Video Games Kathy Ceceri,2015-09-21 Catch a glimpse inside a school bus and you'll

see lots of kids looking down. What are they doing? They're deciding on strategy, building cities, setting traps for monsters, sharing resources, and nurturing critical relationships. Over 90 percent of kids ages 2–17 play video games. In Video Games: Design and Code Your Own Adventure, young readers learn why games are so compelling and what ancient games such as mancala have in common with modern games like Minecraft. Kids will even create their very own video games using software such as MIT's Scratch! Using a familiar, high-interest subject, Video Games introduces foundation subjects such as geometry, physics, probability, and psychology in a practical framework. Building Tetris pieces out of Rice Crispie Treats and designing board games are some of the hands-on projects that engage readers' building skills, while writing actual game code opens digital doors readers may not have known existed.

Learning Science Through Computer Games and Simulations National Research Council,Division of Behavioral and Social Sciences and Education,Board on Science Education,Committee on Science Learning: Computer Games, Simulations, and Education,2011-05-12 At a time when scientific and technological competence is vital to the nation's future, the weak performance of U.S. students in science reflects the uneven quality of current science education. Although young children come to school with innate curiosity and intuitive ideas about the world around them, science classes rarely tap this potential. Many experts have called for a new approach to science education, based on recent and ongoing research on teaching and learning. In this approach, simulations and games could play a significant role by addressing many goals and mechanisms for learning science: the motivation to learn science, conceptual understanding, science process skills,

understanding of the nature of science, scientific discourse and argumentation, and identification with science and science learning. To explore this potential, Learning Science: Computer Games, Simulations, and Education, reviews the available research on learning science through interaction with digital simulations and games. It considers the potential of digital games and simulations to contribute to learning science in schools, in informal out-of-school settings, and everyday life. The book also identifies the areas in which more research and research-based development is needed to fully capitalize on this potential. Learning Science will guide academic researchers; developers, publishers, and entrepreneurs from the digital simulation and gaming community; and education practitioners and policy makers toward the formation of research and development partnerships that will facilitate rich intellectual collaboration. Industry, government agencies and foundations will play a significant role through start-up and ongoing support to ensure that digital games and simulations will not only excite and entertain, but also motivate and educate.

We the Gamers Karen Schrier,2021-04-30 Distrust. Division. Disparity. Is our world in disrepair? Ethics and civics have always mattered, but perhaps they matter now more than ever before. Recently, with the rise of online teaching and movements like #PlayApartTogether, games have become increasingly acknowledged as platforms for civic deliberation and value sharing. We the Gamers explores these possibilities by examining how we connect, communicate, analyze, and discover when we play games. Combining research-based perspectives and current examples, this volume shows how games can be used in ethics, civics, and social studies education to inspire learning, critical thinking, and civic change. We the Gamers introduces and explores various educational frameworks through a range of games and interactive experiences including board and card games, online games, virtual reality and augmented reality games, and digital games like Minecraft, Executive Command, Keep Talking and Nobody Explodes, Fortnite, When Rivers Were Trails, Politicraft, Quandary, and Animal Crossing: New Horizons. The book systematically evaluates the types of skills, concepts, and knowledge needed for civic and ethical engagement, and details how games can foster these skills in

classrooms, remote learning environments, and other educational settings. We the Gamers also explores the obstacles to learning with games and how to overcome those obstacles by encouraging equity and inclusion, care and compassion, and fairness and justice. Featuring helpful tips and case studies, We the Gamers shows teachers the strengths and limitations of games in helping students connect with civics and ethics, and imagines how we might repair and remake our world through gaming, together.

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt,2017-08-08 This book combines elementary theory from computer science with real-world challenges in global geodetic observation, based on examples from the Geodetic Observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System (GGOS) with regard to "Industry 4.0".
