A Revision of the Dulcamaroid Clade of Solanum L. (Solanaceae) Sandra Knapp,2013-05-10 This volume is a monograph of the 47 species of the Dulcamaroid clade of the large and diverse genus Solanum. Species in the group occur in North, Central and South America, and in Europe and Asia. The group is most species-rich in Peru and Brazil, and three of the component species, Solanum laxum of Brazil, Solanum seforthianum of the Caribbean and Solanum crispum of Chile are cultivated in many parts of the world. All species are illustrated and a distribution map of each is provided. All names are typified and nomenclatural and bibliographic details for all typifications presented. One new species from Ecuador is described. The monograph is the first complete taxonomic treatment of these species since the worldwide monograph of Solanum done by the French botanist Michel-Felix Dunal in 1852.

3D Imaging, Analysis and Applications Yonghuai Liu,Nick Pears,Paul L. Rosin,Patrik Huber,2020-09-11 This textbook is designed for postgraduate studies in the field of 3D Computer Vision. It also provides a useful reference for industrial practitioners; for example, in the areas of 3D data capture, computer-aided geometric modelling and industrial quality assurance. This second edition is a significant upgrade of existing topics with novel findings. Additionally, it has new material covering consumer-grade RGB-D cameras, 3D morphable models, deep learning on 3D datasets, as well as new applications in the 3D digitization of cultural heritage and the 3D phenotyping of crops. Overall, the book covers three main areas: ● 3D imaging, including passive 3D imaging, active triangulation 3D imaging, active time-of-flight 3D imaging, consumer RGB-D cameras, and 3D data representation and visualisation; ● 3D shape analysis, including local descriptors, registration, matching, 3D morphable models, and deep learning on 3D datasets; and ● 3D applications, including 3D face recognition, cultural heritage and 3D phenotyping of plants. 3D computer vision is a rapidly advancing area in computer science. There are many real-world applications that demand high-performance 3D imaging and analysis and, as a result, many new techniques and commercial products have been developed. However, many challenges remain on how to analyse the captured data in a way that is sufficiently fast, robust and accurate for the application. Such challenges include metrology, semantic segmentation, classification and recognition. Thus, 3D imaging, analysis and their applications remain a highly-active research field that will continue to attract intensive attention from the research community with the ultimate goal of fully automating the 3D data capture, analysis and inference pipeline.

Self-Concept Clarity Jennifer Lodi-Smith,Kenneth G. DeMarree,2018-01-03 This welcome resource traces the evolution of self-concept clarity and brings together diverse strands of research on this important and still-developing construct. Locating self-concept clarity within current models of personality, identity, and the self, expert contributors define the construct and its critical roles in both individual and collective identity and functioning. The book examines commonly-used measures for assessing clarity, particularly in relation to the more widely understood concept of self-esteem, with recommendations for best practices in assessment. In addition, a wealth of current data highlights the links between self-concept clarity and major areas of mental wellness and dysfunction, from adaptation and leadership to body image issues and schizophrenia. Along the way, it outlines important future directions in research on self-concept clarity. Included in the coverage: Situating self-concept clarity in the landscape of personality. Development of self-concept clarity across the lifespan. Self-concept clarity and romantic relationships. Who am I and why does it matter? Linking personal identity and self-concept clarity. Consequences of self-concept clarity for well-being and motivation. Self-concept clarity and psychopathology. Self-Concept Clarity fills varied theoretical, empirical, and practical needs across mental health fields, and will enhance the work of academics, psychologists interested in the construct as an area of research, and clinicians working with clients struggling with developing and improving their self-concept clarity.

Breaking the Mishap Chain Peter W. Merlin,Gregg A. Bendrick,National Aeronautics and Space Administration, This volume contains a collection of case studies of mishaps involving experimental aircraft, aerospace vehicles, and spacecraft in which human factors played a significant role. In all cases the engineers involved, the leaders and managers, and the operators (i.e., pilots and astronauts) were supremely qualified and by all accounts superior performers. Such accidents and incidents rarely resulted from a single cause but were the outcome of a chain of events in which altering at least one element might have prevented disaster. As such, this work is most certainly not an anthology of blame. It is offered as a learning tool so that future organizations, programs, and projects may not be destined to repeat the mistakes of the past. These lessons were learned at high material and personal costs and should not be lost to the pages of history.

Varshney,Mahendar Thudi,Fred Muehlbauer,2018-01-02 This book sheds new light on the chickpea genome sequencing and resequencing of chickpea germplasm lines and provides insights into classical genetics, cytogenetics, and trait mapping. It also offers an overview of the latest advances in genome sequencing and analysis. The growing human population, rapid climate changes and limited amounts of arable land are creating substantial challenges in connection with the availability and affordability of nutritious food for smallholder farmers in developing countries. In this context, climate smart crops are essential to alleviating the hunger of the millions of poor and undernourished people living in developing countries. In addition to cereals, grain legumes are an integral part of the human diet and provide sustainable income for smallholder farmers in the arid and semi-arid regions of the world. Among grain legumes, the chickpea (*Cicer arietinum*) is the second most important in terms of production and productivity. Besides being a rich source of proteins, it can fix atmospheric nitrogen through symbiosis with rhizobia and increase the input of combined nitrogen. Several abiotic stresses like drought, heat, salinity, together with biotic stresses like Fusarium wilt, Ascochyta blight, and Botrytis grey mould have led to production losses, as the chickpeas is typically grown in the harsh climates of our planet's semi-arid regions.
