Author, Subject, and Object Indexes Astronomisches Recheninstitut,2013-11-11 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics, and their border fields. It is devoted to the recording, summarizing, and indexing of relevant publications throughout the world. Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen-Institut under the auspices of the International Astronomical Union. Volume 59/60 - the fifth Cumulative Index of Astronomy and Astrophysics Abstracts - comprises author, subject, and object indexes to volumes 49 - 58. Thus, the astronomical and astrophysical literature of the five-year period 1989 - 1993 is covered by this volume.

The Dynamics of European Security Cooperation, 1945-91 Gülnur Aybet,2016-01-12 This is the first integrated analysis of all aspects of security cooperation in western Europe from 1945 to 1991. It provides an accessible yet sophisticated survey of the wider dynamics of security cooperation in each decade throughout this period. It covers all aspects of security cooperation, which range from the political - such as a 'European' voice in arms control, to military - such as a 'European' input into NATO strategy, and economic - involving collaboration in defence technology and production.

Parallel Computational Fluid Dynamics '91 K. G. Reinsch,1992 Parallel CFD is an emerging field at the forefront of computing. It is now used for design and analysis purposes in several aerospace companies. This book is a collection of articles, describing the state of the art of Parallel Computational Fluid Dynamics. Algorithms and results for realistic applications in both compressible and incompressible flow are described covering shared memory systems as well as MIMD and SIMD architectures. In addition, recommendations are presented for parallelization of large fluid dynamics codes on massively parallel systems. The special issues of load balancing and communication for CFD codes are also addressed.

Nonlinear Control Systems and Power System Dynamics Qiang Lu,Yuanzhang Sun,Shengwei Mei,2013-04-17 Nonlinear Control Systems and Power System Dynamics presents a comprehensive description of nonlinear control of electric power systems using nonlinear control theory, which is developed by the differential geometric approach and nonlinear robust control method. This book explains in detail the concepts, theorems and algorithms in nonlinear control theory, illustrated by step-by-step examples. In addition, all the mathematical formulation involved in deriving the nonlinear control laws of power systems are sufficiently presented. Considerations and cautions involved in applying nonlinear control theory to practical engineering control designs are discussed and special attention is given to the implementation of nonlinear control laws using microprocessors. Nonlinear Control Systems and Power System Dynamics serves as a text for advanced level

courses and is an excellent reference for engineers and researchers who are interested in the application of modern nonlinear control theory to practical engineering control designs.

Fluid-Structure Interactions Michael P.

Paidoussis,1998-10-12 This volume emphasizes the fundamentals and mechanisms giving rise to flow-induced vibration of use to researchers, designers, and operators. Fluid Structure Interactions provides useful problem-solving tools, and conveys the ideas in a physically comprehensible manner. The book includes a complete bibliography of important work in the field. . The Non-linear behaviour of Fluid-Structure interactions . The possible existence of chaotic oscillations . The use of this area as a model to demonstrate new mathematical techniques This book will prove invaluable to researchers, practitioners, and students in fluid-structure interactions, flow-induced vibrations, and dynamics and vibrations.

Financial Assets, Debt and Liquidity Crises Matthieu Charpe, Carl Chiarella, Peter Flaschel, Willi Semmler, 2011-07-21 The macroeconomic development of most major industrial economies is characterised by boom-

bust cycles. Normally such boom-bust cycles are driven by specific sectors of the economy. In the financial meltdown of the years 2007–9 it was the credit sector and the real-estate sector that were the main driving forces. This book takes on the challenge of interpreting and modelling this meltdown. In doing so it revives the traditional Keynesian approach to the financial-real economy interaction and the business cycle, extending it in several important ways. In particular, it adopts the Keynesian view of a hierarchy of markets and introduces a detailed financial sector into the traditional Keynesian framework. The approach of the book goes beyond the currently dominant paradigm based on the representative agent, market clearing and rational economic agents. Instead it proposes an economy populated with heterogeneous, rationally bounded agents attempting to cope with disequilibria in various markets.
