Micro- and Nanofluidics for Bionanoparticle Analysis Yong Zeng,Xuanhong Cheng,2019 Bionanoparticles such as microorganisms and exosomes are recognized as important targets for clinical applications, food safety, and environmental monitoring. Other nanoscale biological particles, including liposomes, micelles, and functionalized polymeric particles are widely used in nanomedicines. The recent development of microfluidic and nanofluidic technologies has enabled the separation and analysis of these species in a lab-on-a-chip platform, while there are still many challenges to address before these analytical tools can be adopted in practice. For example, the complex matrices within which these species reside in create a high background for their detection. Their small dimension and often low concentration demand creative strategies to amplify the sensing signal and enhance the detection speed. This Special Issue aims to recruit recent discoveries and developments of micro- and nanofluidic strategies for the processing and analysis of biological nanoparticles. The collection of papers will hopefully bring out more innovative ideas and fundamental insights to overcome the hurdles faced in the separation and detection of bionanoparticles.

Software Takes Command Lev Manovich,2013-07-04 Offers the first look at the aesthetics of contemporary design from the theoretical perspectives of media theory and 'software studies'.

Terminology on Statistical Metadata United Nations. Statistical Commission,United Nations. Economic Commission for Europe,Conference of European Statisticians,2000 This publication was prepared at the request of countries participating in the activities on statistical metadata organised

by the United Nations/ Economic Commission for Europe Statistical Division. The aim of the publication is to assist national and international statistical offices on problems dealing with the development and implementation of statistical metainformation systems. The development of standard terminology will also help to facilitate access, sharing, comparing and understanding of statistics across national boundaries. Over 230 terms are defined relating to: metadata collection; storing, organising and searching metadata; metadata and metainformation system's functions (identification, location, retrieval, processing, analysis and interpretation); metadata models and holdings; metadata administration and dissemination. Concepts are defined in natural language and are organised in the thesaurus structure.

Neural Prostheses for Restoration of Sensory and Motor Function John K. Chapin, Karen A. Moxon, 2000-09-27 The prospect of interfacing the nervous system with electronic devices to stimulate or record from neural tissue suggests numerous possibilities in the field of neuroprosthetics. While the creation of a six million dollar man may still be far into the future, neural prostheses are rapidly becoming viable theories for a broad range of patients with

Biomedical Nanostructures Kenneth Gonsalves, Craig Halberstadt, Cato T. Laurencin, Lakshmi Nair, 2007-11-09 Learn to Use Nanoscale Materials to Design Novel Biomedical Devices and Applications Discover how to take full advantage of nanoscale materials in the design and fabrication of leading-edge biomedical devices. The authors introduce you to a variety of possible clinical applications such as drug delivery, diagnostics, and cancer therapy. In addition, the authors explore the interface between micron and nanoscale

materials for the development of applications such as tissue engineering. Finally, they examine the mechanisms of cell interactions with material surfaces through the use of nanotechnology-based material processing and characterization methods. The text's three sections highlight its interdisciplinary approach: * Part One: Nanostructure Fabrication * Part Two: Bio-Nano Interfaces * Part Three: Clinical Applications of Nanostructures Among the key topics covered are nanotechnology in tissue regeneration; biomolecular engineering; receptor-ligand interactions; cell-biomaterial interactions; nanomaterials in diagnostics, drug delivery, and cancer therapy; and nano- and micron-level engineering and fabrication. Throughout the text, clear examples guide you through the chemistry and the processing involved in designing and developing nanoscale materials for biomedical devices. Each chapter begins with an introduction and ends with a conclusion highlighting the key points. In addition, references at the end of the chapter help you expand your research on any individual topic. In summary, this book helps biomedical researchers and engineers understand the physical phenomena that occur at the nanoscale in order to design novel cell-based constructs for a wide range of applications.

The War of the Soups and the Sparks Elliot S. Valenstein, 2005-07-15 Like the cracking of the genetic code and the creation of the atomic bomb, the discovery of how the brain's neurons work is one of the fundamental scientific developments of the twentieth century. The discovery of neurotransmitters revolutionized the way we think about the brain and what it means to be human yet few people know how they were discovered, the scientists involved, or the fierce controversy about whether they even existed. The War of the Soups and the Sparks tells the saga of the dispute

between the pharmacologists, who had uncovered the first evidence that nerves communicate by releasing chemicals, and the neurophysiologists, experts on the nervous system, who dismissed the evidence and remained committed to electrical explanations. The protagonists of this story are Otto Loewi and Henry Dale, who received Nobel Prizes for their work, and Walter Cannon, who would have shared the prize with them if he had not been persuaded to adopt a controversial theory (how that happened is an important part of this history). Valenstein sets his story of scientific discovery against the backdrop of two world wars and examines the fascinating lives of several scientists whose work was affected by the social and political events of their time. He recounts such stories as Loewi's arrest by Nazi storm troopers and Dale's efforts at helping key scientists escape Germany. *The War of the Soups and the Sparks* reveals how science and scientists work. Valenstein describes the observations and experiments that led to the discovery of neurotransmitters and sheds light on what determines whether a novel concept will gain acceptance among the scientific community. His work also explains the immense importance of Loewi, Dale, and Cannon's achievements in our understanding of the human brain and the way mental illnesses are conceptualized and treated.

Heterogeneous Catalysis for Energy Applications Tomas R Reina, Jose A Odriozola, 2020-08-27 Heterogeneous catalysis plays a central role in the global energy paradigm, with practically all energy-related process relying on a catalyst at a certain point. The application of heterogeneous catalysts will be of paramount importance to achieve the transition towards low carbon and sustainable societies. This book provides an overview of the design, limitations and challenges of heterogeneous catalysts for energy

applications. In an attempt to cover a broad spectrum of scenarios, the book considers traditional processes linked to fossil fuels such as reforming and hydrocracking, as well as catalysis for sustainable energy applications such as hydrogen production, photocatalysis, biomass upgrading and conversion of CO₂ to clean fuels. Novel approaches in catalysts design are covered, including microchannel reactors and structured catalysts, catalytic membranes and ionic liquids. With contributions from leaders in the field, *Heterogeneous Catalysis for Energy Applications* will be an essential toolkit for chemists, physicists, chemical engineers and industrials working on energy.

Uninhabited Air Vehicles National Research Council, Commission on Engineering and Technical Systems, Aeronautics and Space Engineering Board, National Materials Advisory Board, Committee on Materials, Structures, and Aeronautics for Advanced Uninhabited Air Vehicles, 2000-06-28 U.S. Air Force (USAF) planners have envisioned that uninhabited air vehicles (UAVs), working in concert with inhabited vehicles, will become an integral part of the future force structure. Current plans are based on the premise that UAVs have the potential to augment, or even replace, inhabited aircraft in a variety of missions. However, UAV technologies must be better understood before they will be accepted as an alternative to inhabited aircraft on the battlefield. The U.S. Air Force Office of Scientific Research (AFOSR) requested that the National Research Council, through the National Materials Advisory Board and the Aeronautics and Space Engineering Board, identify long-term research opportunities for supporting the development of technologies for UAVs. The objectives of the study were to identify technological developments that would improve the performance and reliability of generation-after-next UAVs at lower cost and to recommend areas of fundamental research in materials, structures, and aeronautical technologies. The study focused on innovations in technology that would leapfrog current technology development and would be ready for scaling-up in the post-2010 time frame (i.e., ready for use on aircraft by 2025).

The Urban Image of Augustan Rome Diane Favro, 1998-09-28 *The Urban Image of Augustan Rome* examines the idea and experience of the ancient city at a

critical moment, when Rome became an Imperial capital. Lacking dignity, unity, and a clear image during the Republic, the urban image of Rome became focused under the control of Augustus, who transformed the city physically and conceptually. This book explores for the first time the motives for urban intervention, methods for implementation and the socio-political context of the Augustan period, as well as broader design issues such as formal urban strategies and definitions of urban imagery.

Molecular Modeling of Nucleic Acids Neocles B. Leontis, 1998 Covering numerous topics in modeling nucleic acids, this volume looks at the role of various spectroscopic methods, simulations of molecular dynamics using particle mesh methods, and dynamic and genetic algorithms for predicting RNA secondary structure. It also covers the thermodynamics of nucleic acid folding and three-dimensional structure prediction based on sequence information.

Nonparametric Tests for Complete Data Vilijandas Bagdonavicius, Julius Kruopis, Mikhail S. Nikulin, 2013-02-04 This book concerns testing hypotheses in non-parametric models. Classical non-parametric tests (goodness-of-fit, homogeneity, randomness, independence) of complete data are considered. Most of the test results are proved and real applications are illustrated using examples. Theories and exercises are provided. The incorrect use of many tests applying most statistical software is highlighted and discussed.

Monumentality and the Roman Empire Edmund Thomas, 2007-11-15 'Monumentality and the Roman Age' presents a study of the concept of monumentality in classical antiquity, asks what it is that the notion encompasses and how significant it was for the Romans themselves in moulding their individual or collective aspirations and identities.
