Historical Painting Techniques, Materials, and Studio Practice Arie Wallert, Erma Hermens, Marja Peek, 1995-08-24 Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled Historical Painting Techniques, Materials, and Studio Practice at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

The Renewal of Pagan Antiquity Aby Warburg, 1999 A collection of essays by the art historian Aby Warburg, these essays look beyond iconography to more psychological aspects of artistic creation: the conditions under which art was practised; its social and cultural contexts; and its conceivable historical meaning.

Innovations and Implementations of Computer Aided Drug Discovery Strategies in Rational Drug Design Sanjeev Kumar Singh,2021-02-02 This book presents

various computer-aided drug discovery methods for the design and development of ligand and structure-based drug molecules. A wide variety of computational approaches are now being used in various stages of drug discovery and development, as well as in clinical studies. Yet, despite the rapid advances in computer software and hardware, combined with the exponential growth in the available biological information, there are many challenges that still need to be addressed, as this book shows. In turn, it shares valuable insights into receptor-ligand interactions in connection with various biological functions and human diseases. The book discusses a wide range of phylogenetic methods and highlights the applications of Molecular Dynamics Simulation in the drug discovery process. It also explores the application of quantum mechanics in order to provide better accuracy when calculating protein-ligand binding interactions and predicting binding affinities. In closing, the book provides illustrative descriptions of major challenges associated with computer-aided drug discovery for the development of therapeutic drugs. Given its scope, it offers a valuable asset for life sciences researchers, medicinal chemists and bioinformaticians looking for the latest information on computer-aided methodologies for drug development, together with their applications in drug discovery.

The Rasputin Effect: When Commensals and Symbionts Become Parasitic

Christon J. Hurst, 2016-07-05 This volume focuses on those instances when benign and even beneficial relationships between microbes and their hosts opportunistically change and become detrimental toward the host. It examines the triggering events which can factor into these changes, such as reduction in the host's capacity for mounting an effective defensive response due to nutritional deprivation, coinfections and seemingly subtle environmental influences like the amounts of sunlight, temperature, and either water or air quality. The effects of environmental changes can be compounded when they necessitate a physical relocation of species, in turn changing the probability of encounter between microbe and host. The change also can result when pathogens, including virus species, either have modified the opportunist or attacked the host's protective natural microflora. The authors discuss these opportunistic interactions and assess their outcomes in both aquatic as well as terrestrial ecosystems, highlighting the impact on plant,

invertebrate and vertebrate hosts.

Prehistoric Maritime Cultures and Seafaring in East Asia Chunming Wu, Barry Vladimir Rolett, 2019-12-03 This book focuses on prehistoric East Asian maritime cultures that pre-dated the Maritime Silk Road, the Four Seas and Four Oceans navigation system recorded in historical documents of ancient China. Origins of the Maritime Silk Road can be traced to prosperous Neolithic and Metal Age maritime-oriented cultures dispersed along the coastlines of prehistoric China and Southeast Asia. The topics explored here include Neolithisation and the development of prehistoric maritime cultures during the Neolithic and early Metal Age; the expansion and interaction of these cultures along coastlines and across straits; the two-layer hypothesis for explaining genetic and cultural diversity in south China and Southeast Asia; prehistoric seafaring and early sea routes; the paleogeography and vegetation history of coastal regions; Neolithic maritime livelihoods based on hunting/fishing/foraging adaptations; rice and millet cultivation and their dispersal along the coast and across the open sea; and interaction between farmers and maritime-oriented hunter/fisher/foragers. In addition, a series of case studies enhances understanding of the development of prehistoric navigation and the origin of the Maritime Silk Road in the Asia-Pacific region.

Banksy Ulrich Blanché, 2016-01-18 About this Book / Bristol born Banksy is usually categorized as a Street Artist, although his art, in content and form, transcends a narrow understanding of this term. This publication primarily deals with Banksy as a contemporary Urban Artist and his relationship with consumer culture. It examines Banksy not only in light of his illicit work on the street, but also in regard to his gallery exhibitions. The study highlights representative works of his art, pieces which demonstrate his versatility, but also stand for different periods of his oeuvre. This book presents the first academic study of Banksy's art in English; with a history and discussion of the terms Graffiti, Street Art and Urban Art and a rich array of biographical information. It will be of interest to academics and the general public as well. About this Edition / Street Artist Banksy and former Young British artist Damien Hirst are two of

the most popular representatives of British contemporary art. Situated in a triangle of art, consumerism and pop culture their work is among the most well-known. A systematic academic study of their artistic viewpoints and references to consumer culture has long been missing, and Ulrich Blanche is finally closing this gap: He examines Hirst's and Banksy's art against the background of the London art scene since 1980. Blanche points out connections to Duchamp, Warhol and Koons, and reflects on the role of the observer, the meaning of location and, especially, the references between art, consumer culture and marketing in their pieces. This two volume edition is the translated and expanded version of the authors dissertational thesis.
