**100 Words To Make You Sound Smart** American Heritage Dictionaries,2006-10-04 Find the right words to make a point, seal the deal, or just keep folks listening! Chosen by the editors of the American Heritage Dictionaries, these words can help anyone who wants to be a more compelling communicator—as a worker, consumer, advocate, friend, dinner companion, or even romantic prospect. The book includes a colorful variety of words, including handy words of just one syllable (such as glib) and words derived from the names of famous people (such as Freudian slip and Machiavellian). There are expressions from popular culture (Catch-22) and words that date back to classical civilization (spartan and stoic). Each word is clearly defined and shown in context with quotations from magazines, newspapers, broadcast media, movies, and television. For many words, quotations from distinguished authors and speakers are also given and word histories are explained. 100 Words to Make You Sound Smart provides an enjoyable way to communicate more effectively, distinctively, and articulately.

**Pray for a Brave Heart** Helen Macinnes,2013-01-08 It was 1953, and nothing could shake William Denning's resolve to leave the army and return to the States. Nothing, except one of the largest diamond hauls ever - which, in the wrong hands, on the wrong side of the Iron Curtain, was a potentially lethal force. In a small village in the Swiss mountains, Denning discovered that there was not only a jewellery robbery at stake. In the ruthless world of espionage and international conspiracy his adversaries were the most unlikely people - and the most dangerous.

**Special Relativity and Motions Faster than Light** Moses Fayngold,2008-09-08 While the theory of special relativity is often associated with the idea of traveling

faster than light, this book shows that in all these cases subtle forces of nature conspire to prevent these motions being harnessed to send signals faster than the speed of light. The author tackles these topics both conceptually, with minimal or no mathematics, and quantitatively, making use of numerous illustrations to clarify the discussion. The result is a joy to read for both scientists familiar with the subject and laypeople wishing to understand something of special relativity.

Theoretical Optics Hartmann Römer, 2006-03-06

Starting from basic electrodynamics, this volume provides a solid, yet concise introduction to theoretical optics, containing topics such as nonlinear optics, light-matter interaction, and modern topics in quantum optics, including entanglement, cryptography, and quantum computation. The author, with many years of experience in teaching and research, goes way beyond the scope of traditional lectures, enabling readers to keep up with the current state of knowledge. Both content and presentation make it essential reading for graduate and PhD students as well as a valuable reference for researchers.

**Mathematical Models of Fluid Dynamics** Rainer

Ansorge, 2006-03-06 This introduction to the field contains a careful selection of topics and examples without sacrificing scientific strictness. The author guides readers through mathematical modelling, the theoretical treatment of the underlying physical laws and the construction and effective use of numerical procedures to describe the behaviour of the dynamics of physical flow. Both students and experts intending to control or predict the behavior of fluid flows by theoretical and computational fluid dynamics will benefit from the combination of all relevant aspects in one handy volume. The book consists of three main parts: - The design of mathematical models of physical fluid flow; -

A theoretical treatment of the equations representing the model, as Navier-Stokes, Euler, and boundary layer equations, models of turbulence, in order to gain qualitative as well as quantitative insights into the processes of flow events; - The construction and effective use of numerical procedures in order to find quantitative descriptions of concrete physical or technical fluid flow situations. This is the first text of its kind to merge all these subjects so thoroughly.
