The DVD Revolution Aaron Barlow, 2004-12-30 The introduction of the DVD marked the beginning of one of history's most successful technological innovations, and capped a 75-year development of home-viewing possibilities. Never before have film fans had access in their living rooms to something so remarkably close to the theatrical experience. In addition, because a DVD can hold much more than a single movie, it has allowed films to be marketed with a variety of extras, sparking both a new packaging industry and greater interest on the part of home viewers. This book provides an examination of the DVD's impact, both on home viewing and on film study. From film fan culture through filmmaker commentaries, from special editions to a look at where the format will go from here, author Aaron Barlow offers the first-ever exploration of this explosive new entertainment phenomenon. As the DVD becomes the popular vehicle of record for films, it is also becoming a unique and unprecedented way for the interested viewer to learn more about filmmaking than has ever been possible before. Because of its ability to reproduce the dimensions and quality of the celluloid image, film fans and scholars can have practically perfect reproductions of classic and contemporary films at their disposal. Not only will this book be of interest to the burgeoning population of DVD fans and collectors, but it will provide insights that should be of interest to both students of popular culture and of film.

Film and Television After DVD James Bennett, Tom Brown, 2008-06-30 Heralded as the most significant invention [for film] since the coming of sound (The Observer 2003), by 2005 DVD players were in approximately 84 million homes in the US, making it the fastest selling item in history of US consumer electronics market (McDonald 2007: 135). This book examines the phenomenal growth of DVDs in relation to the cultures, economies, texts, audiences and histories of film, television and new media. *Film and Television After DVD* brings together a group of internationally renowned scholars to provide the first focused academic inquiry into this important technology. The book picks up on key issues within contemporary media studies, making a particularly significant contribution to debates about convergence and interactivity in the digital media landscape. Essays consider DVD as a technology that exists outside the boundaries of new and old media, examining its place within longer histories of home film cultures and production practices of the film and television industries, whilst also critically evaluating what is genuinely new about digital media technologies. From DVDs to downloading, peer-to-peer networking and HD-DVD, this book speaks of the rapidly evolving digital mediascape. Ultimately, *Film and Television After DVD* is a book that considers the convergence of film, television and new media and their academic disciplines through the DVD as a distinct cultural object, pointing to persistent questions in the study of audiovisual culture that will remain intriguing long after the shelf-life of the DVD itself.

Life Cycle Impact Assessment Michael Z. Hauschild, Mark A.J. Huijbregts, 2015-03-24 This book offers a detailed presentation of the principles and practice of life cycle impact assessment. As a volume of the LCA compendium, the book is structured according to the LCIA framework developed by the International Organisation for Standardisation (ISO) passing through the phases of definition or selection of impact categories, category indicators and characterisation models (Classification); calculation of category indicator results (Characterisation); calculating the magnitude of category indicator results relative to reference information (Normalisation); and converting indicator results of different impact categories by using numerical factors based on value-choices (Weighting). Chapter one offers a historical overview of the development of life cycle impact assessment and presents the boundary conditions and the general principles and constraints of characterisation modelling in LCA. The second chapter outlines the considerations underlying the selection of impact categories and the classification or assignment of inventory flows into these categories. Chapters three through thirteen explore all the impact categories that are commonly included in LCIA, discussing the characteristics of each followed by a review of midpoint and endpoint characterisation methods, metrics, uncertainties and new developments, and a discussion of research needs. Chapter-length treatment is accorded to Climate Change; Stratospheric Ozone Depletion; Human Toxicity; Particulate Matter Formation; Photochemical Ozone Formation; Ecotoxicity; Acidification; Eutrophication; Land Use; Water Use; and Abiotic Resource Use. The final two chapters map out the optional LCIA steps of Normalisation and Weighting.
