Analysis and Simulation of Heterostructure Devices Vassil Palankovski, Rüdiger Quay, 2012-12-06 The topic of this monograph is the physical modeling of heterostructure devices. A detailed discussion of physical models and parameters for compound semiconductors is presented including the relevant aspects of modern submicron heterostructure devices. More than 25 simulation examples for different types of Si(Ge)-based, GaAs-based, InP-based, and GaN-based heterostructure bipolar transistors (HBTs) and high electron mobility transistors (HEMTs) are given in comparison with experimental data from state-of-the-art devices.

Cable TV Robert W. Crandall, Harold Furchtgott-Roth, 2010-12-01 In 1984, Congress simultaneously eliminated state-local regulation of cable television rates and banned telephone companies from offering cable service in their own franchise areas. Five years later, the General Accounting Office discovered that basic cable rates had risen more than four times as rapidly as the overall consumer price level since rate deregulation. As a result, Congress began to move to reimpose cable rate regulation once again, finally succeeding (over President Bush's veto) in 1992. In this book, Robert Crandall and

Harold Furchtgott-Roth examine the case of reregulating cable television and find that viewers gained far more than they lost during the brief deregulatory era because cable services expanded so rapidly in the deregulated environment. Moreover, they show that new technologies, such as direct-broadcast satellites, are likely to provide considerable market discipline for cable operators in the next few years, weakening any case for rate regulation. Given regulation's history of impeding innovation, they conclude that economic welfare is more likely to be enhanced by policies aimed at encouraging new entry into video services than by rate regulation.

Principles of Meteoritics E.L. Krinov, 2013-10-22 Principles of Meteoritics examines the significance of meteorites in relation to cosmogony and to the origin of the planetary system. The book discusses the science of meteoritics and the sources of meteorites. Scientists study the morphology of meteorites to determine their motion in the atmosphere. The scope of such study includes all forms of meteorites, the circumstances of their fall to earth, their motion in the atmosphere, and their orbits in space. Meteoric bodies vary in sizes; in calculating their motion in interplanetary space, astronomers apply the laws of Kepler. In the region of retardation, the direction of motion of the meteoric body changes, and a break in the visible and real trajectories follows. The angle of fall of meteorites at a vertical line on the surface of the Earth measures between 20 degrees to 30 degrees. The text also discusses the Tunguska and Sikhote-alin meteorites, two gigantic meteorites that fell in the U.S.S.R. The text also discusses the chemistry, the mineralogy, the petrography, and the physical properties of meteorites. The book is suitable for astronomers, geologists, and general readers who have an interest in sky watching.

Sequence Analysis Primer Michael Ray Gribskov, John Devereux, 1994 Computerized sequence analysis is an integral part of biotechnological research, yet many biologists have received no

formal training in this important technology. Sequence Analysis Primer offers the beginner the necessary background to enter this vital field and helps more seasoned researchers to fine-tune their approach. It covers basic data manipulation such as homology searches, stem-loop identification, and protein secondary structure prediction, and is compatible with most sequence analysis programs. A detailed example giving steps for characterizing a new gene sequence provides users with hands-on experience when combined with their current software. The book will be invaluable to researchers and students in molecular biology, genetics, biochemistry, microbiology, and biotechnology.

Basement Tectonics 10 Richard W. Ojakangas, Albert Binkley Dickas, Albert B. Dickas, John C. Green, 1995-03-31 This volume presents contributions resulting from the Tenth International Basement Tectonics Conference, held in Duluth, Minnesota, USA in August 1992. The first three parts -- the Rift Systems, Basement Control on Younger Structures, and Shear Zones -- not only treat the geology of North America, but also the geology of other regions. Abstracts are summarized in Part IV.

The Economics of a Disaster Bruce M. Owen, 1995-10-20 The Economics of a Disaster represents a major contribution to the understanding of the economics of liability and damages. It is based on the assumption that if people know they can be held responsible for some or all of the costs or damages sustained in an environmental accident, they will change their behavior to make the accident less likely to occur or to reduce the damages should it occur. The work develops a framework to examine and measure changes in market conditions after a disaster, showing the kinds of information that need to be collected and analyzed. Based on the Exxon Valdez case, this work provides an interesting framework for practitioners, specialists, and scholars in the fields of business, economics, law, and environmental studies.
