Learning AV Foundation Bob McCune, 2014 The massive success of apps like Instagram, iMovie, and Vine proves that users want tools to help them capture, edit, and share their lives. If you want to build those apps for iOS or OS X, you need to understand Apple's most powerful media framework: AV Foundation. Until now, however, this meant wrestling with Apple's massive, out-of-date API documentation. Now, there's a more productive and efficient alternative. Learning AV Foundation helps you gain real-world mastery by teaching each aspect of the framework in the context of building real world applications. By the time you finish, you'll have built a voice memo app, custom video player, video editor, and an image and video camera app -- and you'll have mastered all the techniques you need to write your own advanced media apps with AV Foundation. Most chapters contain additional optional exercises, to help you

further deepen your understanding. Learning AV Foundation comes with a complete collection of starter apps that abstract away visual aspects, so you can focus solely on AV Foundation without getting bogged down in supporting infrastructure. Coverage includes: Understanding the AV Foundation media environment ; Basic techniques for working with media: playback, recording, and more ; Basic and advanced media capture ; Media creation and editing: composing media, mixing audio, creating video transitions, and layering animated content ; Advanced topics, including real-time audio and video effects ; Integrating AV Foundation with Core Audio.

International agri-food chains and networks Jos Bijman,Onno Omta,Jacques Trienekens,Jo Wijnands,Emiel Wubben,2023-08-28 This book brings together a rich collection of material on management and organization in agri-food chains and networks. Producers, processors, traders and retailers of agricultural and food products operate in an economic and institutional environment that is increasingly dominated by global developments. Therefore, organizing efficient and effective supply chains as well as managing collaboration among participating firms requires an international perspective. This book presents theoretical and practical insights from many different parts of the world. Topics covered include classical supply chain management issues like logistics, information exchange (e.g. tracking and tracing), quality control, safety assurance, and chain performance. Other timely issues covered are joint innovation, and shared responsibility for sustainability in agri-food supply chains. Special attention is given to issues of governance and organization of chains and networks, for example, by focussing on the role of producer organisations (such as farmer cooperatives) in their effort to combine horizontal and vertical collaboration in the international supply chain. This book is relevant for both academics and managers interested in the latest advances in research on management and organization of international agri-food chains and networks.
