2 The Domain Name Registration System Jenny Ng,2013 This book offers a comparative analysis of the domain name registration systems in Australia and the United Kingdom. It analyses global trends and international perspectives of domain name registration systems and the dynamics in the respective domain name systems. The research project explores the advantages and disadvantages of the restrictive domain name registration system and the less restrictive registration system by addressing issues of consumer protection and promoting growth in the number of domain name registrations. The book analyses several different types of domain name registration systems and analyses the regulatory frameworks in the restrictive and unrestrictive registration systems. It considers recent developments in this area such as the new transfer rules in Australia which allows for the sale of domain name licence, the new Business Name Registration rules due to enter into force in 2011 in Australia, and the new policy rules on domain name dispute resolution in the United Kingdom. Jenny Ng also examines the legal and economic implications of these regulatory frameworks, drawing upon economic theory, regulatory and systems theory as well as legal analysis and comparison of regulatory frameworks. In doing so the work puts forwards ways in which such systems could be better designed to reflect the needs of the specific circumstances in individual jurisdictions--Provided by publisher.

2 The Current State of Domain Name Regulation Konstantinos Komaitis,2010-07-12 Identifies a tripartite problem - intellectual, institutional and ethical - inherent in the domain name regulation culture. This book discusses domain names as sui generis 'e-property' rights and analyses years of experience, through the Uniform Domain Name Dispute Resolution Policy (UDRP) and the Anticybersquatting Consumer Protection Act (ACPA).

2 Signposts in Cyberspace National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Internet Navigation and the Domain Name System: Technical Alternatives and Policy Implications,2005-08-07 The Domain Name System (DNS) enables user-friendly alphanumeric names to be assigned to Internet sites. Many of these names have gained economic, social, and political value, leading to conflicts over their ownership, especially names containing trademarked terms. Congress, in P.L. 105-305, directed the Department of Commerce to request the NRC to perform a study of these issues. When the study was initiated, steps were already underway to address the resolution of domain name conflicts, but the continued rapid expansion of the use of the Internet had raised a number of additional policy and technical issues. Furthermore, it became clear that the introduction of search engines and other tools for Internet navigation was affecting the DNS. Consequently, the study was expanded to include policy and technical issues related to the DNS in the context of Internet navigation. This report presents the NRC's assessment of the current state and future prospects of the DNS and Internet navigation, and its conclusions and recommendations concerning key technical and policy issues.

2 Protection of Geographic Names in International Law and Domain Name System Policy Heather Ann Forrest,2013 The Internet Corporation for Assigned Names and Numbers (ICANN), the body charged with operational and policy authority over the Domain Name System (DNS), is developing a set of criteria to expand the Internet community's power to name and design its own domains. This initiative presents an opportunity to clarify policy on some contentious issues, including the treatment of geographic names. However, it is by no means clear whether the possibility of recourse to geographical names is compatible with international law. Is it lawful and possible to allocate domain names named after continents, regions, countries, cities and other geographic areas? Who is entitled to use these denominations? Offering a comprehensive analysis of a field which at present raises more questions than answers, this book examines the implications of positive international law to assess the extent to which geographical names are currently protected by different titles, and to what extent they can be exclusively claimed by governments in defence of territorial prerogatives. In the course of the analysis an entirely new field of international economic law emerges, as a number of distinct areas of law intersect and engage with such diverse legal issues as the following: intellectual property unfair competition issues of Internet governance the role of 'soft law' the extent to which rights in geographic names are recognized in trademark law geographical indications international human rights to national identity, self-determination, freedom of expression, culture, language, and property 'bad actors' rights recognition and challenge mechanisms controversial and 'geopolitical' names; and dispute resolution policy. Demonstrating beyond a doubt that a great number of different legal facets will need to be taken into account, this remarkable and far-seeing work offers a valuable contribution to shaping future rules in the field of Internet domain name allocation. It is sure to be of the greatest interest both to practitioners and to academics focusing on Internet governance and its challenges in the process of legal globalization.

2 Internet Domain Names Lennard Kruger,2014-10-31 Navigating the Internet requires using addresses and corresponding names that identify the location of individual computers. The Domain Name System (DNS) is the distributed set of databases residing in computers around the world that contain address numbers mapped to corresponding domain names, making it possible to send and receive messages and to access information from computers anywhere on the Internet.  **INTERNATIONAL DOMAIN NAME LAW** DAVID LINDSAY, 2007-12-31 The Domain Name System (DNS), which matches computer addresses to human-friendly domain names, has given rise to many legal issues. Two important issues are the institutional arrangements for governing the DNS and the use of trade marks as domain names. This book is the first complete statement of this rapidly-evolving area of the law. In particular, the book includes a comprehensive statement of decisions under the Uniform Domain Name Dispute Resolution Policy (UDRP), the international system for resolving disputes between trade mark owners and domain name registrants. In this path-breaking work the author examines the extent to which principles of national trade mark law have been used in UDRP decisions. It will be essential reading for anyone, whether academic or practitioner, interested in internet law, intellectual property, and e-commerce law.
