Web Engineering David Lowe, Martin Gaedke, 2011-04-06 Over the last few years Web Engineering has begun to gain mainstream acceptance within the software engineering, IT and related disciplines. In particular, both researchers and practitioners are increasingly recognizing the unique characteristics of Web systems, and what these characteristics imply in terms of the approaches we take to Web systems development and deployment in practice. A scan of the publications in related conference proceedings and journals highlights the diversity of the discipline areas which contribute to both the richness and the complexity of Web Engineering. The 5th International Conference on Web Engineering (ICWE2005), held in Sydney, Australia, extends the traditions established by the earlier conferences in the series: ICWE2004 in Munich, Germany; ICWE2003 in Oviedo, Spain; ICWE2002 in Santa Fe, Argentina; and ICWE2001 in Cáceres, Spain. Not only have these conferences helped disseminate cutting edge research within the field of Web Engineering, but they have also helped define and shape the discipline itself. The program we have put together for ICWE2005 continues this evolution. Indeed, we can now begin to see the maturing of the field. For possibly the first time, there was very little debate within the Program Committee about which papers were in and out of scope, and much more debate as to the each papers contributions to the field.

Sources for the History of Medicine in Late Medieval England Carole Rawcliffe, 1996-05-01
The material contained here derives from a wide variety of printed and manuscript sources, chosen to give some idea of the rich diversity of evidence available to the historian of English medicine and its place in society during the fourteenth, fifteenth, and early sixteenth centuries. Latin and French have been translated into modern English, while vernacular texts have been slightly modified, and obsolete or difficult words explained. Middle English has otherwise been retained to give the past an authentic voice and to emphasize the similarities as well as the differences between the experience of modern readers and that of the inhabitants of late medieval England

Ensuring Safe Foods and Medical Products Through Stronger Regulatory Systems Abroad Institute of Medicine, Board on Health Sciences Policy, Board on Global Health, Committee on Strengthening Core Elements of Food and Drug Regulatory Systems in Developing Countries, 2012-09-03 A very high portion of the seafood we eat comes from abroad, mainly from China and Southeast Asia, and most of the active ingredients in medicines we take originate in other countries. Many low- and middle-income countries have lower labor costs and fewer and less stringent environmental regulations than the United States, making them attractive places to produce food and chemical ingredients for export. *Safe Foods and Medical Products Through Stronger Regulatory Systems Abroad* explains that the diversity and scale of imports makes it impractical for U.S. Food and Drug Administration (FDA) border inspections to be sufficient to ensure product purity and safety, and incidents such as American deaths due to adulterated heparin imported from China propelled the problem into public awareness. The Institute of Medicine Committee on Strengthening Core Elements of Regulatory Systems in Developing Countries took up the vital task of helping the FDA to cope with the reality that so much of the food, drugs, biologics, and medical products consumed in the United States originate in countries with less-robust regulatory systems. *Ensuring Safe Foods and Medical Products Through Stronger Regulatory Systems Abroad* describes the ways the United States can help strengthen regulatory systems in low and middle income countries and promote cross-border partnerships - including government,

industry, and academia - to foster regulatory science and build a core of regulatory professionals. This report also emphasizes an array of practical approaches to ensure sound regulatory practices in today's interconnected world.

African Interventionist States Roy May, Oliver Furley, 2017-10-05 This title was first published in 2002: Examining the recent phenomenon in conflicts in Africa, this text addresses situations where African states and African military intervene in conflicts either in neighbouring states or beyond. While this trend has been widely observed, this is the first in-depth research that deals with such issues. It breaks new ground in identifying the key issues, actors and actions, and includes analysis of military capacities of African states and the way in which armies are used, including the increasing role of private security companies and mercenaries. The changing attitudes among members of the OAU are examined, in particular the increasing acceptance of interventionism and the blurring of boundaries. The most significant cases of intervention are examined together with less well-documented examples such as Lesotho and Guinea Bissau. This engaging account makes for a compelling resource for academics and practitioners alike.
