Light Elements in the Universe (IAU S268) International Astronomical Union. Symposium,2010-05-13 IAU Symposium 268 presents an overview of the most recent observational and theoretical research on the formation and evolution of light elements in the Universe: H, He, Li, Be, B, and their isotopes. Astrophysicists from a variety of subfields discuss recent developments that will improve our understanding of the light elements and provide important clues to stellar and galactic evolution, Big Bang nucleosynthesis, and cosmology. Striking observational progress has been achieved recently through the advent of next generation ground- and space-based telescopes, such as the cosmic microwave background experiments that allow the accurate determination of the baryon density of the Universe. New theoretical breakthroughs in describing stellar interiors and the chemical evolution of complex systems and the remaining challenges in this field are also addressed. This critical review is a useful resource for all those interested in the chemical evolution of the Universe.

Vehicle-to-Grid Lance Noel,Gerardo Zarazua de Rubens,Johannes Kester,Benjamin K. Sovacool,2019-01-04 This book defines and charts the barriers and future of vehicle-to-grid

technology: a technology that could dramatically reduce emissions, create revenue, and accelerate the adoption of battery electric cars. This technology connects the electric power grid and the transportation system in ways that will enable electric vehicles to store renewable energy and offer valuable services to the electricity grid and its markets. To understand the complex features of this emergent technology, the authors explore the current status and prospect of vehicle-to-grid, and detail the sociotechnical barriers that may impede its fruitful deployment. The book concludes with a policy roadmap to advise decision-makers on how to optimally implement vehicle-to-grid and capture its benefits to society while attempting to avoid the impediments discussed earlier in the book.

Membrane Proteins Giovanna Ghirlanda, Alessandro Senes, 2016-08-23 Focusing on model systems for the study of structure, folding, and association in the membrane, *Membrane Proteins: Folding, Association, and Design* presents an overview of methods that can be applied to these intricate systems. The volume is divided into four detailed sections, covering association of transmembrane helices, interactions with the lipid bilayer, NMR methods, as well as a variety of engineering approaches. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Membrane Proteins: Folding, Association, and Design* serves as an ideal guide for researchers reaching for the tantalizing

possibility of designing novel membrane proteins with tailored functionality.

Task Buster Walnut Creek CDROM (Firm),1996 This collection of time-saving utilities provides any PC user with a unique and essential resource. The book comes with viewers for DOS, Windows 3.1 (16-bit), and Windows 95 and NT. It also includes an easy-to-use browser for Windows and MS-DOS.

Rehabilitation Medicine for Elderly Patients Stefano Masiero,Ugo Carraro,2017-09-04 This book clearly explains when and how different rehabilitation techniques should be applied in the aging patient, thereby enabling readers to identify and apply those rehabilitation strategies that will maximize quality of life and functional independence in individual cases. It is specifically designed for ease of consultation and rapid retrieval of the information most relevant to clinical practice. Prominence is given to the benefits of a multidisciplinary approach to rehabilitation, with discussion of a very wide range of aspects of rehabilitation in different disease settings. The breadth of coverage is illustrated by the attention paid to less commonly addressed topics such as visual and hearing rehabilitation, the role of robotics and 3D imaging techniques, variations in approach among health care systems, and rehabilitation in end-of-life care. The authors are international academic experts in their fields, guaranteeing a high scientific standard throughout. This manual will be an invaluable tool and source of knowledge for geriatricians and physiatrists but will also appeal to a wider range of clinicians, practitioners, and students.
