Communicating Process Architectures 2015 & 2016 K. Chalmers,J. Bækgaard Pedersen,F.R.M. Barnes,2018-10-04 This book presents the proceedings of two conferences, the 37th and 38th in the WoTUG series; Communicating Process Architectures (CPA) 2015, held in Canterbury, England, in August 2015, and CPA 2016, held in Copenhagen, Denmark, in August 2016. Fifteen papers were accepted for presentation at the 2015 conference. They cover a spectrum of concurrency concerns: mathematical theory, programming languages, design and support tools, verification, multicore infrastructure and applications ranging from supercomputing to embedded. Three workshops and two evening fringe sessions also formed part of the conference, and the workshop position papers and fringe abstracts are included in this book. Fourteen papers covering the same broad spectrum of topics were presented at the 2016 conference, one of them in the form of a workshop. They are all included here, together with abstracts of the five fringe sessions from the conference.

Reviews in Computational Chemistry, Volume 10 Kenny B. Lipkowitz, Donald B. Boyd, 2009-09-22 Not only a major reference work for sale to the library market, Reviews in Computational Chemistry is now a purchase by individuals due to the explosive growth in the use of computational chemistry throughout many scientific disciplines. In an instructional and nonmathematical style, these books provide an access to computational methods often outside a researcher's area of expertise. Volumes 9 & 10 represent the next two volumes in the successful series designed to help the chemistry community keep current with the many new developments in computational techniques. Many chapters are written as tutorials to introduce the many facets of computational chemistry, including molecular modeling, computer-assisted molecular design (CAMD), quantum chemistry, molecular mechanics and dynamics, and quantitative structure-activity relationships (QSAR). The authors provide necessary background and theory, strategies for implementing the methods, pitfalls to avoid, applications, and references.

DSP Integrated Circuits Lars Wanhammar, 1999-02-24 DSP Integrated Circuits establishes the essential interface between theory of digital signal processing algorithms and their implementation in full-custom CMOS technology. With an emphasis on techniques for co-design of DSP algorithms and hardware in order to achieve high performance in terms of throughput, low power consumption, and design effort, this book provides the professional engineer, researcher, and student with a firm foundation in the theoretical as well as the practical aspects of designing high performance DSP integrated circuits. Centered around three design case studies, DSP Integrated Circuits thoroughly details a high-performance FFT processor, a 2-D Discrete Cosine Transform for HDTV, and a wave digital filter for interpolation of the sampling frequency. The case studies cover the essential parts of the design process in a top-down manner, from specification of algorithm design and optimization, scheduling of operations, synthesis of optimal architectures, realization of processing elements, to the floor-planning of the integrated circuit. Details the theory and design of digital filters - particularly wave digital filters, multi-rate digital filters, fast Fourier transforms (FFT's), and discrete cosine transforms (DCT's) Follows three complete real-world case

studies throughout the book Provides complete coverage of finite word length effects in DSP algorithms In-depth survey of the computational properties of DSP algorithms and their mapping to optimal architectures Outlines DSP architectures and parallel, bit-serial, and distributed arithmetic Presents the design process in a top-down manner and incorporates numerous problems and solutions

Eerdmans Commentary on the Bible: First and Second Samuel Graeme Auld, 2019-06-18 This extract from the Eerdmans Commentary on the Bible provides Auld's introduction to and concise commentary on First and Second Samuel. The Eerdmans Commentary on the Bible presents, in nontechnical language, the best of modern scholarship on each book of the Bible, including the Apocrypha. Reader-friendly commentary complements succinct summaries of each section of the text and will be valuable to scholars, students, and general readers. Rather than attempt a verse-by-verse analysis, these volumes work from larger sense units, highlighting the place of each passage within the overarching biblical story. Commentators focus on the genre of each text—parable, prophetic oracle, legal code, and so on—interpreting within the historical and literary context. The volumes also address major issues within each biblical book—including the range of possible interpretations—and refer readers to the best resources for further discussions.

The Art of Meditation and the French Renaissance Love Lyric Michael Giordano, 2010-01-01 The Art of Meditation and the French Renaissance Love Lyric examines the poetics of meditation in the French love lyric at the height of the Lyonnais Renaissance as illustrated by one of the country's most prominent writers. Maurice Scève's *Délie* is the first French sequence of poems devoted to a single woman in the manner of Petrarch's *Rime*. It is also the first Renaissance work to use emblems in a sustained work on love. At their core, most amatory lyrics involve a triple relation among lover, beloved, and the meaning of love. Whether the poet-lover is a man or woman, poetic discourse generally takes the form of an interior monologue frequently intermingled with direct and indirect address to the beloved. Though the dominant quality of this lyric is personal introspection, Michael Giordano finds *Délie* to be consistent with traditions of Christian meditation. He argues that the amatory lyric served as a vehicle for contests of value and paradigm change not only because it was conditioned both by sacred and profane sources, but also because it occurred at a time of religious upheaval and scientific revolution.
