Signposts in Cyberspace National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Internet Navigation and the Domain Name System: Technical Alternatives and Policy Implications, 2005-08-07 The Domain Name System (DNS) enables user-friendly alphanumeric names—domain names—to be assigned to Internet sites. Many of these names have gained economic, social, and political value, leading to conflicts over their ownership, especially names containing trademarked terms. Congress, in P.L. 105-305, directed the Department of Commerce to request the NRC to perform a study of these issues. When the study was initiated, steps were already underway to address the resolution of domain name conflicts, but the continued rapid expansion of the use of the Internet had raised a number of additional policy and technical issues. Furthermore, it became clear that the introduction of search engines and other tools for Internet navigation was affecting the DNS. Consequently, the study was expanded to include policy and technical issues related to the DNS in the context of Internet navigation. This report presents the NRC's assessment of the current state and future prospects of the DNS and Internet navigation, and its conclusions and recommendations concerning key technical and policy issues.

International Domain Name Law David Lindsay, 2007-12-14 The Domain Name System (DNS), which matches computer addresses to human-friendly domain names, has given rise to many legal issues. Two important issues are the institutional arrangements for governing the DNS and the use of trade marks as domain names. This book is the first complete statement of this rapidly-evolving area of the law. In particular, the book includes a comprehensive statement of decisions under the Uniform Domain Name Dispute Resolution Policy (UDRP), the international system for resolving disputes between trade mark owners and domain name registrants. In this path-breaking work the author examines the extent to which principles of national trade mark law have been used in UDRP decisions. It will be essential reading for anyone, whether academic or practitioner, interested in internet law, intellectual property, and e-commerce law.
