Critical Infrastructure Protection in Homeland Security Ted G. Lewis,2014-10-13 ...excellent for use as a text in information assurance or cyber-security courses...I strongly advocate that professors...examine this book with the intention of using it in their programs. (Computing Reviews.com, March 22, 2007) The book is written as a student textbook, but it should be equally valuable for current practitioners...this book is a very worthwhile investment. (Homeland Security Watch, August 17, 2006) While the emphasis is on the development of policies that lead to successful prevention of terrorist attacks on the nation's infrastructure, this book is the first scientific study of critical infrastructures and their protection. The book models the nation's most valuable physical assets and infrastructure sectors as networks of nodes and links. It then analyzes the network to identify vulnerabilities and risks in the sector combining network science, complexity theory, modeling and simulation, and risk analysis. The most critical components become the focus of deeper analysis and protection. This approach reduces the complex problem of protecting water supplies, energy pipelines, telecommunication stations, Internet and Web networks, and power grids to a much simpler problem of protecting a few critical nodes.

The new edition incorporates a broader selection of ideas and sectors and moves the mathematical topics into several appendices.

Computer Networks Andrew S. Tanenbaum,Nickolas Feamster,2019-02

Wetherall,2013-07-23 Appropriate for Computer Networking or Introduction to Networking courses at both the undergraduate and graduate level in Computer Science, Electrical Engineering, CIS, MIS, and Business Departments. Tanenbaum takes a structured approach to explaining how networks work from the inside out. He starts with an explanation of the physical layer of networking, computer hardware and transmission systems; then works his way up to network applications. When East Meets West Fran Blumberg,2008-12-18 The impetus for this book was a series of guest lectures for the "Issues in Applied Cognition" Institute sponsored by Fordham University's Graduate School of Education May 26-27, 2005 and convened at Fordham University in New York City and May 30-June 7, 2005 at The Beijing Center for Language and Culture in Beijing. The book

that has since emerged is designed to serve as a reference that brings together theoretical perspectives, research findings, and cultural practice in the examination of media from a primarily Sino-American vantage point, as commented upon by Chinese, U.S., and U.K. researchers and practitioners. The need for such a reference is prompted by China's status as a nascent superpower and the ramifications of that emerging status for collaborative ventures and exchange of information with the U.S. Clearly, one flourishing context in which this "sharing" will occur is media. The goal of this volume is to provide the basis for consideration of the theoretical and practical issues that both China and the United States media will encounter as they move toward greater economic and political interdependence. This discussion is approached through the lens of media practice, research, and education and includes the voices of media market researchers, journalists and editors, developers of children's educational programs, and academicians. Collectively, the chapters offer a select set of snapshots of how media in China and the U.S. look at one point in time. This moment is one that includes China preparing for the Beijing 2008 Olympics and the U.S. grappling with its involvement in an unpopular war. However, these images may capture what

has been referred to in photojournalism as a "decisive moment" in the fledgling media interdependency between the U.S. and China.

The Branding of the American Mind Jacob H. Rooksby,2016-12-01 The first real exposé of how universities have trademarked, copyrighted, branded, and patented everything they do. Universities generate an enormous amount of intellectual property, including copyrights, trademarks, patents, Internet domain names, and even trade secrets. Until recently, universities often ceded ownership of this property to the faculty member or student who created or discovered it in the course of their research. Increasingly, though, universities have become protective of this property, claiming it for their own use and licensing it as a revenue

source instead of allowing it to remain in the public sphere. Many universities now behave like private corporations, suing to protect trademarked sports logos, patents, and name brands. Yet how can private rights accumulation and enforcement further the public interest in higher education? What is to be gained and lost as institutions become more guarded and contentious in their orientation toward intellectual property? In this pioneering book, law professor Jacob H. Rooksby uses a mixture of qualitative, quantitative, and legal research methods to grapple with those central questions, exposing and critiquing the industry's unquestioned and growing embrace of intellectual property from the perspective of research in law, higher education, and the social sciences. While knowledge creation and dissemination have a long history in higher education, using intellectual property as a vehicle for rights staking and enforcement is a relatively new and, as Rooksby argues, dangerous phenomenon for the sector. The Branding of the American Mind points to higher education's love affair with intellectual property itself, in all its dimensions, including newer forms that are less tied to scholarly output. The result is an unwelcome assault on the public's interest in higher education. Presuming no background knowledge of intellectual property, and

ending with a call to action, The Branding of the American Mind explores applicable laws, legal regimes, and precedent in plain English, making the book appealing to anyone concerned for the future of higher education.
