as possible solutions to the world's climate and food and nutrition security crisis and may represent a new chapter in the Bank's evolving efforts to help feed and sustain the planet.

2016 Global Food Policy Report International Food Policy Research Institute (IFPRI), 2016-03-31
The Global Food Policy Report is IFPRI's flagship publication. This year's annual report examines

major food policy issues, global and regional developments, and commitments made in 2015, and presents data on key food policy indicators. The report also proposes key policy options for 2016 and beyond to achieve the Sustainable Development Goals. In 2015, the global community made major commitments on sustainable development and climate change. The global food system lies at the heart of these commitments—and we will only be able to meet the new goals if we work to transform our food system to be more inclusive, climate-smart, sustainable, efficient, nutrition- and health-driven, and business-friendly.

The Influence of Global Environmental Change on Infectious Disease Dynamics Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2014-09-03
The twentieth century witnessed an era of unprecedented, large-scale, anthropogenic changes to the natural environment. Understanding how environmental factors directly and indirectly affect the emergence and spread of infectious disease has assumed global importance for life on this planet. While the causal links between environmental change and disease emergence are complex, progress in understanding these links, as well as how their impacts may vary across space and time, will require

transdisciplinary, transnational, collaborative research. This research may draw upon the expertise, tools, and approaches from a variety of disciplines. Such research may inform improvements in global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health. The Influence of Global Environmental Change on Infectious Disease Dynamics is the summary of a workshop hosted by the Institute of Medicine Forum on Microbial Threats in September 2013 to explore the scientific and policy implications of the impacts of global environmental change on infectious disease emergence, establishment, and spread. This report examines the observed and potential influence of environmental factors, acting both individually and in synergy, on infectious disease dynamics. The report considers a range of approaches to improve global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health in the face of ongoing global environmental change.

Radiotherapy in Cancer Care International Atomic Energy Agency, Eduardo Zubizarreta, 2017-11-28
Cancer treatment is complex and calls for a diverse set of services. Radiation therapy is recognized as an essential tool in the cure and palliation of cancer. Currently, access to radiation treatment is limited in many countries and non-existent in some. This lack of radiation therapy resources exacerbates the burden of disease and underscores the continuing health care disparity among States. Closing this gap

represents an essential measure in addressing this global health equity problem. This publication presents a comprehensive overview of the major topics and issues to be taken into consideration when planning a strategy to address this problem, in particular in low and middle income countries. With contributions from leaders in the field, it provides an introduction to the achievements and issues of radiation therapy as a cancer treatment modality around the world. Dedicated chapters focus on the new radiotherapy technologies, proton beams, carbon ion, intraoperative radiotherapy, radiotherapy for children, treatment of HIV-AIDS malignancies, and costing and quality management issues.

Child Welfare, Protection, and Justice Murli Desai, 2021-02-24 This Element first reviews the limitations of the concepts of problems in childhood. It proposes a universal, comprehensive, and longitudinal conceptual framework of problems in childhood, their differential context, and their cyclical effects. Based on the linkages identified in the children's problems, they are divided into three levels, primary, secondary, and tertiary. The Element then reviews the concepts and the limitations of the prevalent service delivery approaches of child welfare, protection, and justice, because of which these services have not helped to break the cycle of problems in childhood. The Element identifies the rights-based comprehensive, preventive, and systemic approach for child welfare, at primary, secondary and tertiary prevention levels, in order to break this cycle of problems. Finally, the Element goes into

details of the tertiary prevention level integrated service delivery for children facing socio-legal problems.

Managing Disaster Risk in Mexico Alcira Kreimer, 1999-01-01 Disaster Risk Management Series. Since 1980, Mexico has suffered from 79 disaster events. Over half of these disasters were weather related, such as hurricanes or flooding. One fourth of them were geology related, that is, volcanic eruptions, landslides, or earthquakes. The rest of them were instigated by humans in the form of industrial accidents, chemical and oil spills, explosions, and structural fires. Mexico was chosen for the first appraisal mission due to its experience with natural disaster losses, and because it is considering significant public policy changes in the realm of insurance regulations. The World Bank established the Disaster Management Facility in July 1999 to provide proactive leadership in coordinating efforts to introduce disaster prevention and mitigation practices in development-related activities. This report synthesizes the findings of a World Bank mission to Mexico on disaster management, mitigation, and financing, which was followed up by a workshop to discuss those findings. The scope of this study is quite broad and examines the following issues: -- Mexico's experience with disasters of all kinds; -- how risk and vulnerability are assessed and can be assessed as a means toward greater mitigation, that is, better planning and construction standards; -- disaster mitigation in practice; -- the specific contribution that the insurance

industry can make to disaster mitigation in Mexico, and why this industry is so underutilized at present; and, -- the government's role in risk transfer as a way of enhancing mitigation especially through the operation of its Natural Disaster Fund, FONDEN.

International Monetary Fund Annual Report 1979
International Monetary Fund, 1979-09-03 This paper reviews key findings of the IMF's Annual Report for the fiscal year ended April 30, 1979. The report highlights that the performance of the world economy during 1978 and the first half of 1979 was characterized by a mixture of gains and disappointments. The evolution of domestic demand in several of the largest industrial countries proceeded broadly along the lines of a strategy of policy that had been agreed in various international forums. This development was beneficial to the distribution of external current

account balances among individual countries within the industrial group.
