**Global Study on Smuggling of Migrants 2018** United Nations,2019-02 This study shows that migrant smuggling routes affect every part of the world. It is based on an extensive review of existing data and literature. The study presents detailed information about key smuggling routes, such as the magnitude, the profiles of smugglers and smuggled migrants, the modus operandi of smugglers and the risks that smuggled migrants face. It shows that smugglers use land, air and sea routes - and combinations of those - in their quest to profit from people's desire to improve their lives. Smugglers also expose migrants to a range of risks; violence, theft, exploitation, sexual violence, kidnapping and even death along many routes.

*World Drug Report 2015* United Nations Office on Drugs and Crime,2015-12-16 The World Drug Report provides an annual overview of recent developments for various drug categories. Chapter one of the World Drug Report 2015 provides a global overview of the latest developments with respect to opiates, cocaine, cannabis and synthetic drugs, ranging from production to trafficking as well as consumption and the health impact of drug use. Chapter two focuses on Alternative Development, its relation to illicit cultivation, and also within the broader context of the development agenda.

*Pioneering Women in American Mathematics* Judy Green,Jeanne LaDuke,2009-01 More than 14 percent of the PhD's awarded in the United States during the first four decades of the twentieth century went to women, a proportion not achieved again until the 1980s. This book is the result of a study in which the authors identified all of the American women who earned PhD's in mathematics before 1940, and collected extensive biographical and bibliographical information about each of them. By reconstructing as complete a picture as possible of this group of women, Green and LaDuke reveal insights into the larger scientific and cultural communities in which they lived and worked. The book contains an extended introductory essay, as well as biographical entries for each of the 228 women in the study. The authors examine family backgrounds, education, careers, and other professional activities. They show that there were many more women earning PhD's in mathematics before 1940 than is commonly thought. Extended biographies and bibliographical information are available from the companion website for the book: [www.ams.org/bookpages/hmath-34](http://www.ams.org/bookpages/hmath-34). The material will be of interest to researchers, teachers, and students in mathematics, history of mathematics, history of science, women's studies, and sociology. The data presented about each of the 228 individual members of the group will support additional study and analysis by scholars in a large number of disciplines.

**A Cruel Wind** Dorothy Ann Pettit,Janice Bailie,2008 The flu pandemic that began in 1918 touched with illness virtually every family in America. It was a devastating time, far overshadowing the carnage of World War I as the pandemic killed more people in less time than any disease before or since. With 25% to 30% of the worlds population having clinically apparent illnesses and a mortality rate of 2.5% - 5%, it is believed that more than 675,000 Americans were among the 50-100 million that died worldwide. Because many experts believe that it is not a matter of if the world will encounter another 1918-like flu pandemic, but when, this social history of the pandemic should be considered essential reading for students, public health officials, doctors, nurses, journalists, and those in

government office, interested in learning what worked and didn't during that grim time.

Global Burden of Disease and Risk Factors Alan D. Lopez, 2006-04-02 Strategic health planning, the cornerstone of initiatives designed to achieve health improvement goals around the world, requires an understanding of the comparative burden of diseases and injuries, their corresponding risk factors and the likely effects of intervention options. The Global Burden of Disease framework, originally published in 1990, has been widely adopted as the preferred method for health accounting and has become the standard to guide the setting of health research priorities. This publication sets out an updated assessment of the situation, with an analysis of trends observed since 1990 and a chapter on the sensitivity of GBD estimates to various sources of uncertainty in methods and data.

Transforming Food Systems for a Rising India Prabhu Pingali, Anaka Aiyar, Mathew Abraham, Andaleeb Rahman, 2019-05-22 This open access book examines the interactions between India's economic development, agricultural production, and nutrition through the lens of a "Food Systems Approach (FSA)." The Indian growth story is a paradoxical one. Despite economic progress over the past two decades, regional inequality, food insecurity and malnutrition problems persist. Simultaneously, recent trends in obesity along with micro-nutrient deficiency portend to a future public health crisis. This book explores various challenges and opportunities to achieve a nutrition-secure future through diversified production systems, improved health and hygiene environment and greater individual capability to access a balanced diet contributing to an increase in overall productivity. The authors bring together the latest data and scientific evidence from the country to map out the current state of food systems and nutrition outcomes. They place India within the context of other developing country experiences and highlight India's status as an outlier in terms of the persistence of high levels of stunting while following global trends in obesity. This book discusses the policy and institutional interventions needed for promoting a nutrition-sensitive food system and the multi-sectoral strategies needed for simultaneously addressing the triple burden of malnutrition in India.

Drawing on 2020 filing, registration and renewals statistics from national and regional IP offices and WIPO, it covers patents, utility models, trademarks, industrial designs, microorganisms, plant variety protection and geographical indications. The report also draws on survey data and industry sources to give a picture of activity in the publishing industry.

*Recent Progress in Slow Sand and Alternative Biofiltration Processes* Rolf Gimbel, Nigel Graham, M. Robin Collins, 2006-03-31 Slow sand filtration is typically cited as being the first engineered process in drinking-water treatment. Proven modifications to the conventional slow sand filtration process, the awareness of induced biological activity in riverbank filtration systems, and the growth of oxidant-induced biological removals in more rapid-rate filters (e.g. biological activated carbon) demonstrate the renaissance of biofiltration as a treatment process that remains viable for both small, rural communities and major

cities. Biofiltration is expected to become even more common in the future as efforts intensify to decrease the presence of disease-causing microorganisms and disinfection by-products in drinking water, to minimize microbial regrowth potential in distribution systems, and where operator skill levels are emphasized. Recent Progress in Slow Sand and Alternative Biofiltration Processes provides a state-of-the-art assessment on a variety of biofiltration systems from studies conducted around the world. The authors collectively represent a perspective from 23 countries and include academics, biofiltration system users, designers, and manufacturers. It provides an up-to-date perspective on the physical, chemical, biological, and operational factors affecting the performance of slow sand filtration (SSF), riverbank filtration (RBF), soil-aquifer treatment (SAT), and biological activated carbon (BAC) processes. The main themes are: comparable overviews of biofiltration systems; slow sand filtration process behavior, treatment performance and process developments; and alternative biofiltration process behaviors, treatment performances, and process developments.
